Real problems
Our solutions

Who are we?

We are Lab387 - a digital laboratory for web, design and education guided by experiences, knowledge and practice from the real, business, world.

We work as a team and test every problem until we come up with a solution that is tailored just for you - our client.

We don't deal much with the theory because only innovative solutions for our clients can bring different and better results that are recognized.

If you find it unusual and interesting, we believe that you are one of those people who want to move forward.

What do we do?

Our focus is on working with clients who have unusual and challenging problems, and whose solution we can see through some kind of innovative website or web application.

With graphic design we solve creative problems whether it is a complete branding or UX / UI design that will help us make better websites.

Education is something that has our special attention and we have selflessly passed on our knowledge to many real people who make money from the web today. We are especially proud of our Lab387 apprentice that over 20 diligent and dear people have experienced.

With whom do we work?

We love different challenges, and we mostly work with clients who are part of our team - they get involved, share their experiences and problems and work with us on their solutions. We know this is the only way to get the best results.

We do not work without a detailed analysis and agreement of both parties, we don't work without contracts and invoices, we don't work for free and without an advance. This way, we are all safe and we know that the result will be fantastic - confirmed by many years of experience.

If you think alike you should review our portfolio to check out our expertise. We have no doubt that the next email / message / call will be from you to solve your problems together.

Setup and Maintenance

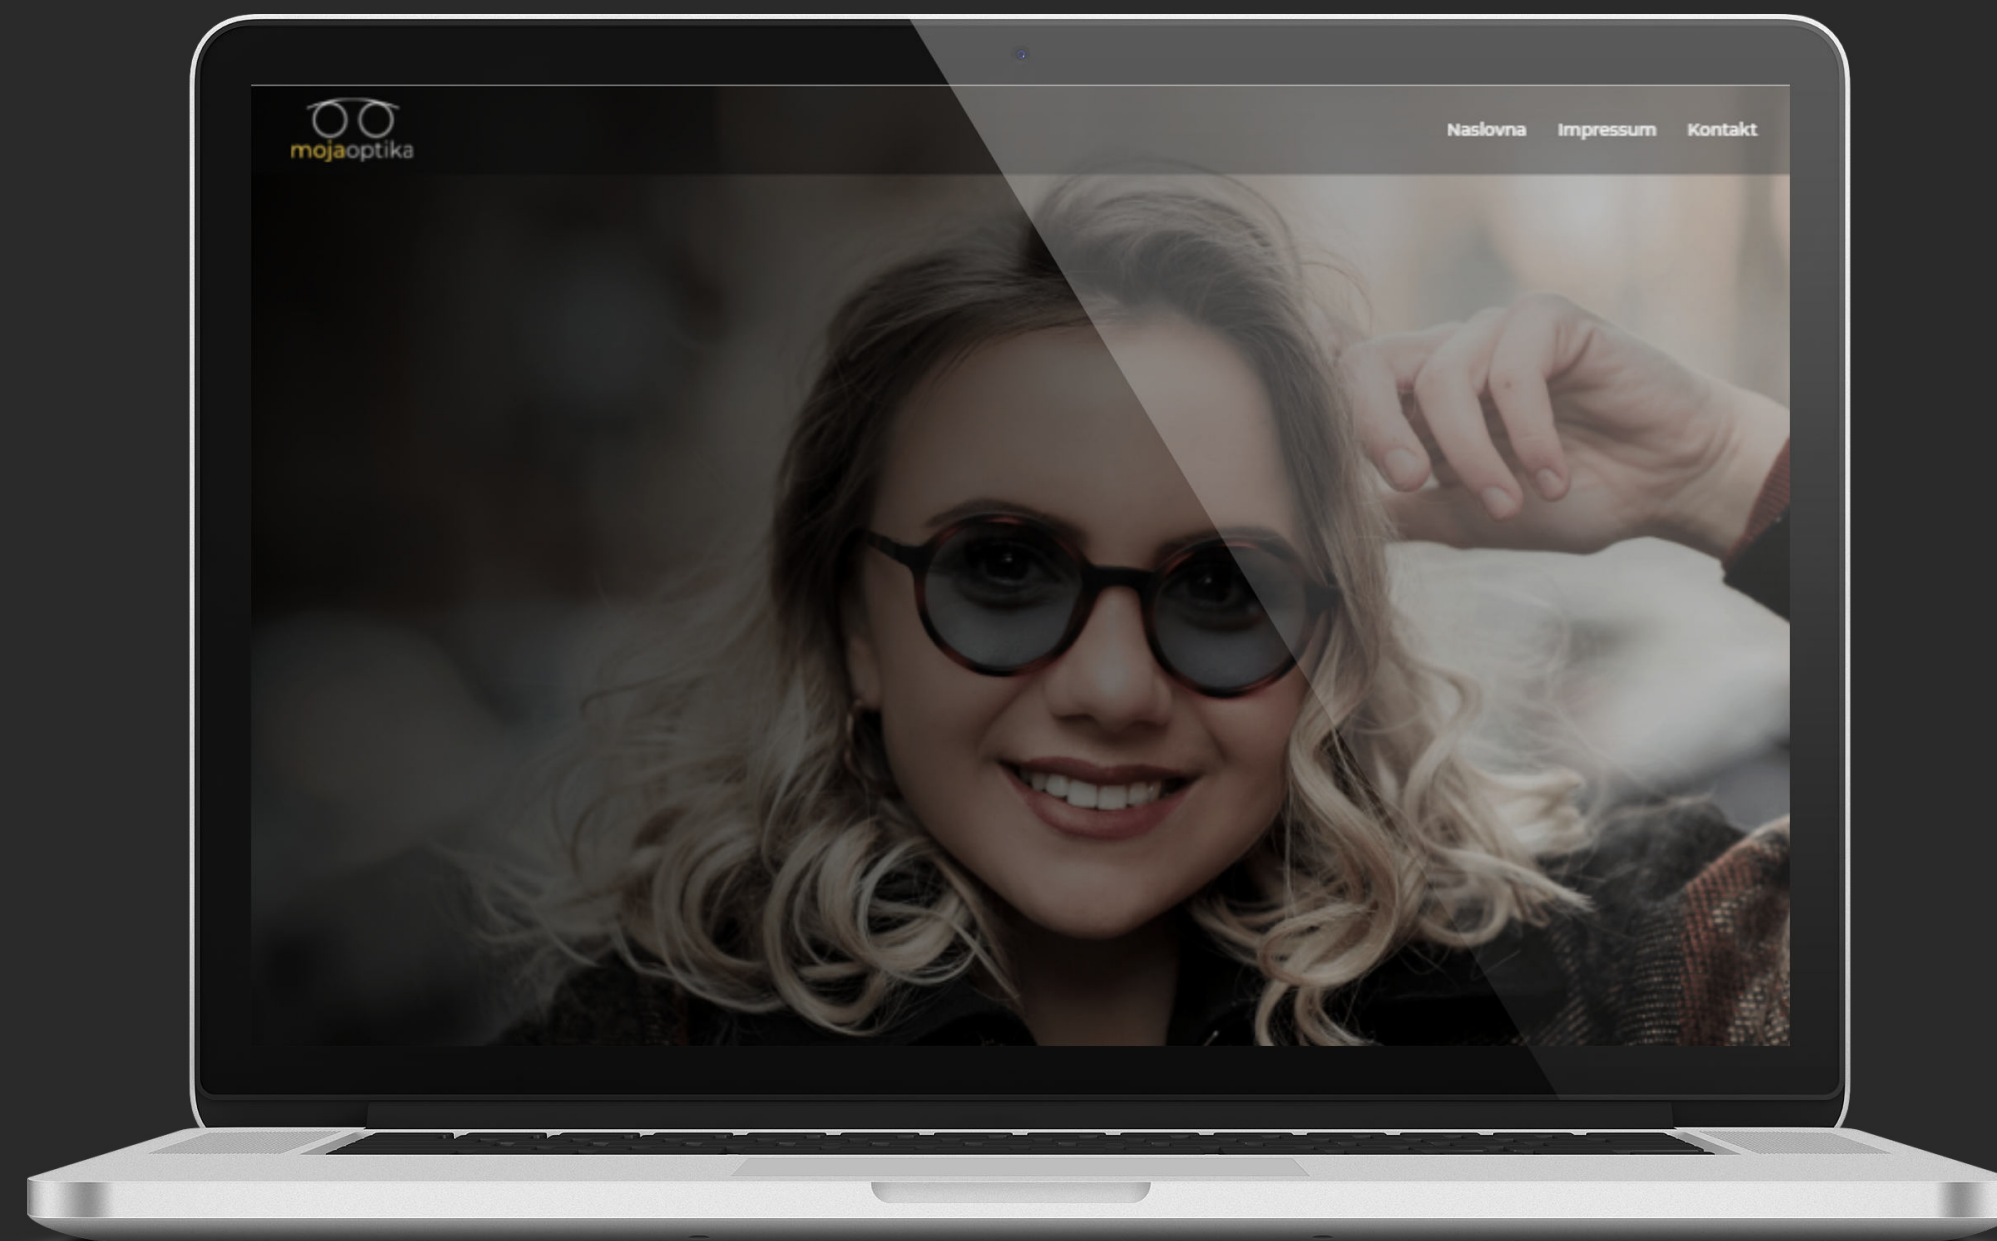

Web Design

Below this text, you can see the websites we have designed from the scratch and implemented using the [WordPress CMS](#) system. In the implementation, we solved all the problems for the client: we bought and configured hosting and domain, installed and configured the CMS, inserted the design with the content and initially set the website to be very fast and to have permanent backups and protection against various attacks. All pages are customized for display on all mobile devices.

If you are interested in technical things, we have implemented [CDN](#), [Caching](#), [Firewall](#), [2FA](#), [XSS Protection](#), [SQL Injection Protection](#), [Automatic Update](#), [Automatic Full Backup](#), [Remote Storage Backup](#), [Image Optimisation](#), [Database Optimisation](#).

For a certain number of web pages, we have programmed additional functionalities that you can check out within the descriptions of the websites.

Moja Optika

mojaoptika.ba

For this website, we carefully selected and processed photos from the photo shooting session, wrote a copy (text) and then defined and created a structure that will tell a very interesting and unusual story. At the very beginning of the website, we created one small optical illusion to make it even more interesting.

It is told through the relationship of black, white and gray tones with the crystal clear font from the logo, in order to give space to the text and the photos themselves in order to emphasize the importance of good eyesight, but also an important fashion trend.

We colored the important places for the website user yellow from the logo, and with the font size and a slightly larger negative space, we made the complete content look clean and simple.

Through various calls to action within the copy, we encouraged visitors to use the contact information at the bottom of the page.

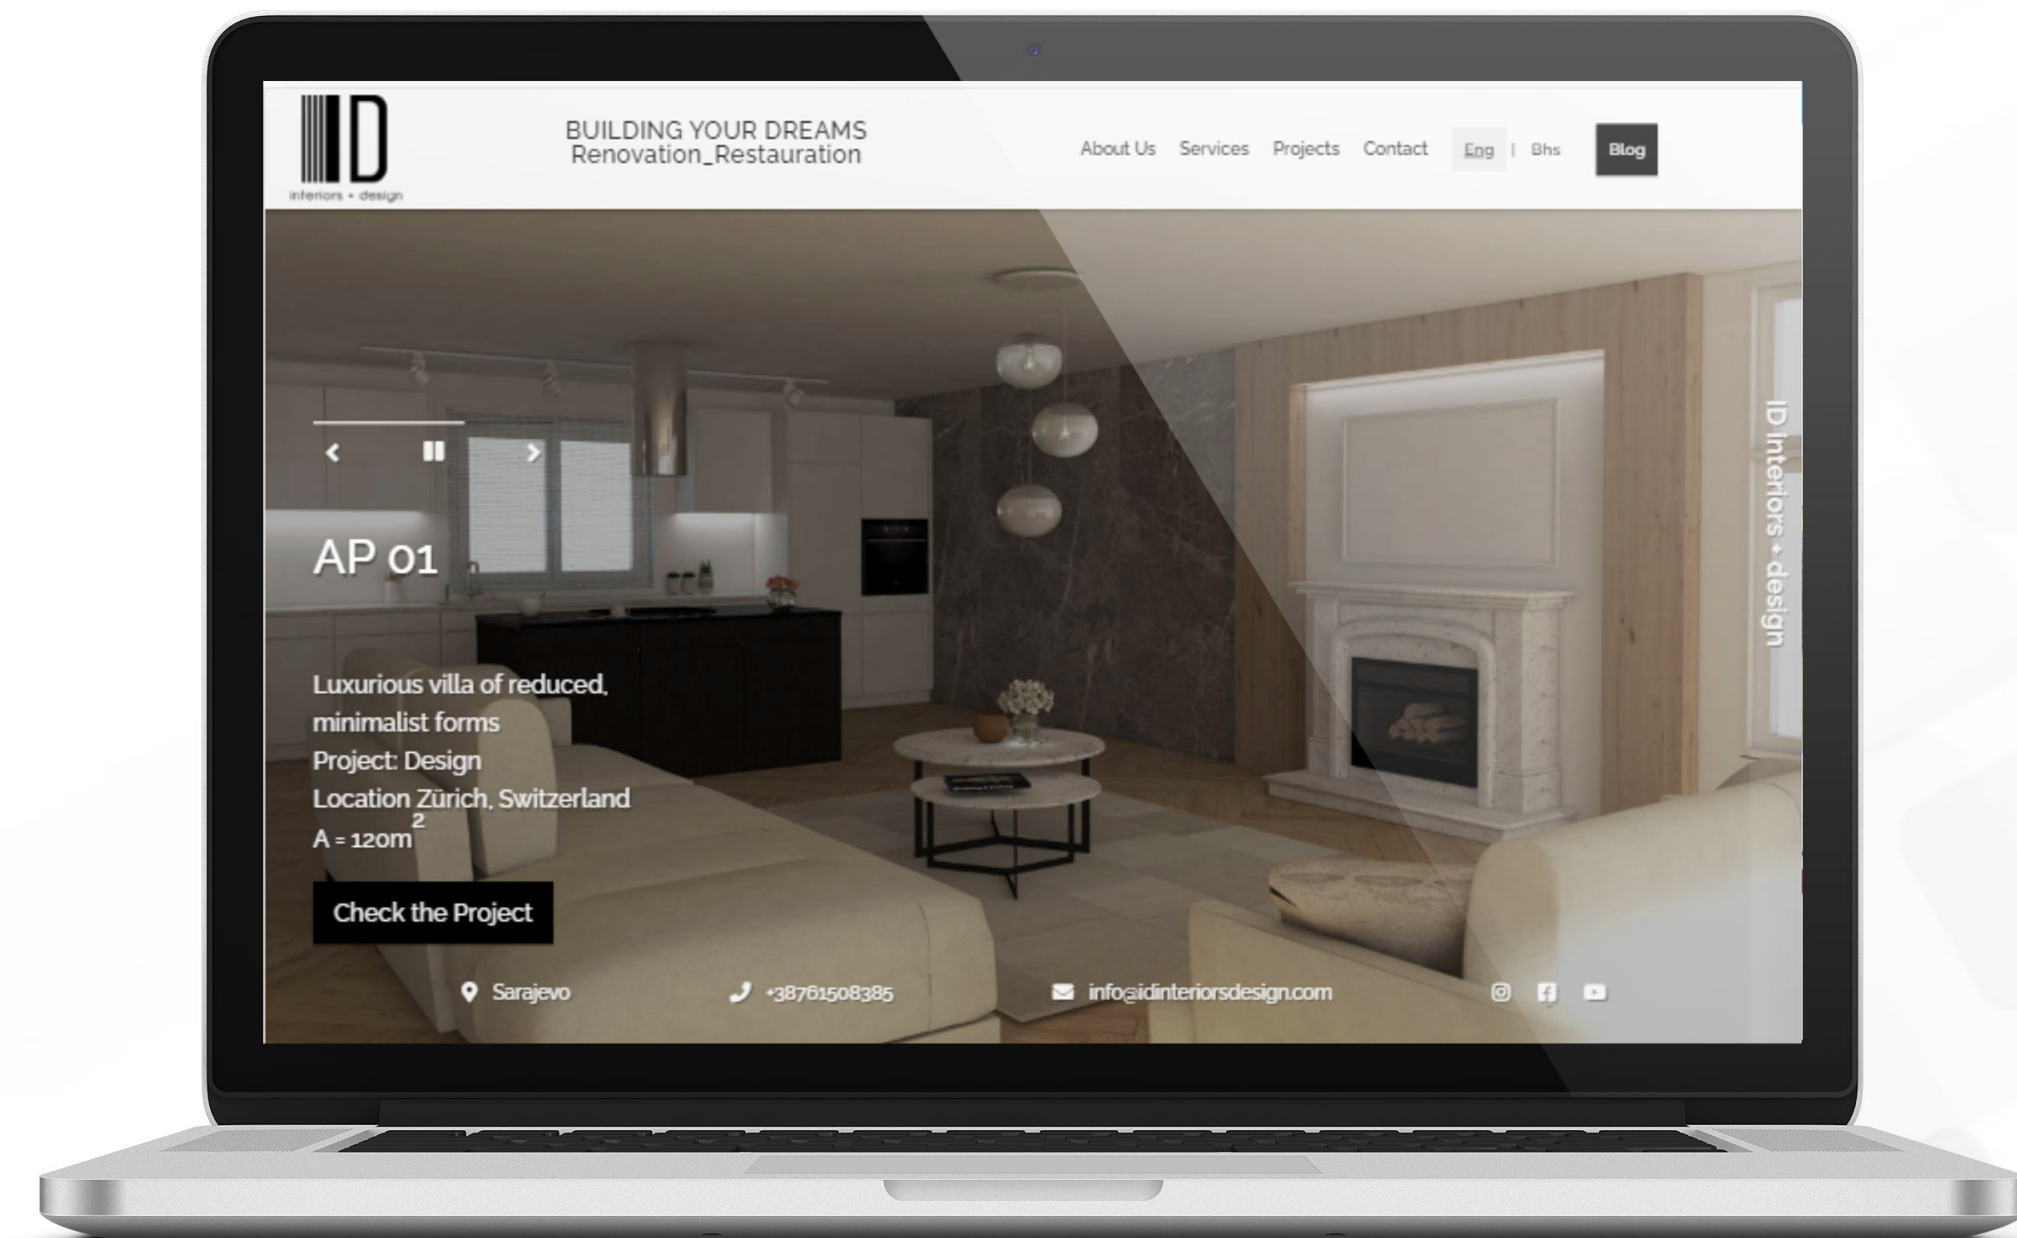

ID Interiors + Design

We have carefully created a modern and dynamic website for our client in order to best present her services and interior design and product design projects.

The base colors are white and dark gray in order to give space to the photos and 3D renders to best represent the works, and different animations and transitions have brought a little bit of exclusivity.

With detailed descriptions of the service package, together with the client, we created an opportunity for everyone to easily find what they need, and then to establish further contact and future cooperation using the contact form and other information.

Also, the website is designed to be multilingual.

idinteriorsdesign.com

Kemal Softić Photography

kemalsoftic.lab387.com

For a client whose work can be found in many publications, including ABC News, Associated Press and Washington Times, we have created a modern and dynamic website in order to present his work - photography.

For the base colors, we chose dark gray and white to highlight the photos and the content. With light brown color and simple animations, transitions and other effects, we marked important places and introduced dynamics and modern design.

In the end, we gave the opportunity to all site visitors to contact our client and develop new cooperation through the social networks and contact form.

We also created the page to be multilingual.

Tehnoelektronik doo

For our long-time and award-winning client, we have carefully created a corporate website with a wealth of content and additional information.

You will find all products with detailed descriptions and information as well as excellent navigation to make it easier for the user to find the perfect product.

The complete text and photo content was transferred from the Daikin price list and catalog, and then stylistically processed. While designing this website, we were guided by simplicity, therefore we have the client's blue color in important places, while white and dark gray predominate. We also chose the Daikin brand font so we would have consistency.

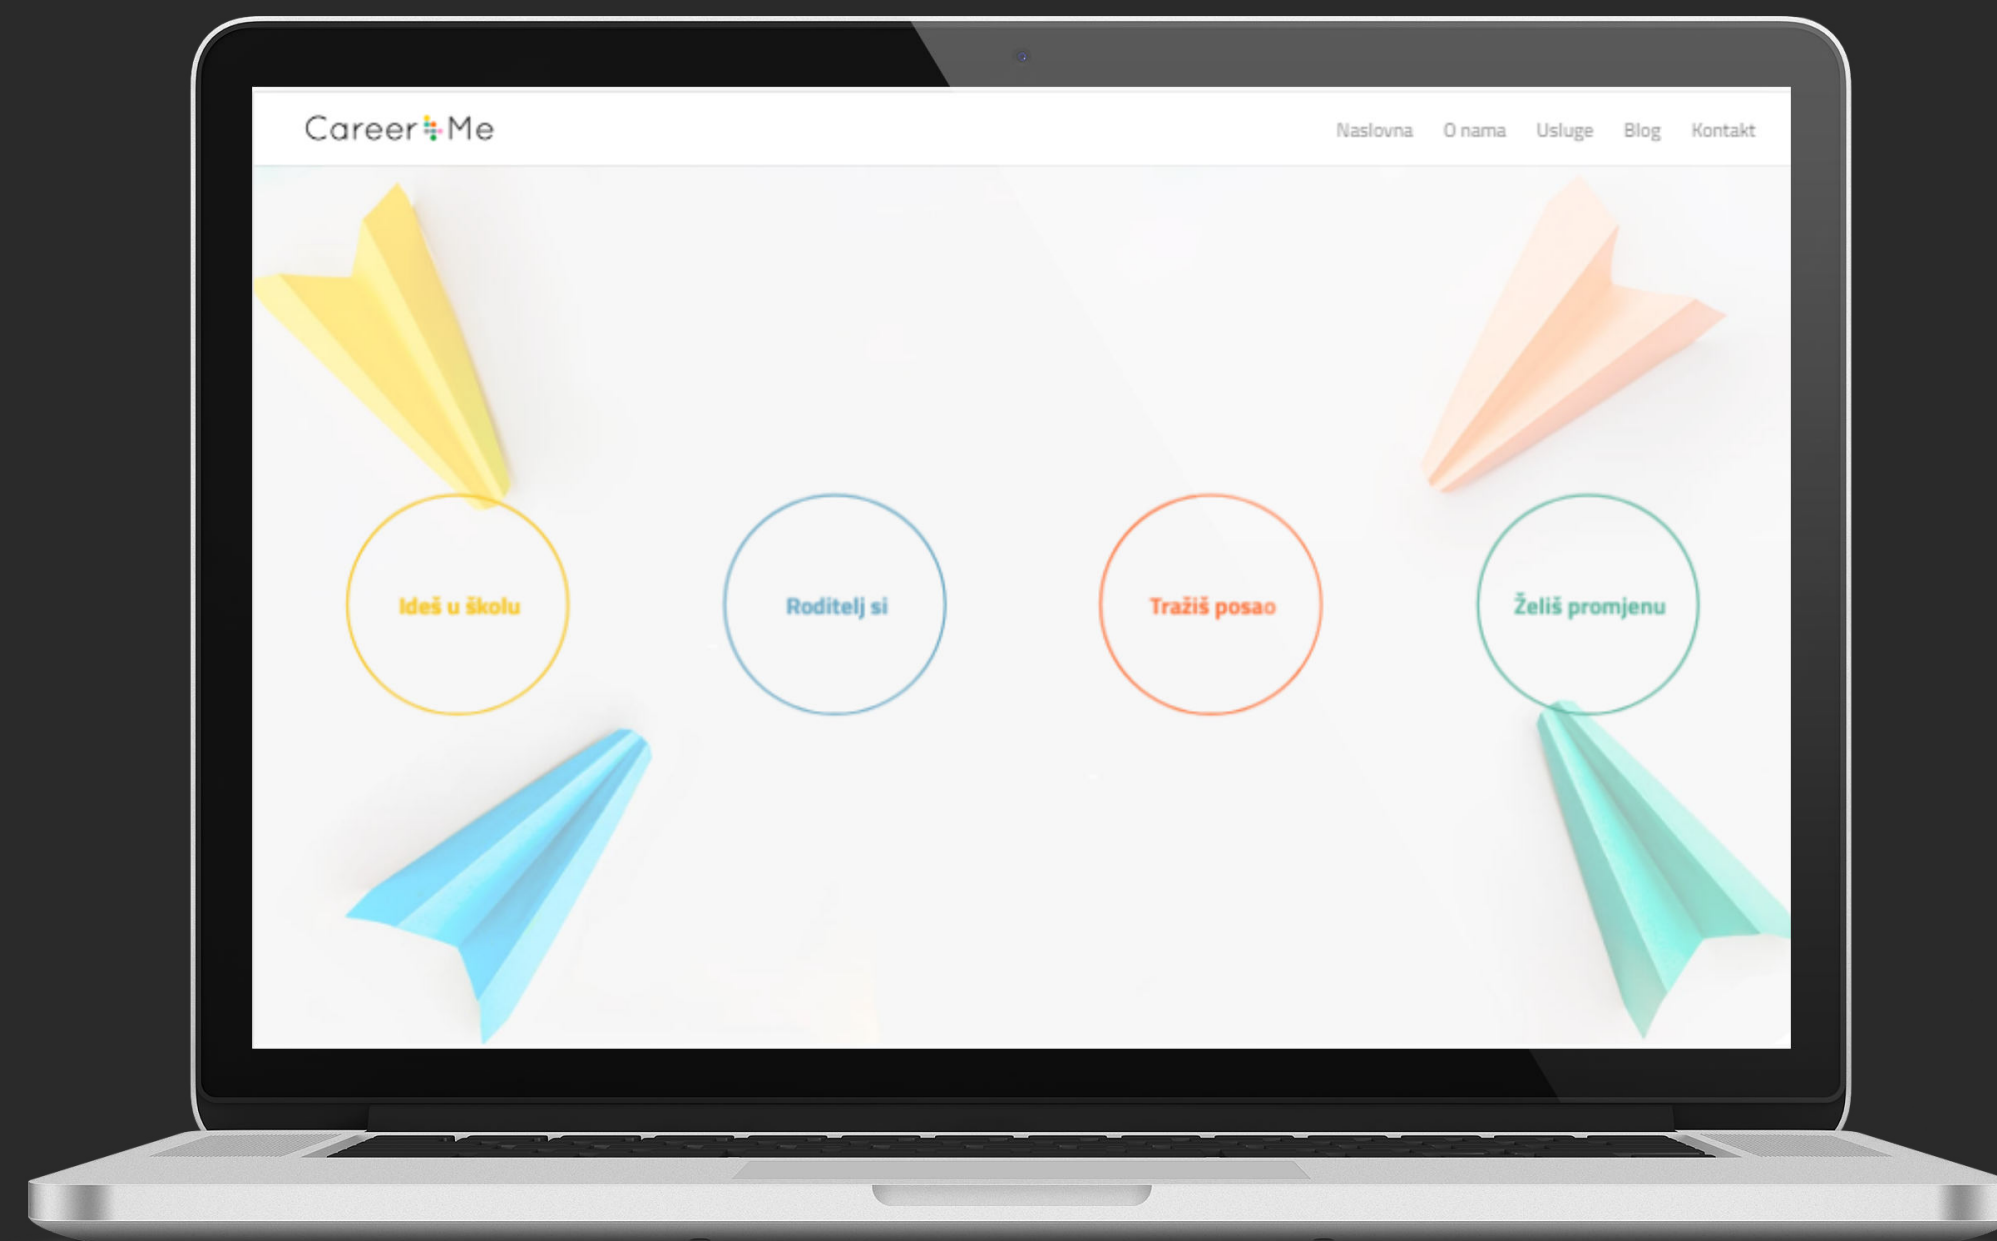

Within the website, we have included a large number of our client's important projects, in order to give visitors greater security in choosing and show the full range of possibilities of the company Tehnoelektronik d.o.o.

Through various calls to action, we encouraged website visitors to further contact with our client and achieve new, potential cooperation.

tehnoelektronik.ba

Carrer4Me

carrer4me.lab387.com

For our client, we created a one-page website with rich content that we decorated with gentle colors selected for the categories of the company's services.

The structure of the website is set up so that each of the visitors can easily select a category and find what is relevant for them.

We highlighted the content with a large font, and using animations, parallax and interactive transitions, we added the dynamics to this website.

By inviting action within each category and putting customized forms, we invited visitors to further contact, but also made it easier for our client to segment the messages from the website.

Hotel Dom Saas-Fee AG

Together with our client we have created an interactive and modern website to present new ideas and projects related to Dom Collection Group and Hotel Dom Saas-Fee AG in Switzerland.

For the basic colors, we chose dark gray and white, while we marked important places within the structure with red.

Using animations, transitions and other techniques, we introduced a dose of exclusivity, especially within the first section of the website. With a branched structure and quality textual and photo content, we provided visitors with all the necessary information about the project. For certain parts of the content, we have created limited access at the client's request.

We also provided visitors with further contact with the company using the contact form and other information.

Created within Dom Collection d.o.o.

Team:

- Amar Bešlija - Developer
- Šejla Bratić - Designer
- Edita Tahtović - Copywriter

dom-project.com

Du Glacier Residence

glacier-project.com

We have created a modern, sales website for our clients with a long tradition in the hotel industry.

For the basic colors we used white and dark gray, while for important places, the appropriate orange color was used.

Within the website, we have created an interactive display of the hotel sketch itself, along with all the basic information about each of the apartments, which are activated by clicking the mouse on PC devices or clicking on mobile devices.

Also, the lock of additional information has been implemented on the site so that the client can gather a list of potential buyers of apartments.

In addition, a contact form has been implemented to invite potential clients to action and further contact

Created within Dom Collection d.o.o..

Team:

- Amar Bešlija - Developer
- Šejla Bratić - Designer
- Edita Tahtović - Copywriter
- Bojan Stojčić - Designer

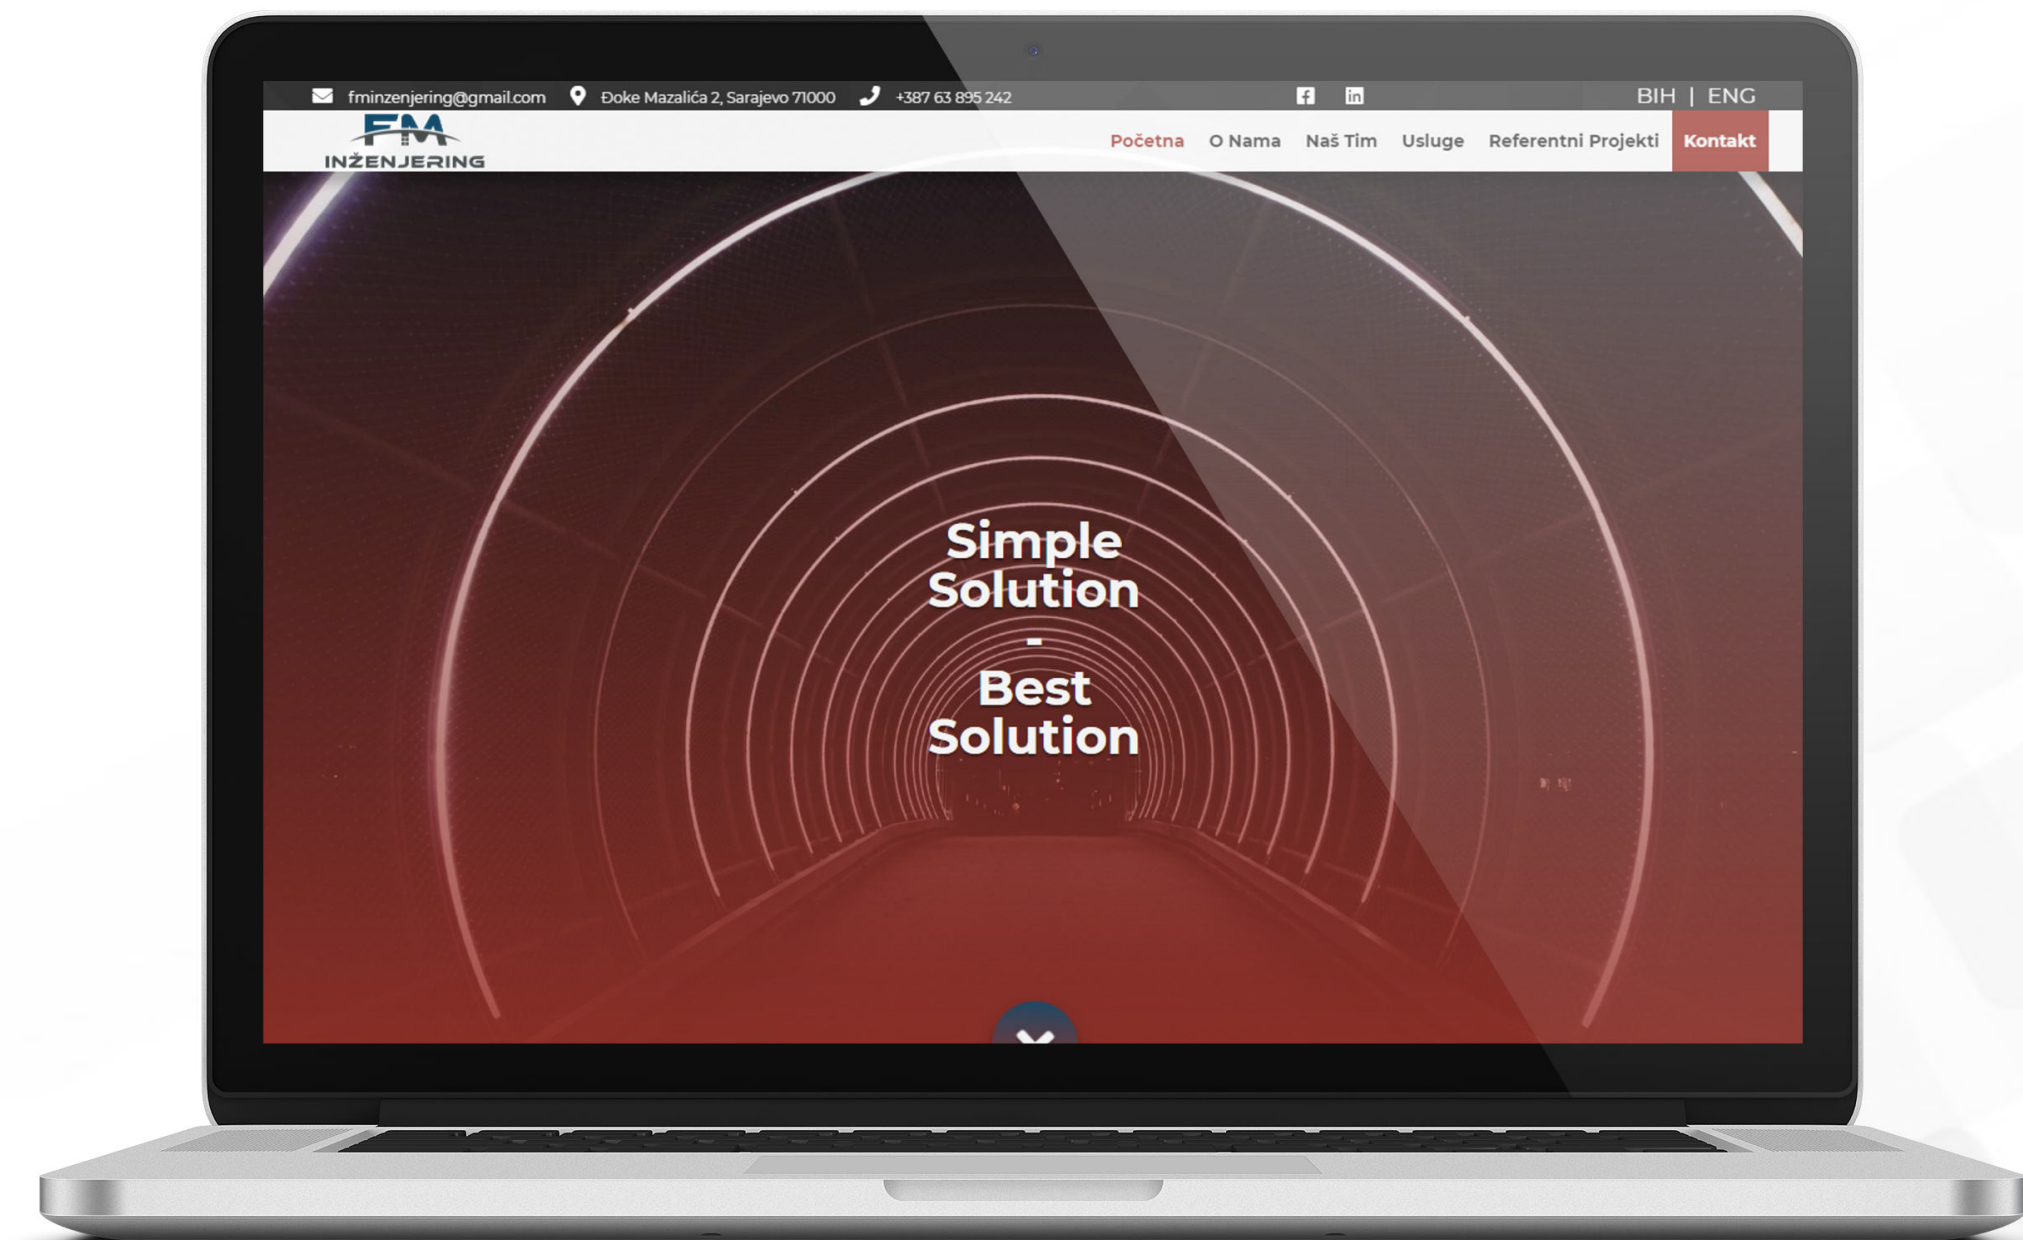

FM Inženjering

We have created a modern and simple website for our client in order to best present his projects and services in the field of engineering. In addition to the blue color from the logo, we also used the red color to create gradients that brought a modern style within the website along with simple animations and transitions.

A convenient and clean font and a very simple structure were chosen to make the content stand out.

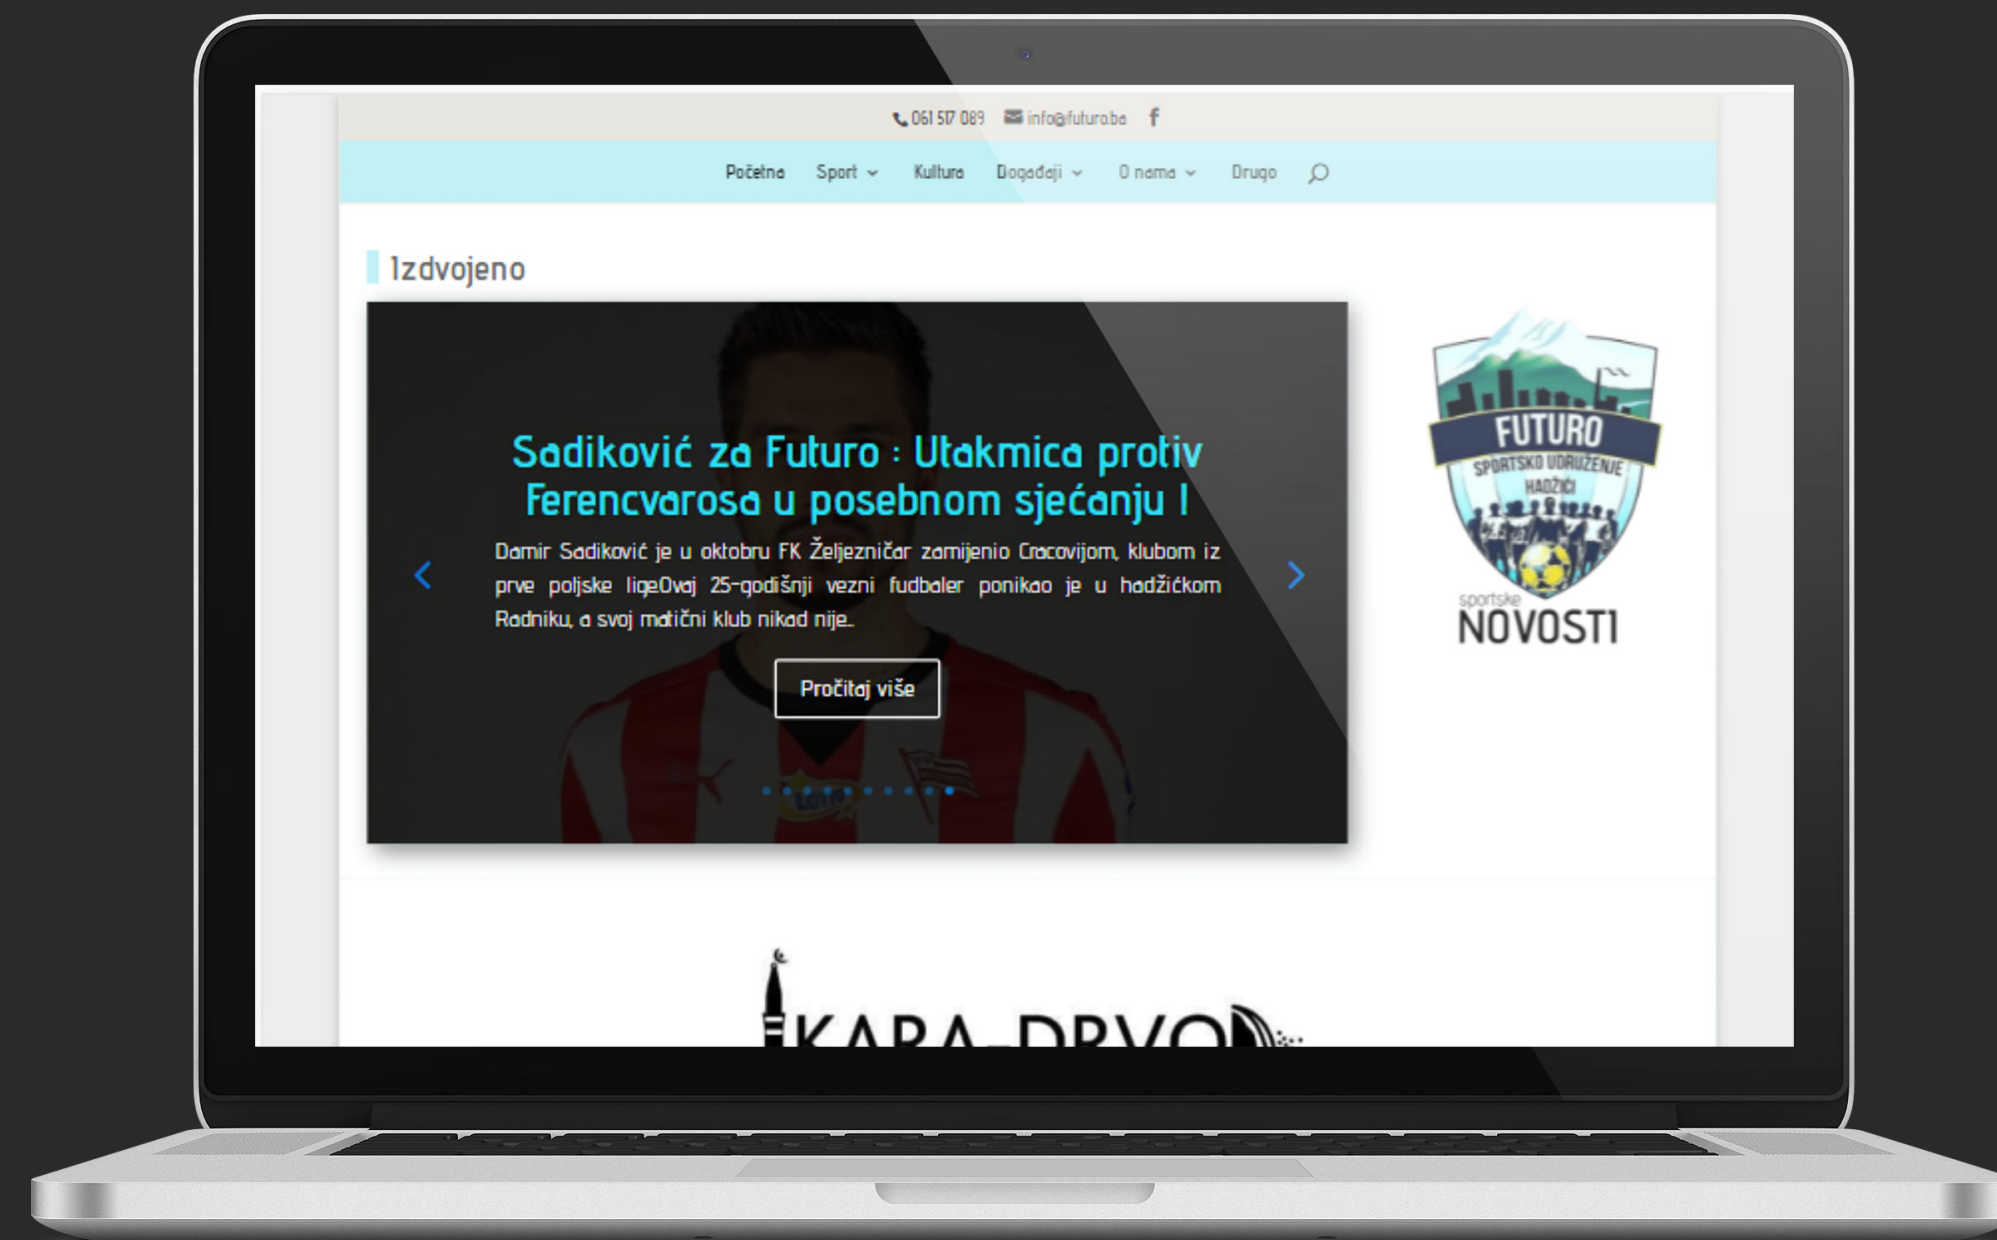

In order to gain the trust of visitors and give them a number of additional information, we created a section for reference projects where we listed all the important projects done so far with important information.

In order to facilitate the eventual contact with the client, we have placed all the important contact information at the top and bottom of the page - social networks, email and phone numbers.

fminzenjering.lab387.com

Portal Futuro

futuro.ba

For our client, the Futuro Sports Association, we have created a sports web portal together with an informative section about the association itself and its projects.

For the main colors of the page, we chose light blue as the carrier of all the essential elements, and we chose a font that completely matches the logo itself.

We have placed the sponsors in strategic places to help our client organize sports tournaments in an easier way.

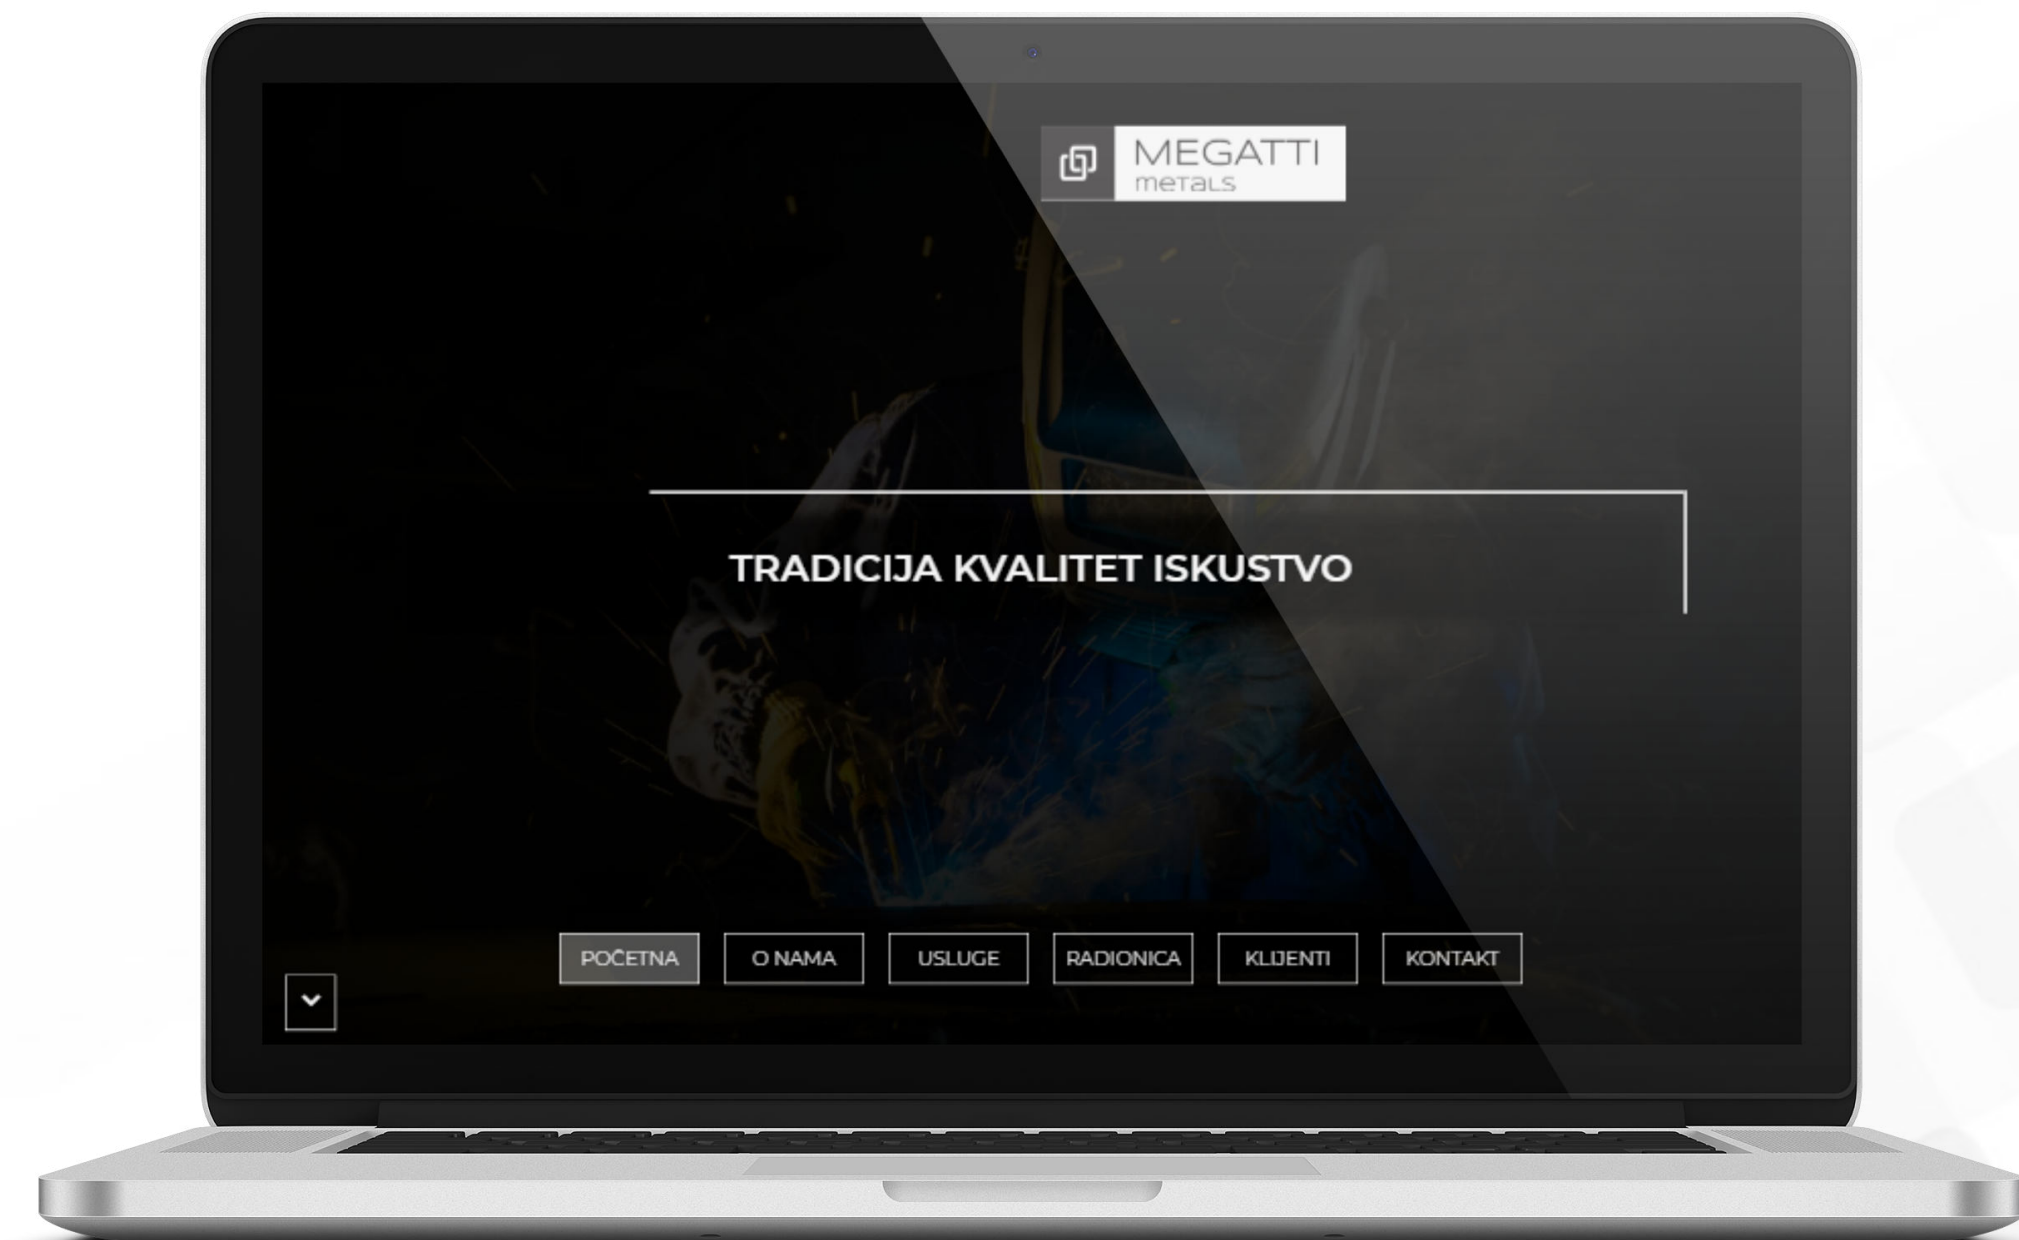

We have inserted simple animations on certain elements in order to give the website a modern look and dynamics.

Megatti Metals

For our clients with a tradition of 40 years, we have created an unusual and modern website to show all their metal services in a new and interesting way.

By using the relationship between dark backgrounds with photos and white content, as well as unusual animations and transitions with a clear and clean font, we have achieved that the entire content stands out and looks modern and dynamic.

We have implemented a contact form along with all the necessary information to give visitors the opportunity to contact our client.

megatti-metals.com

Color Clinic Tattoo Studio

color-clinic.com

We have created a modern, interactive and unusual website for our clients to promote the Color Clinic Tattoo studio in Leipzig. The website itself has experienced many iterations, and the current version uses black and gold as base colors, while the font has been customized to be readable by all visitors.

Certain parts of the website are also dominated by red to highlight certain projects of this studio.

Illustrations have been specially created for the website, which we have incorporated in the form of interactive animations, where the click on them opens modal windows with examples of tattoos. Also, a special plugin has been created for this website so that all tattoo artists, categories and tattoo examples can be managed.

The site is also linked to the kisscal service for managing reservations for tattoos, paying for them and purchasing gift coupons for tattoos. The site has multilingual functionality and is specially optimized for mobile devices.

Created within Dom Collection d.o.o.

Team:

- Amar Bešlija - Developer
- Šejla Bratić - Designer
- Edita Tahtović - Copywriter
- Bojan Stojčić - Designer

Color Clinic Blog

For our client - Color Clinic Tattoo, we have created a modern and clean blog for publishing all interesting articles related to the tattoo industry.

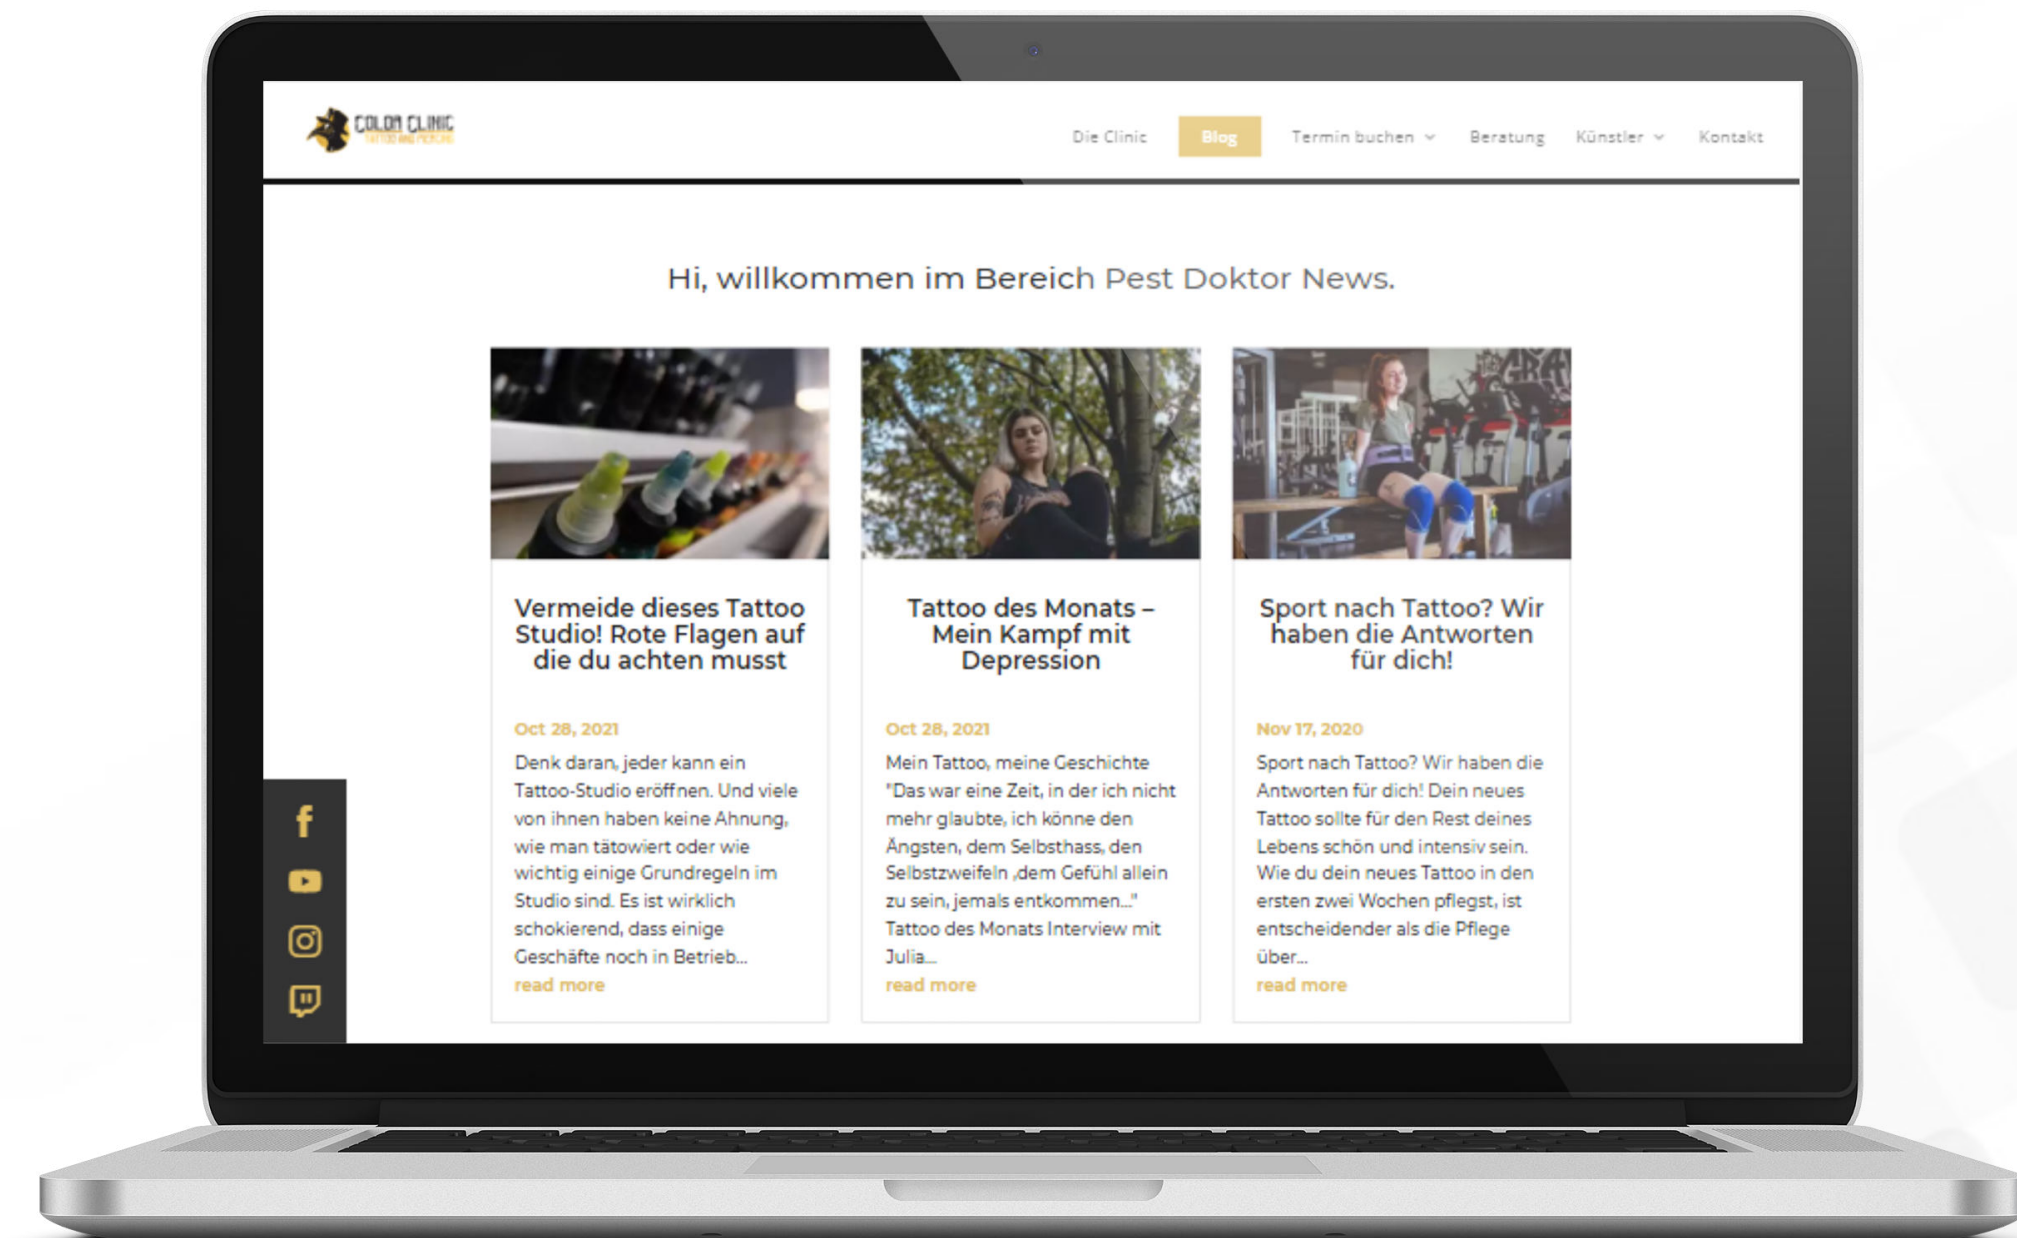

We have linked the blog itself to the main website color-clinic.com, in order to contribute to more visits to the main website.

For the basic colors, we took white and dark gray, and we marked the important places with red, which is the main color of this company. Also, SEO optimization for the site itself and all articles on it has been implemented.

Created within Dom Collection d.o.o.

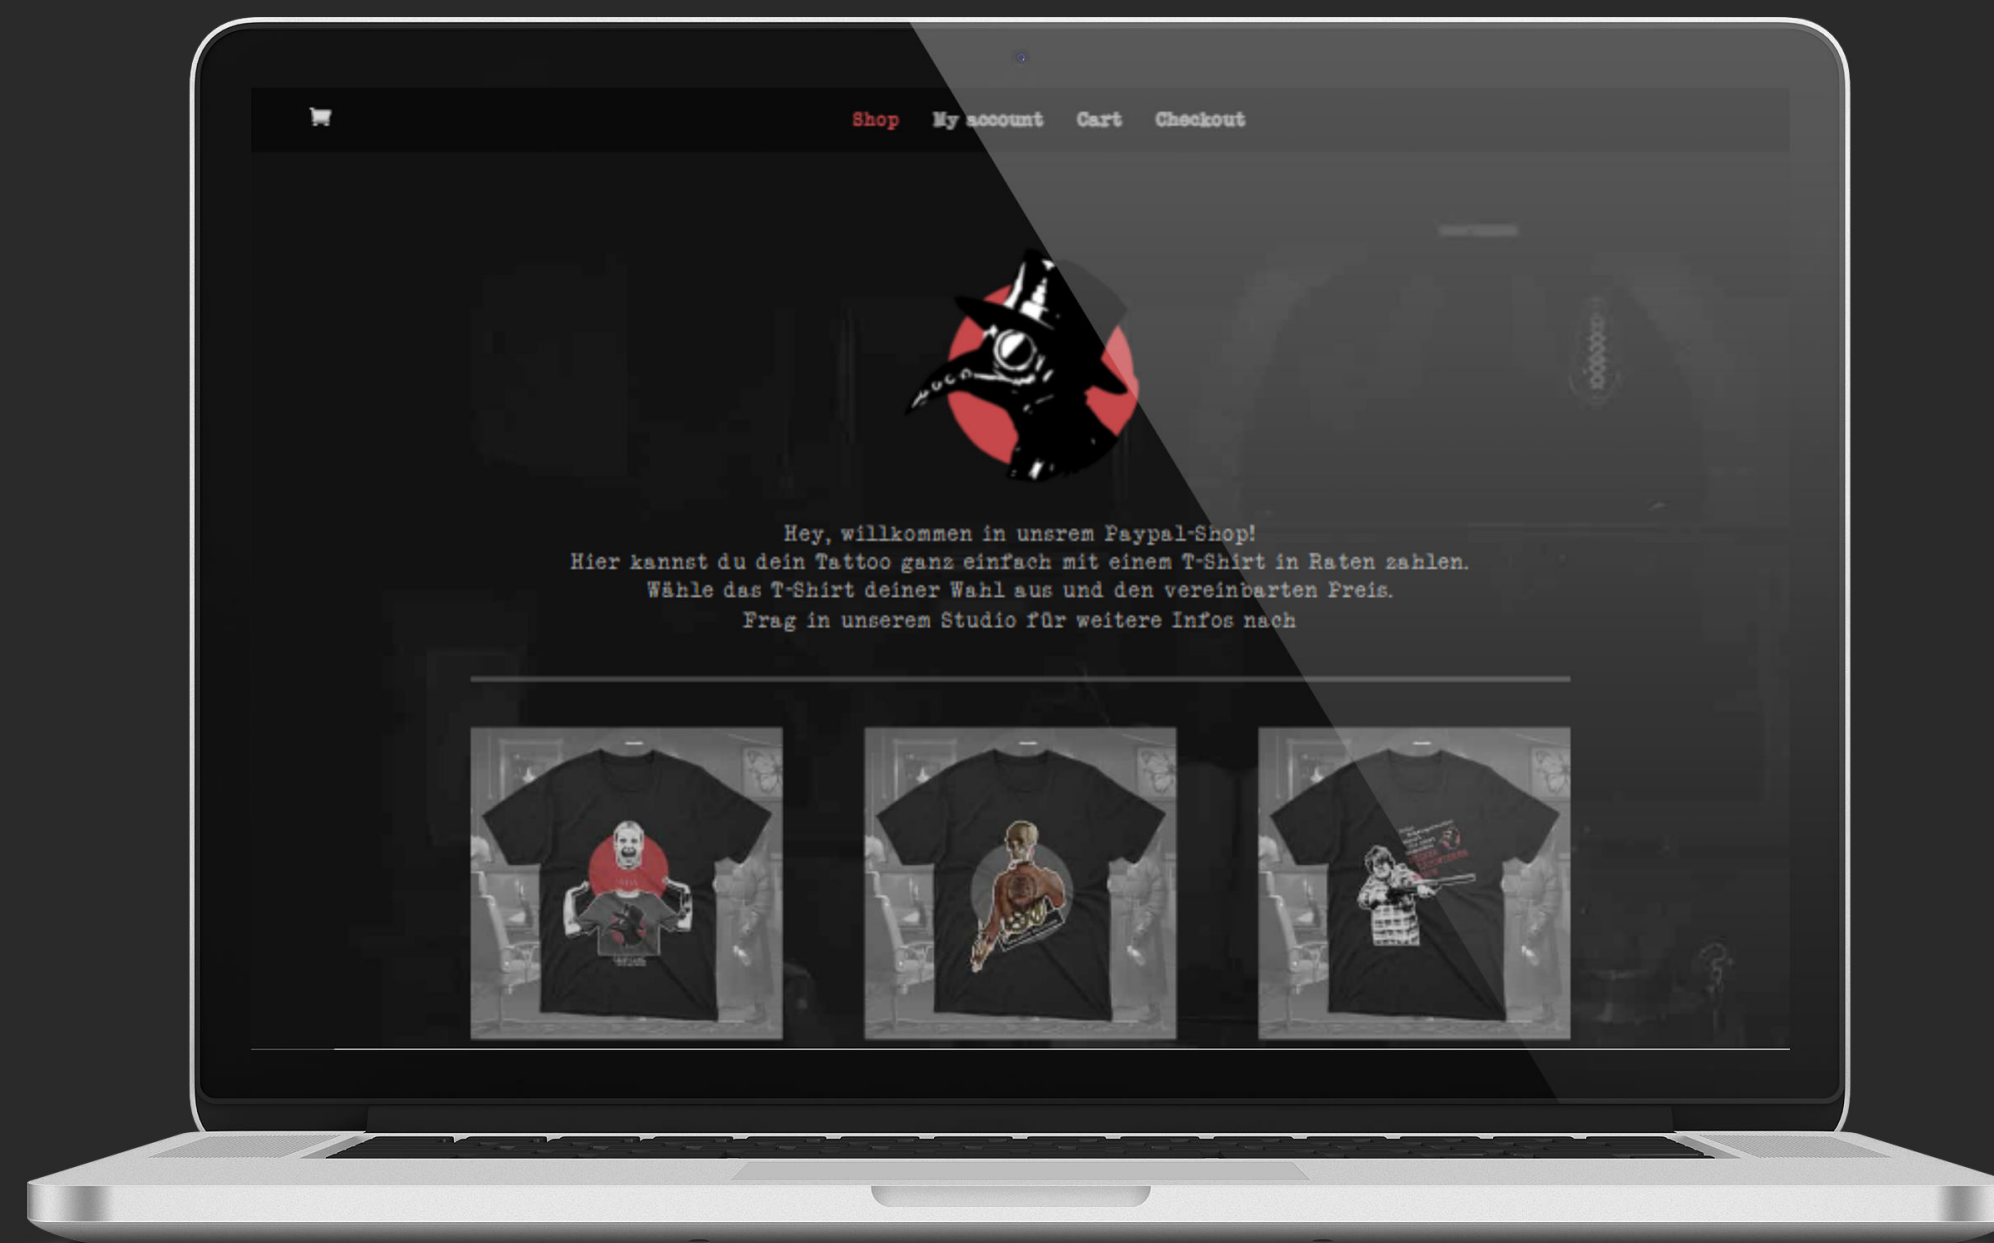

Team:

- Amar Bešlija - Developer
- Šejla Bratić - Designer
- Edita Tahtović - Copywriter

blog.color-clinic.com

Color Clinic Shop

shop2020.color-clinic.com

For our client - Color Clinic Tattoo, we have created a modern and simple web shop that would allow the sale of merch and the tattoo services themselves through using PayPal.

We used dark gray and white as base colors, and we marked all important places on the website with red color.

We adjusted the font to match the base font on the main color-clinic.com website.

The shop has all the possibilities of the customer, product and sales / purchase management.

Created within Dom Collection d.o.o.

Team:

- Amar Bešlija - Developer
- Šejla Bratić - Designer
- Edita Tahtović - Copywriter

Ink2Innovation

We have created a modern, informative website for our client with the aim of promoting marketing services for the Tattoo industry of the Ink2Innovation company.

We used white as the basis color, while we marked important places on the web page with the dark gray color that appears also within the animations on the home page.

We used font which can be found on the company logo.

Created within Dom Collection d.o.o.

Team:

- Amar Bešlija - Developer
- Šejla Bratić - Designer
- Edita Tahtović - Copywriter

ink2innovation.com

Moja Gradnja – Build d.o.o

mojagradnja.com

For our client, Build d.o.o. we have created a modern, informative website with the aim of presenting the construction company to the market.

For the basic colors, we chose white and the dominant red color, where both the colors and the font are adapted to the logo itself. Within the website, we presented all the services of the company itself, and we implemented contact forms and added other contact information for visitors.

We have also implemented a blog called “Notices” to give the client the opportunity to publish various informative articles for their visitors.

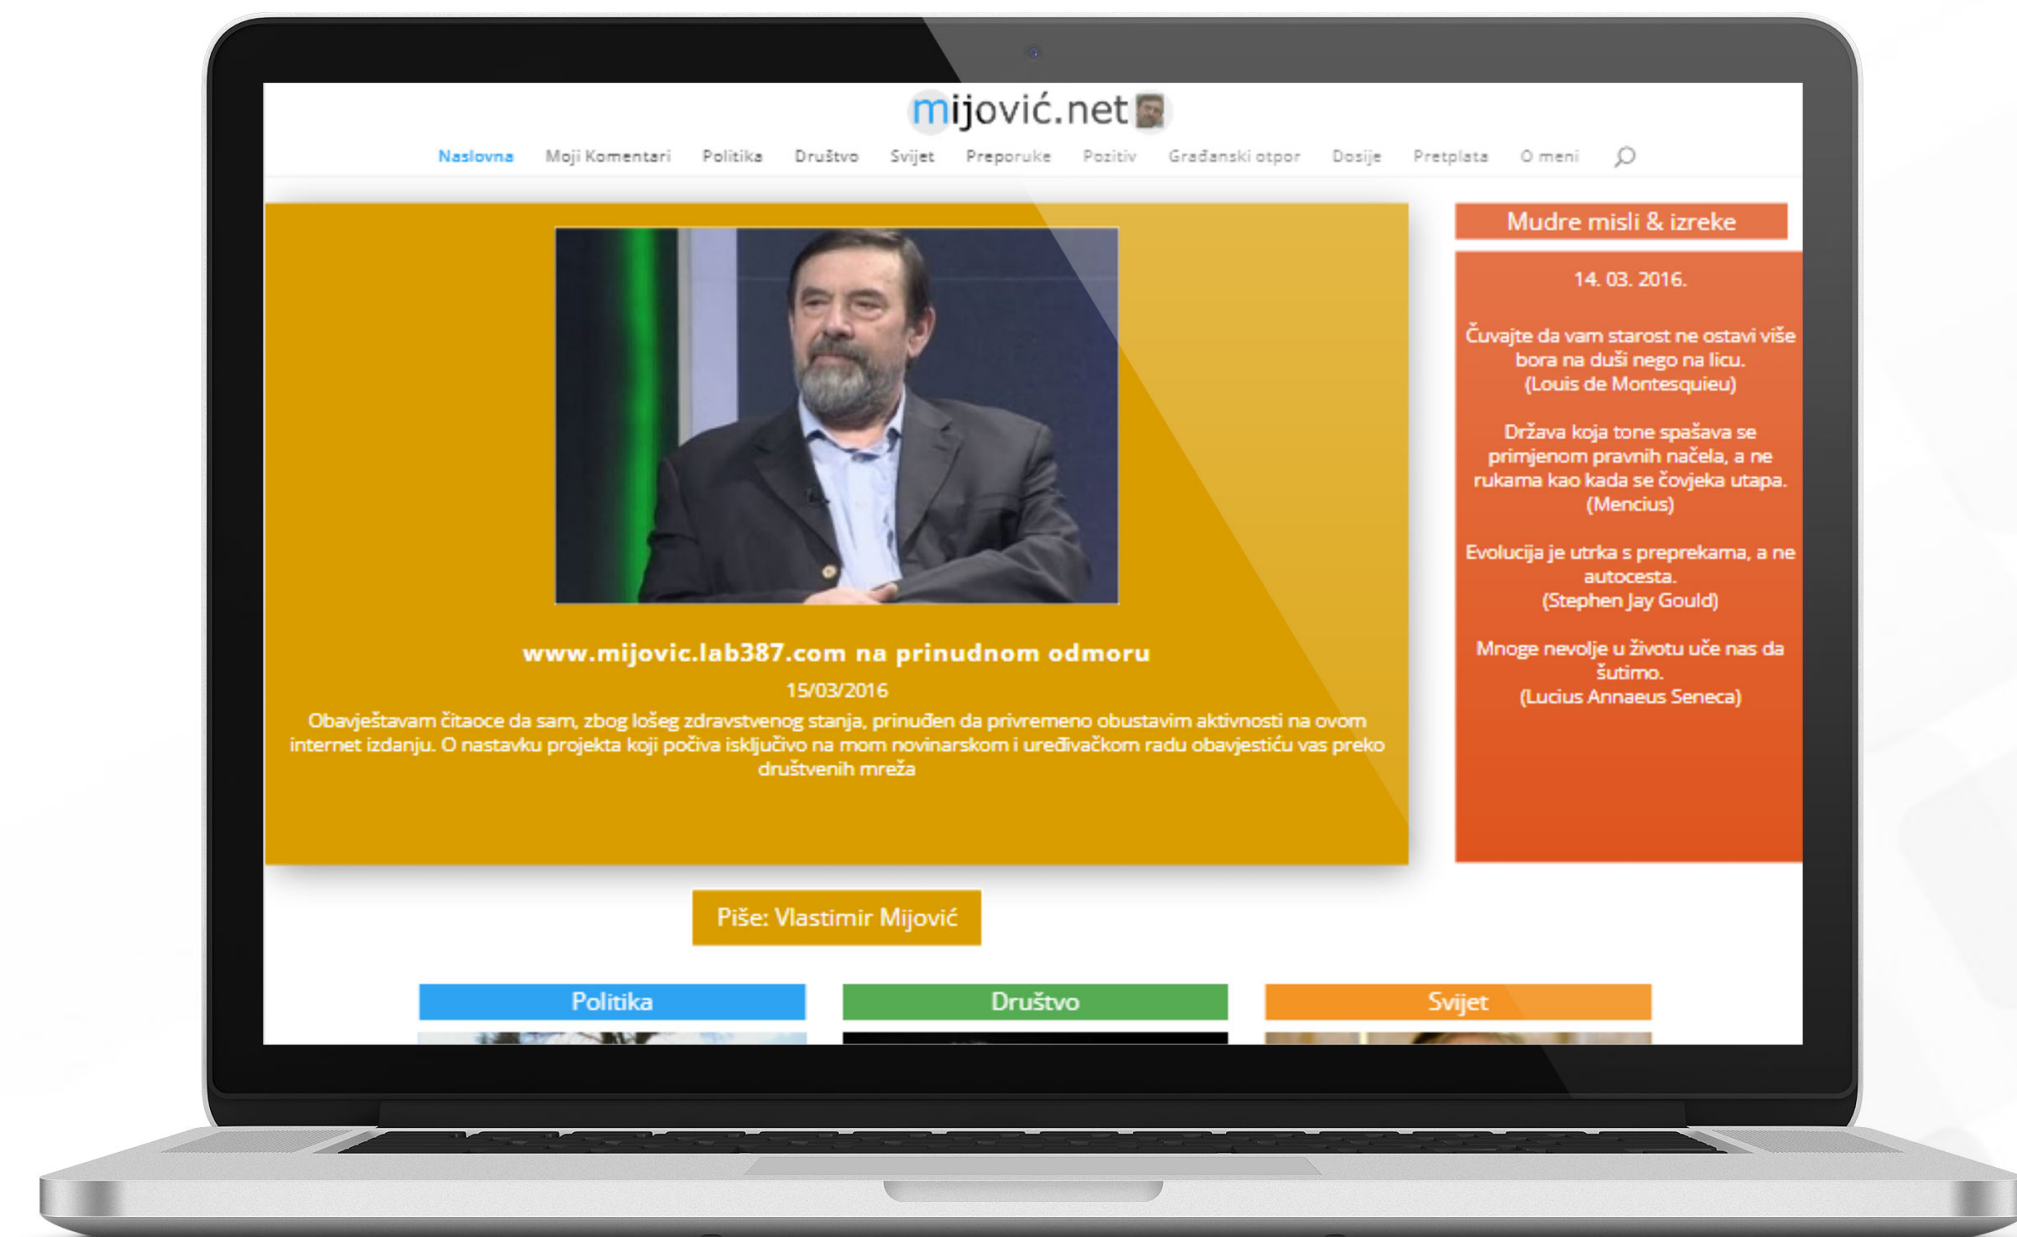

Vlastimir Mijović Portal

For our client, Vlastimir Mijović, we have created a modern and simple web portal for publishing different types of texts.

We transferred the entire content from the blogger to the WordPress platform, and then we created a new design.

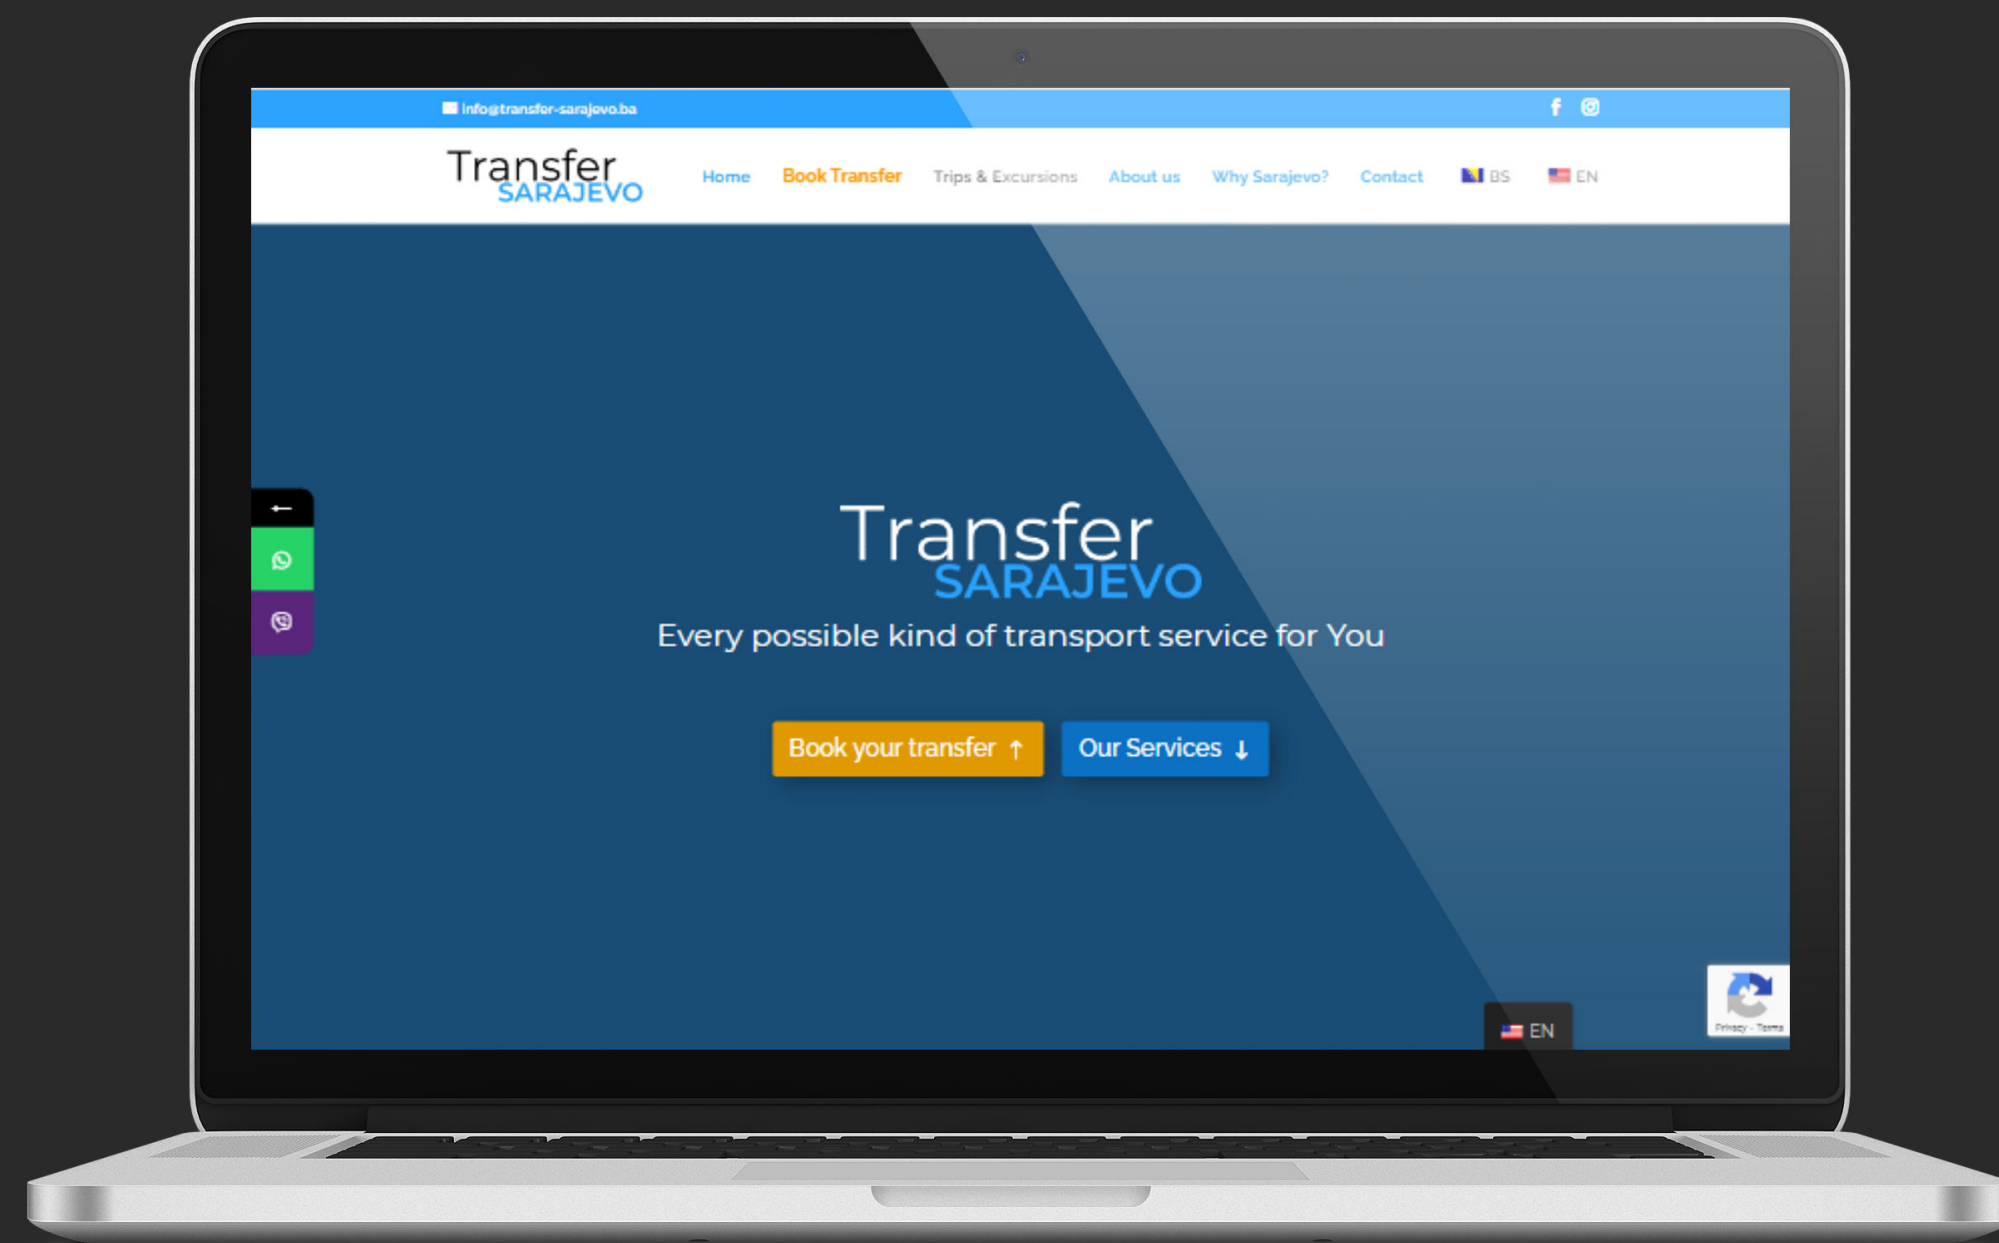

We also divided the content into different journalistic categories, with different colors, in order to make it easier for potential clients to find their way within the website.

Within the website, a subscription to the portal itself is implemented using PayPal payment.

mijovic.lab387.com

Transfer Sarajevo

transfer-sarajevo.ba

We have created a modern, informative and bilingual website for our clients to promote their transport services.

For the basic colors we took white and blue, and we used a font appropriate to the basic logo of our clients.

We have implemented the functionalities of the contact form as well as the reservations of the transport services themselves.

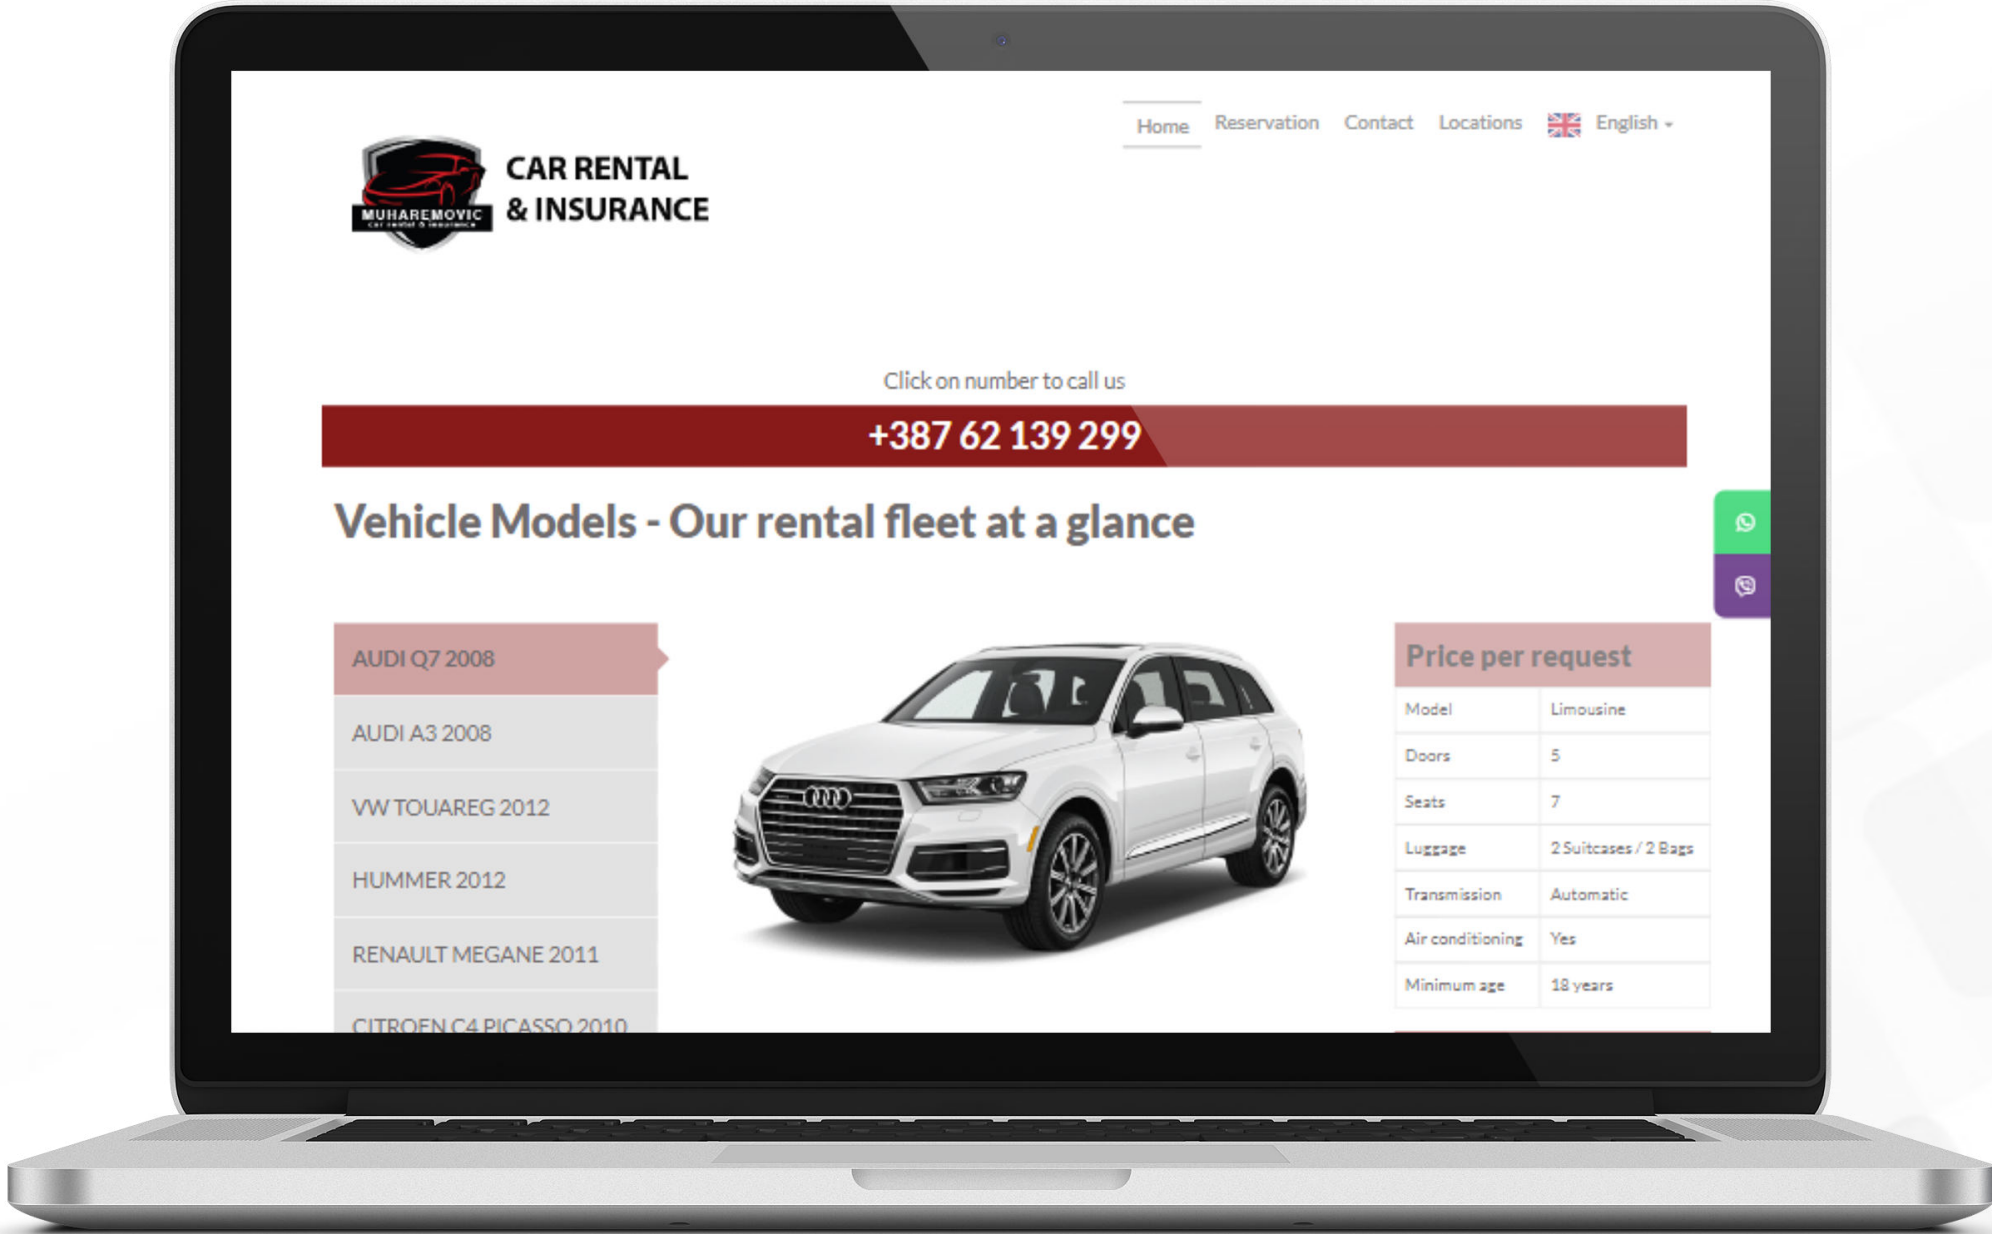

Rent a Car Muharemović

For our client, we took over the existing website, switched it to better and faster hosting and edited it in accordance with modern standards of the profession.

We reorganized the entire structure, inserted calls to action, and merged different sections of the site to work together.

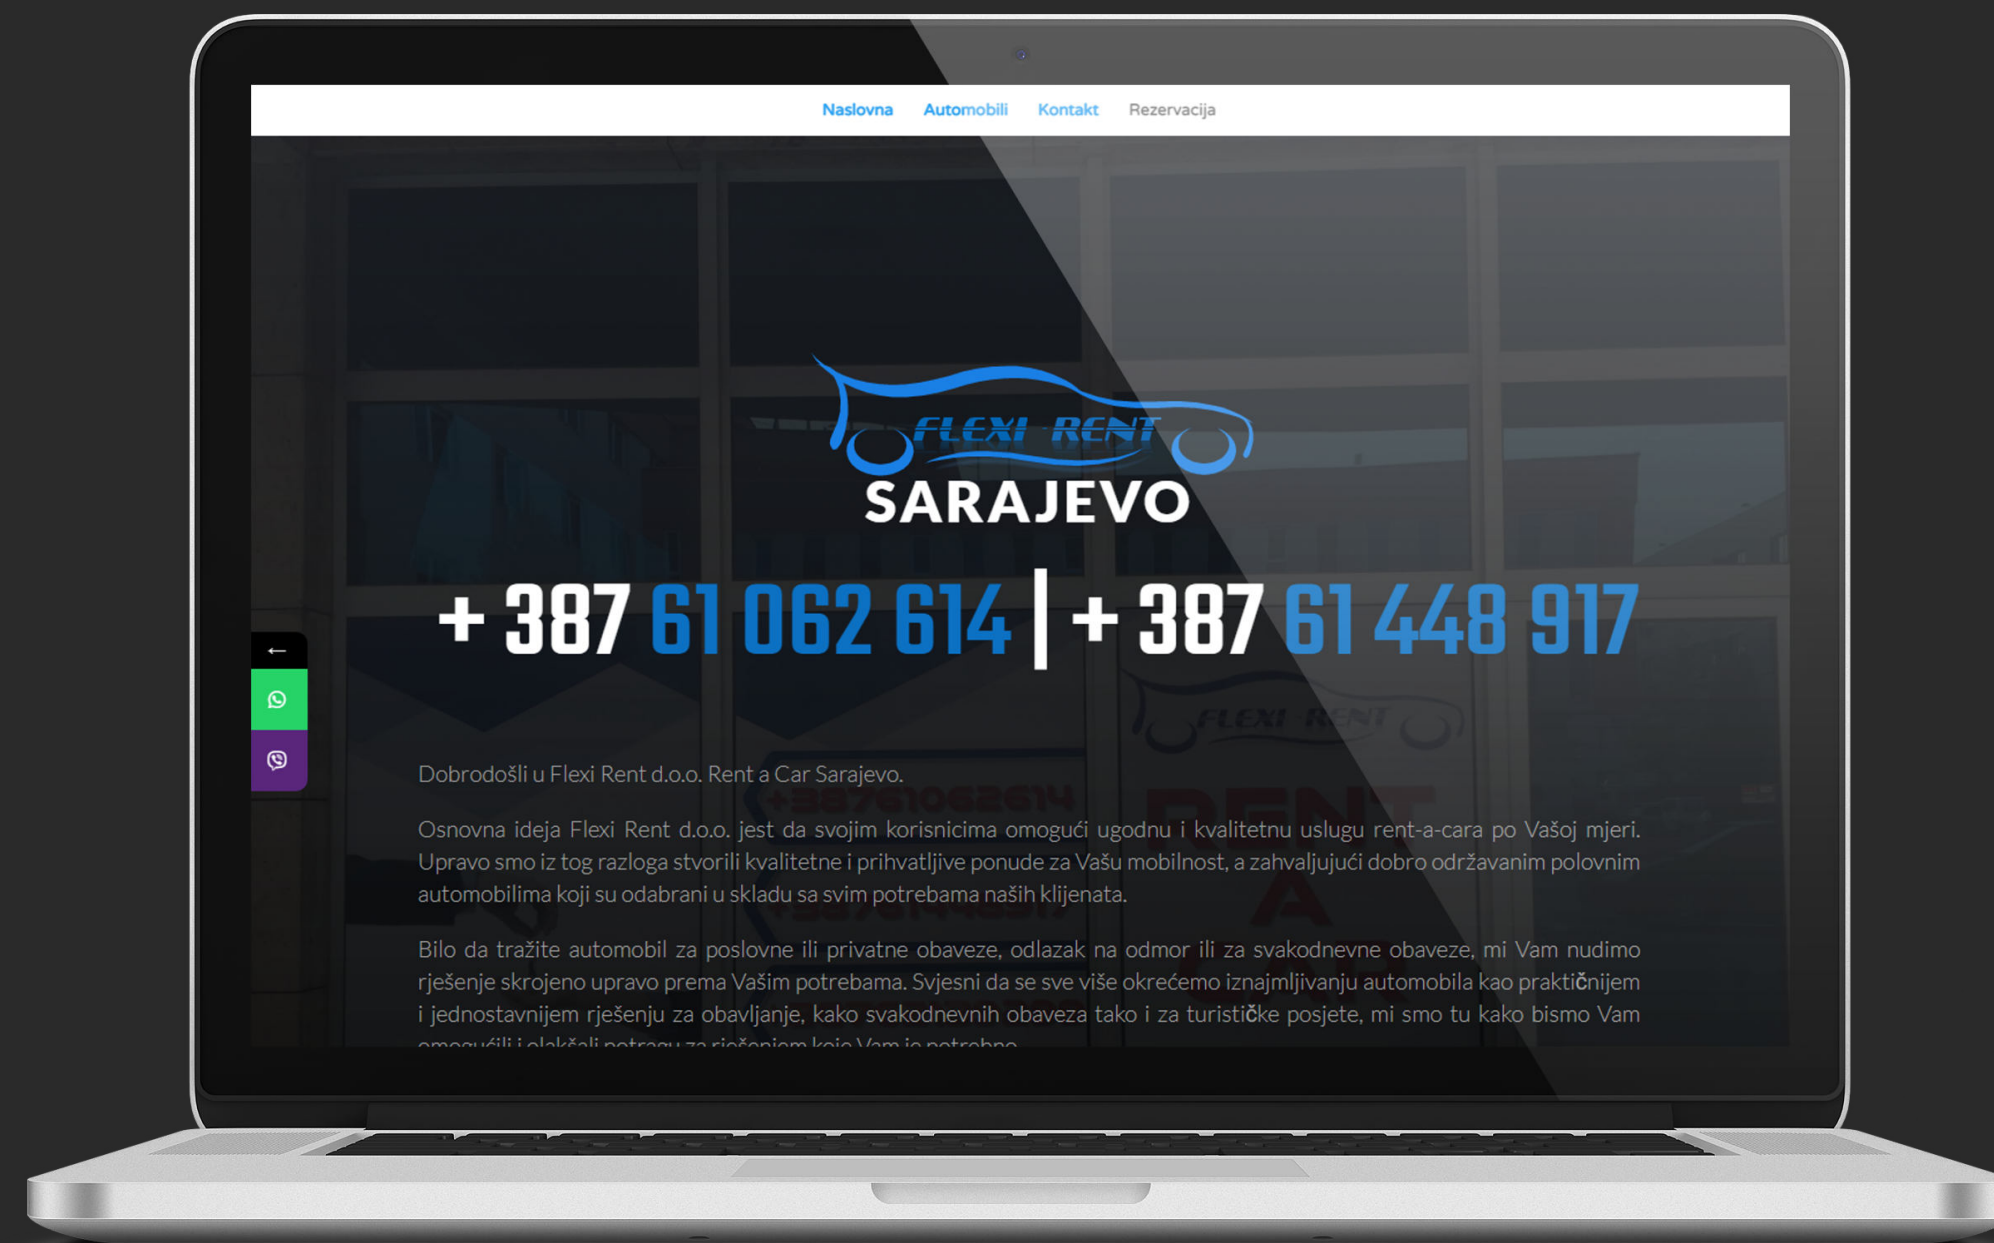

We added the possibility of translating the site and we did the translations ourselves in order to enable our client to work with foreign clients - tourists.

We also included information about car washes and created the possibility of online car reservations.

muharemovic.lab387.com

Flexi Rent – Rent a Car

flexirent.lab387.com

For our client, we took over the existing website, did a complete redesign along with the content, and moved it to better hosting.

We did a reorganization of the structure together with the content, where we did a complete copy and editing of the photos.

Within the website, we made custom forms next to each of the cars to give visitors the opportunity to book online.

We have also integrated PayPal for advance payments when booking cars online.

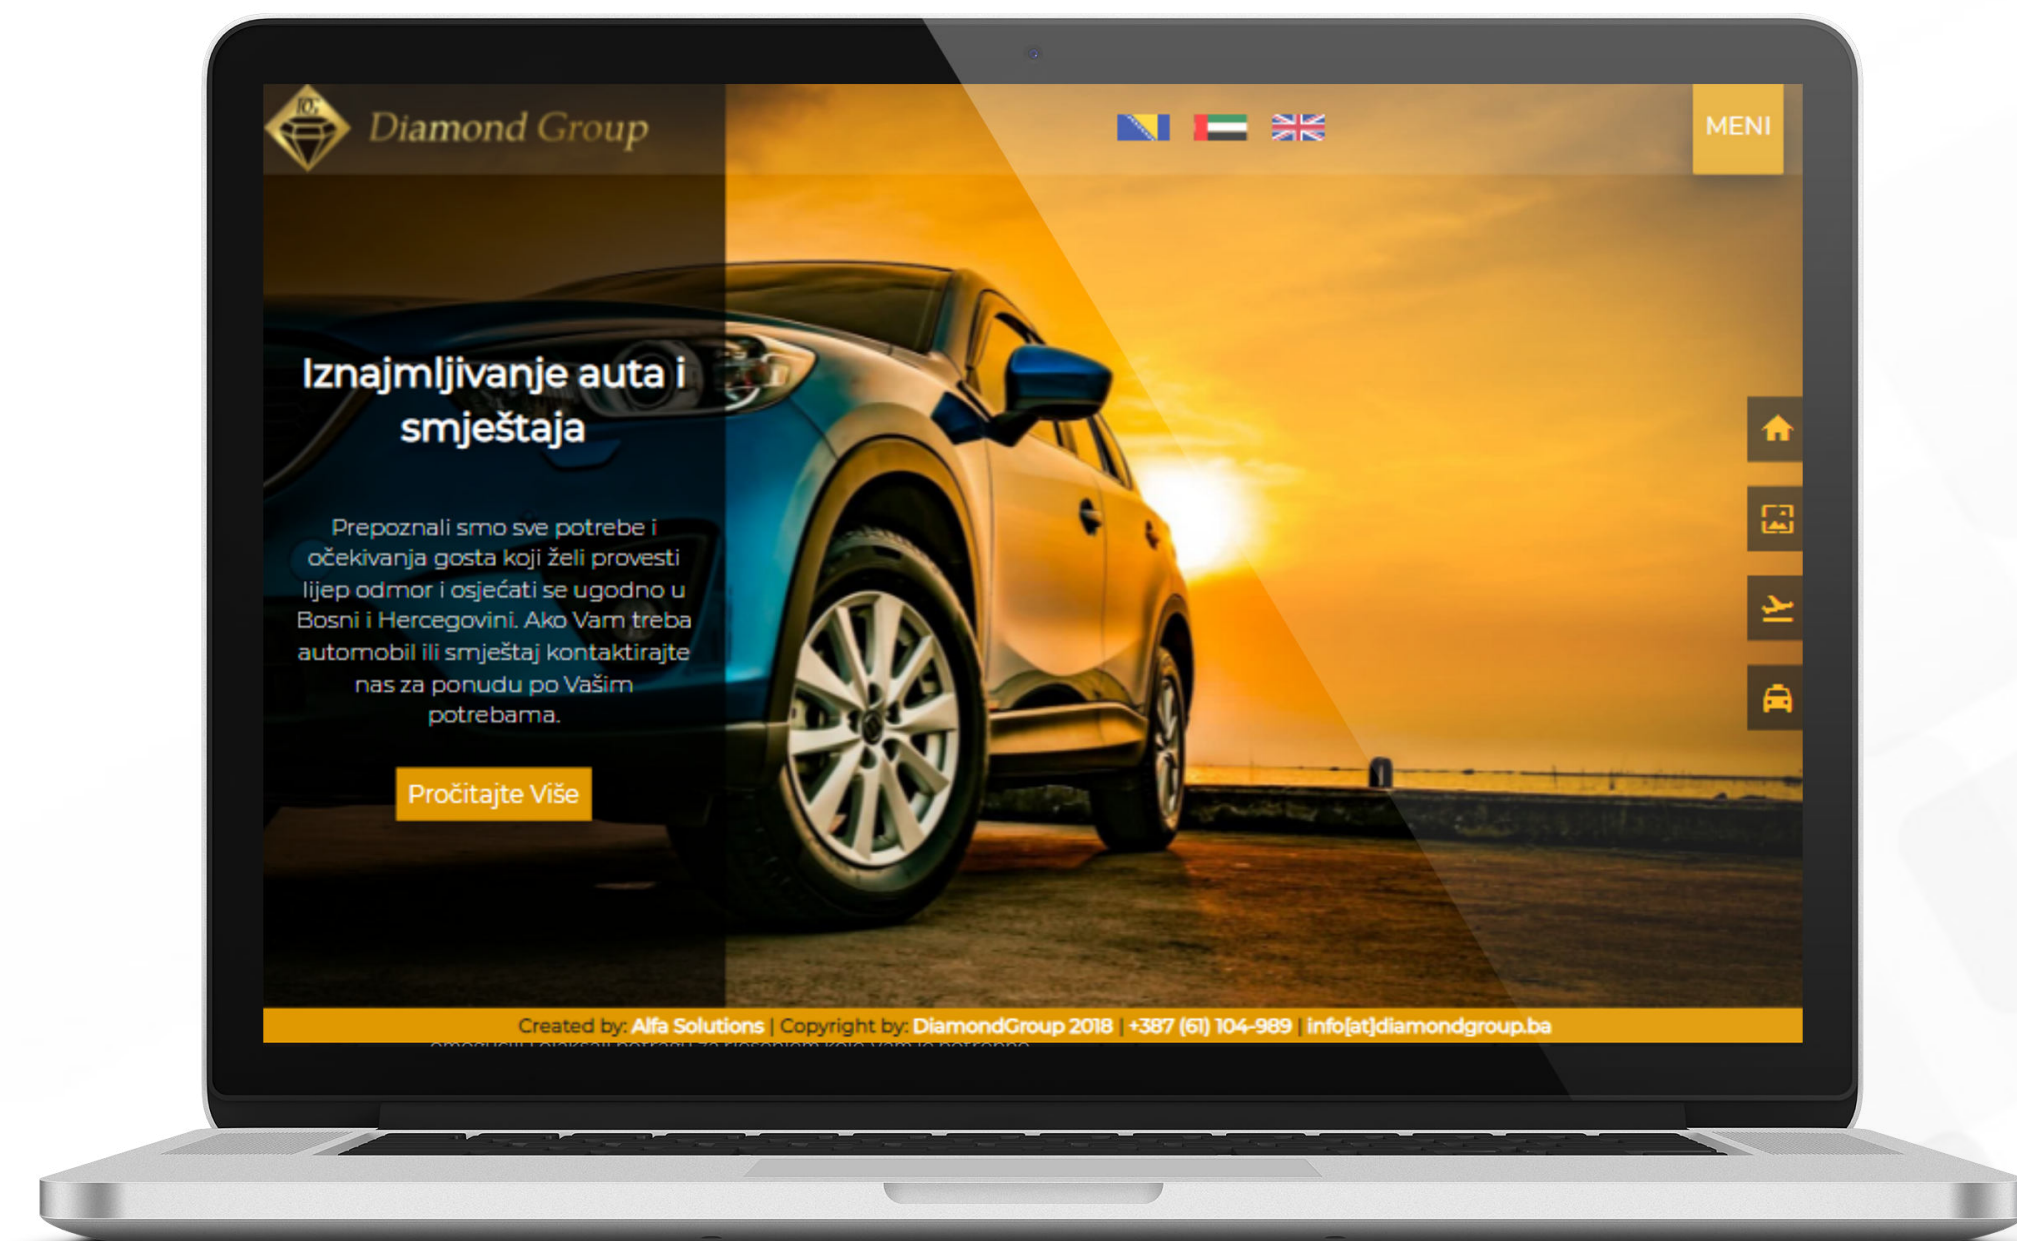

With simple animations and transitions, we have introduced a dose of modernity and interactivity within this website.

Diamond Group

We have created a modern informative website for our client in order to present all the services from their portfolio: real estate and consulting, design and construction management, tourist offers as well as car and accommodation rental.

For the basic colors, we used white and orange to adapt the website to the design of the logo itself.

The multilingualism of the website itself, the interactive display of photo material, the interactive menu / menu as well as the possibility of a contact form for all website visitors have been implemented.

diamondgroup.ba

Škola nekuvanja

skolanekuvanja.com

For our client, we have created a modern and bold website to promote healthy eating through texts, book sales, recipes and other programs.

For the base color, we took white along with blue and pink to customize the page to our client's logo itself.

We have implemented the ability to add different types of content, Google Adwords ads and contact forms.

Guardia Di Pace

For our clients, we have created a modern, interactive and unusual website to promote a very interesting area - nurturing the Knights of Peace.

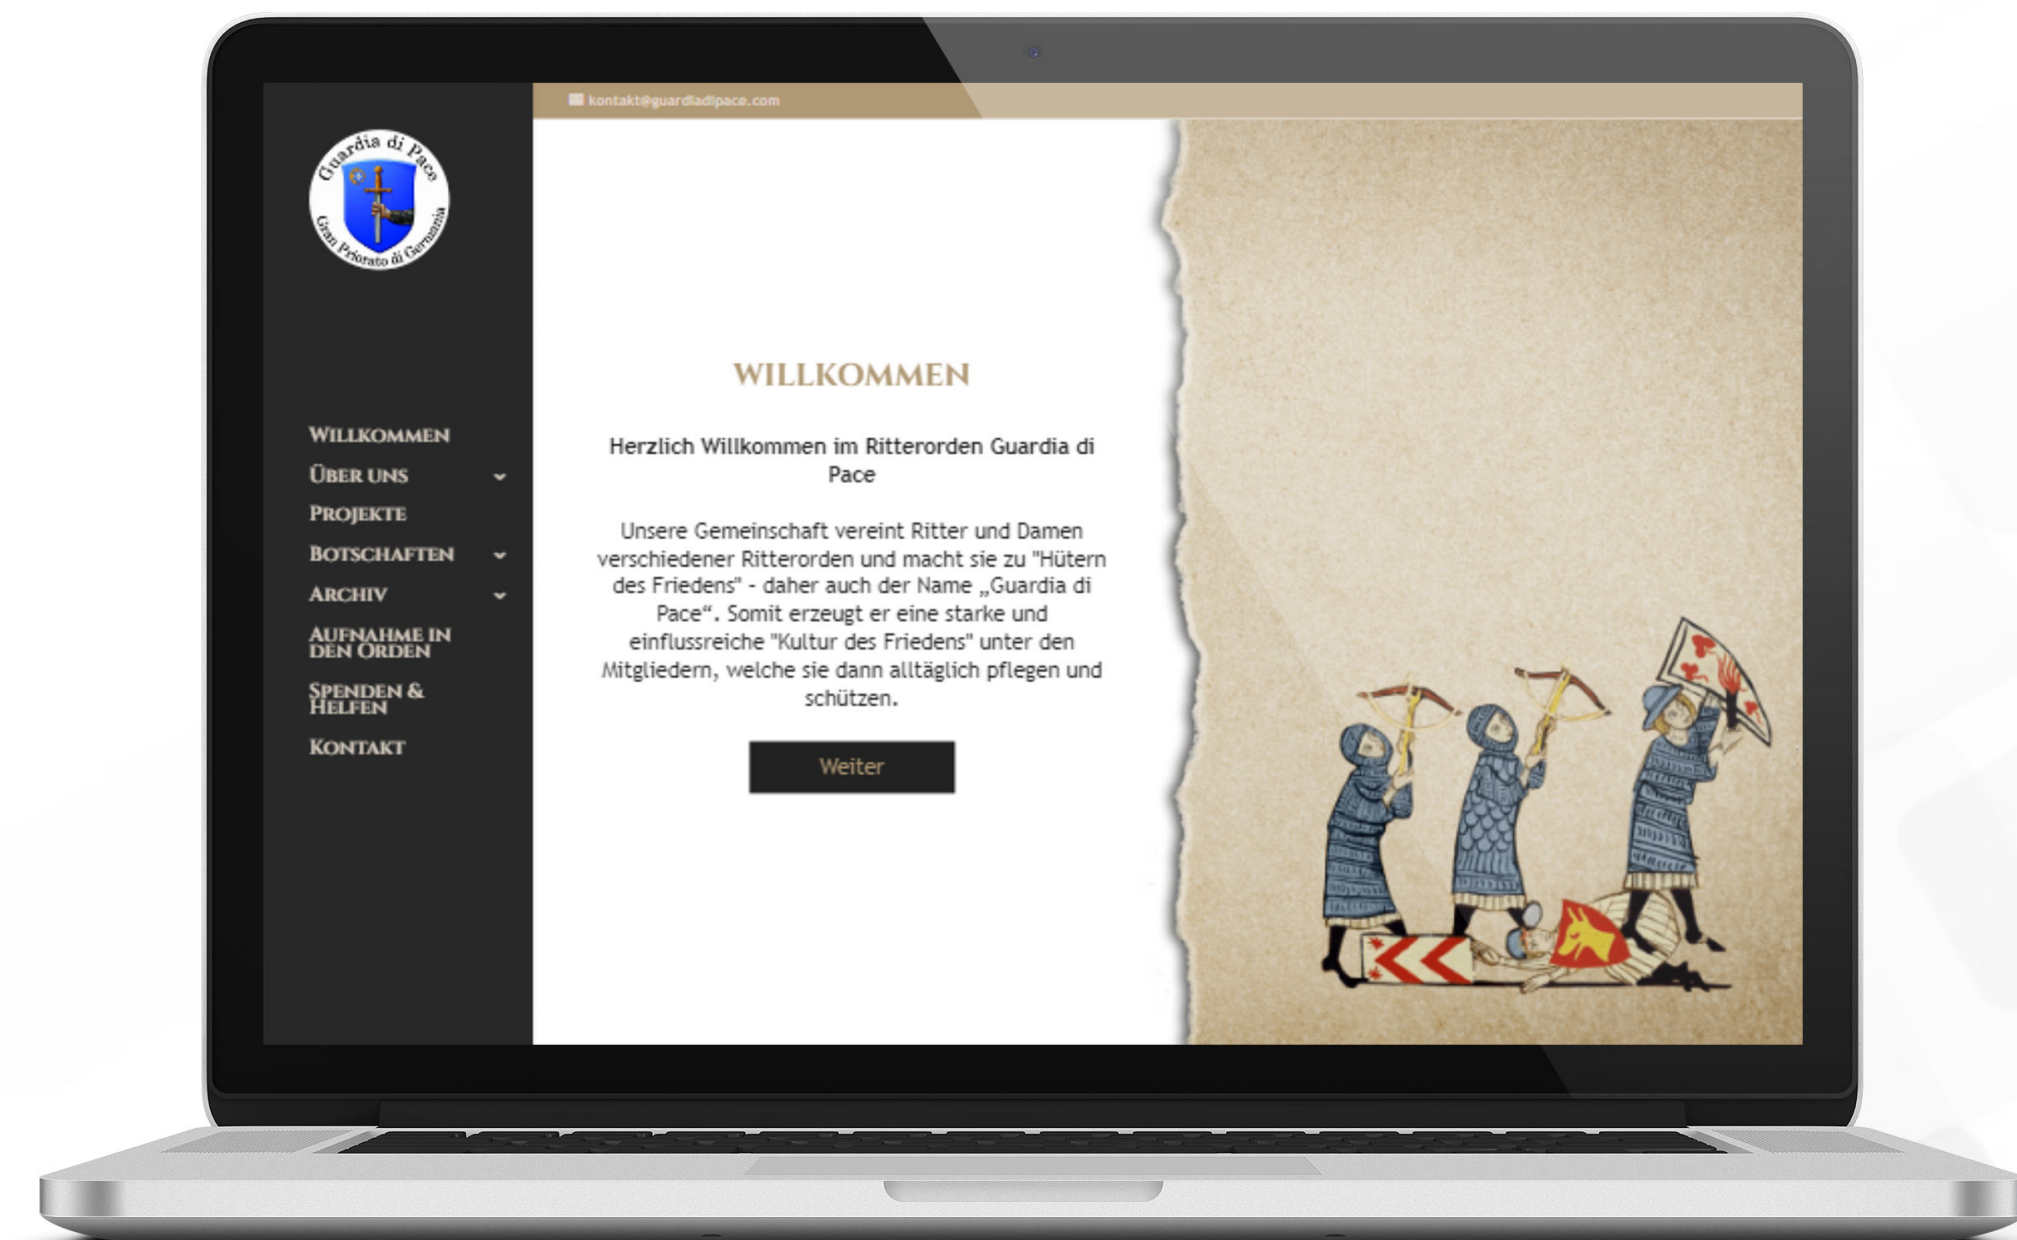

The basic colors are white, dark gray and brown to evoke all the chivalrous values that this association nurtures.

We have implemented interactive navigation for PC and mobile devices, the possibility of donating to the association as well as a contact form for all visitors to this site.

Created within Dom Collection d.o.o.

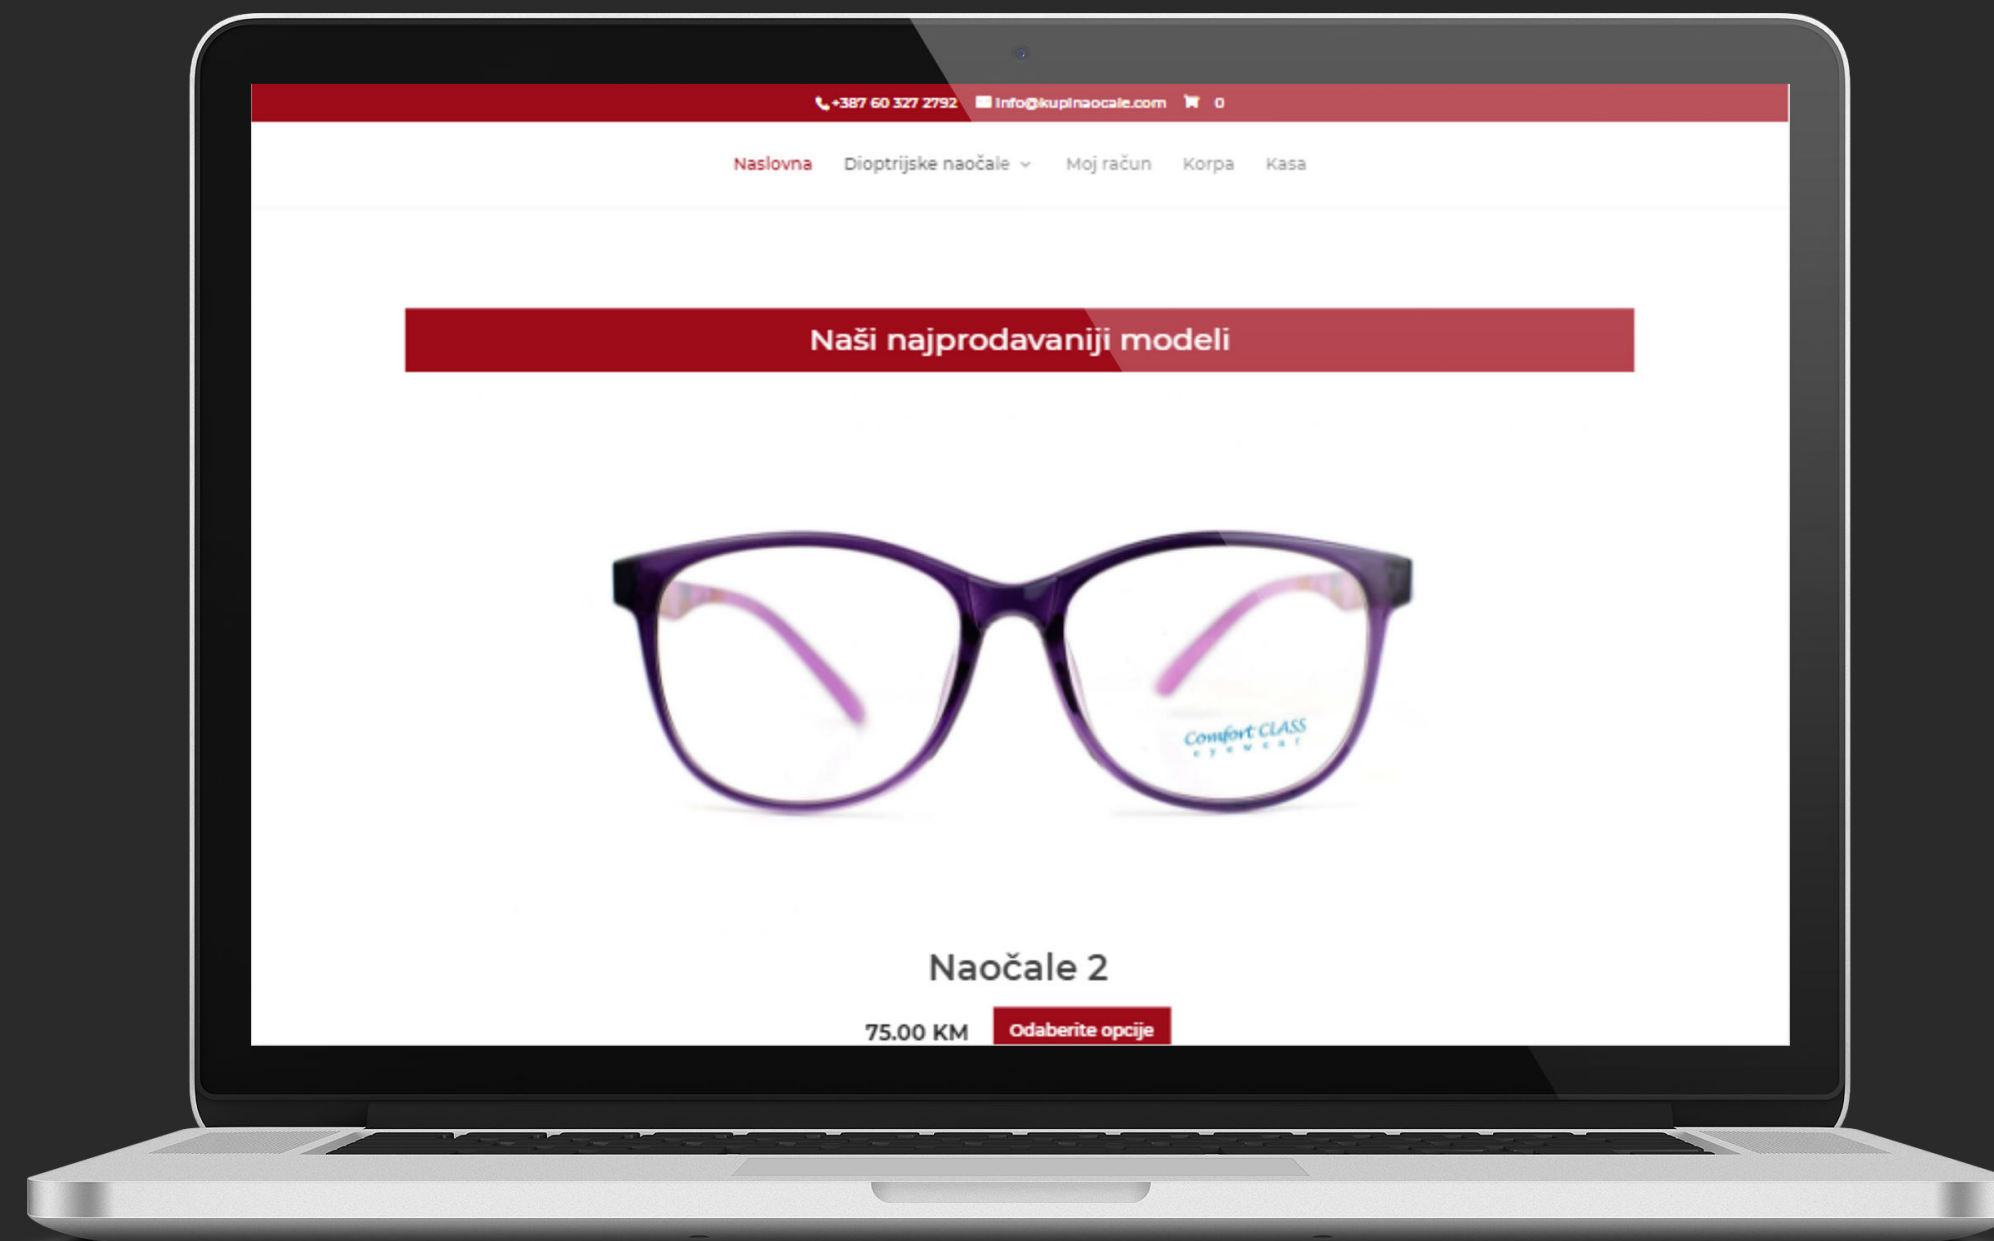

Team:

- Amar Bešlija - Developer
- Šejla Bratić - Designer
- Edita Tahtović - Copywriter

guardiadipace.com

Kupi Naočale Web Shop

kupinaocale.com

For our client, we created a modern and functional web shop for the sale of glasses, where we took white and gray as the basic colors, while we marked all important places on the website in red.

We used a simple and clean font, in line with the logo, to give space to the content to stand out, especially the products themselves.

Within the web shop, we have implemented all the important things: product, order and customer management, and payment by delivery.

For the products themselves, we have implemented additional functionalities for entering diopter information within the order, related products as well as an interactive display of additional product photos.

We have also implemented a cookie notification along with a privacy policy and set up additional information so that web shop visitors can contact the client.

Restoran Gurme Sezam

We created a modern informative website for our client with their offer of food and drinks, and we linked it with the korpa.ba system for orders and sales.

We used white and orange for the basic colors, while we adjusted the font to the logo itself.

An interactive gallery, map and contact form have been implemented on the site to invite potential visitors and buyers to the action.

gurmesezam.lab387.com

Srebrenica Audiobook

audiobook-srebrenica.ba

For our client, the Konrad Adenauer Foundation Sarajevo, we created a modern and interactive website with the aim of listening to and downloading the audio book "Srebrenica - a chronology of a genocide or what happened to Mirnes Osmanovic" by Matthias Fink.

For the basic colors, we took white and blue to adapt it to the other design of the KAS Foundation, and we chose a clean and sharp font to make reading the content easier.

On the site, we have implemented the ability to download the complete audio book and the ability to listen to it by chapter.

We have also implemented a contact form for all website visitors.

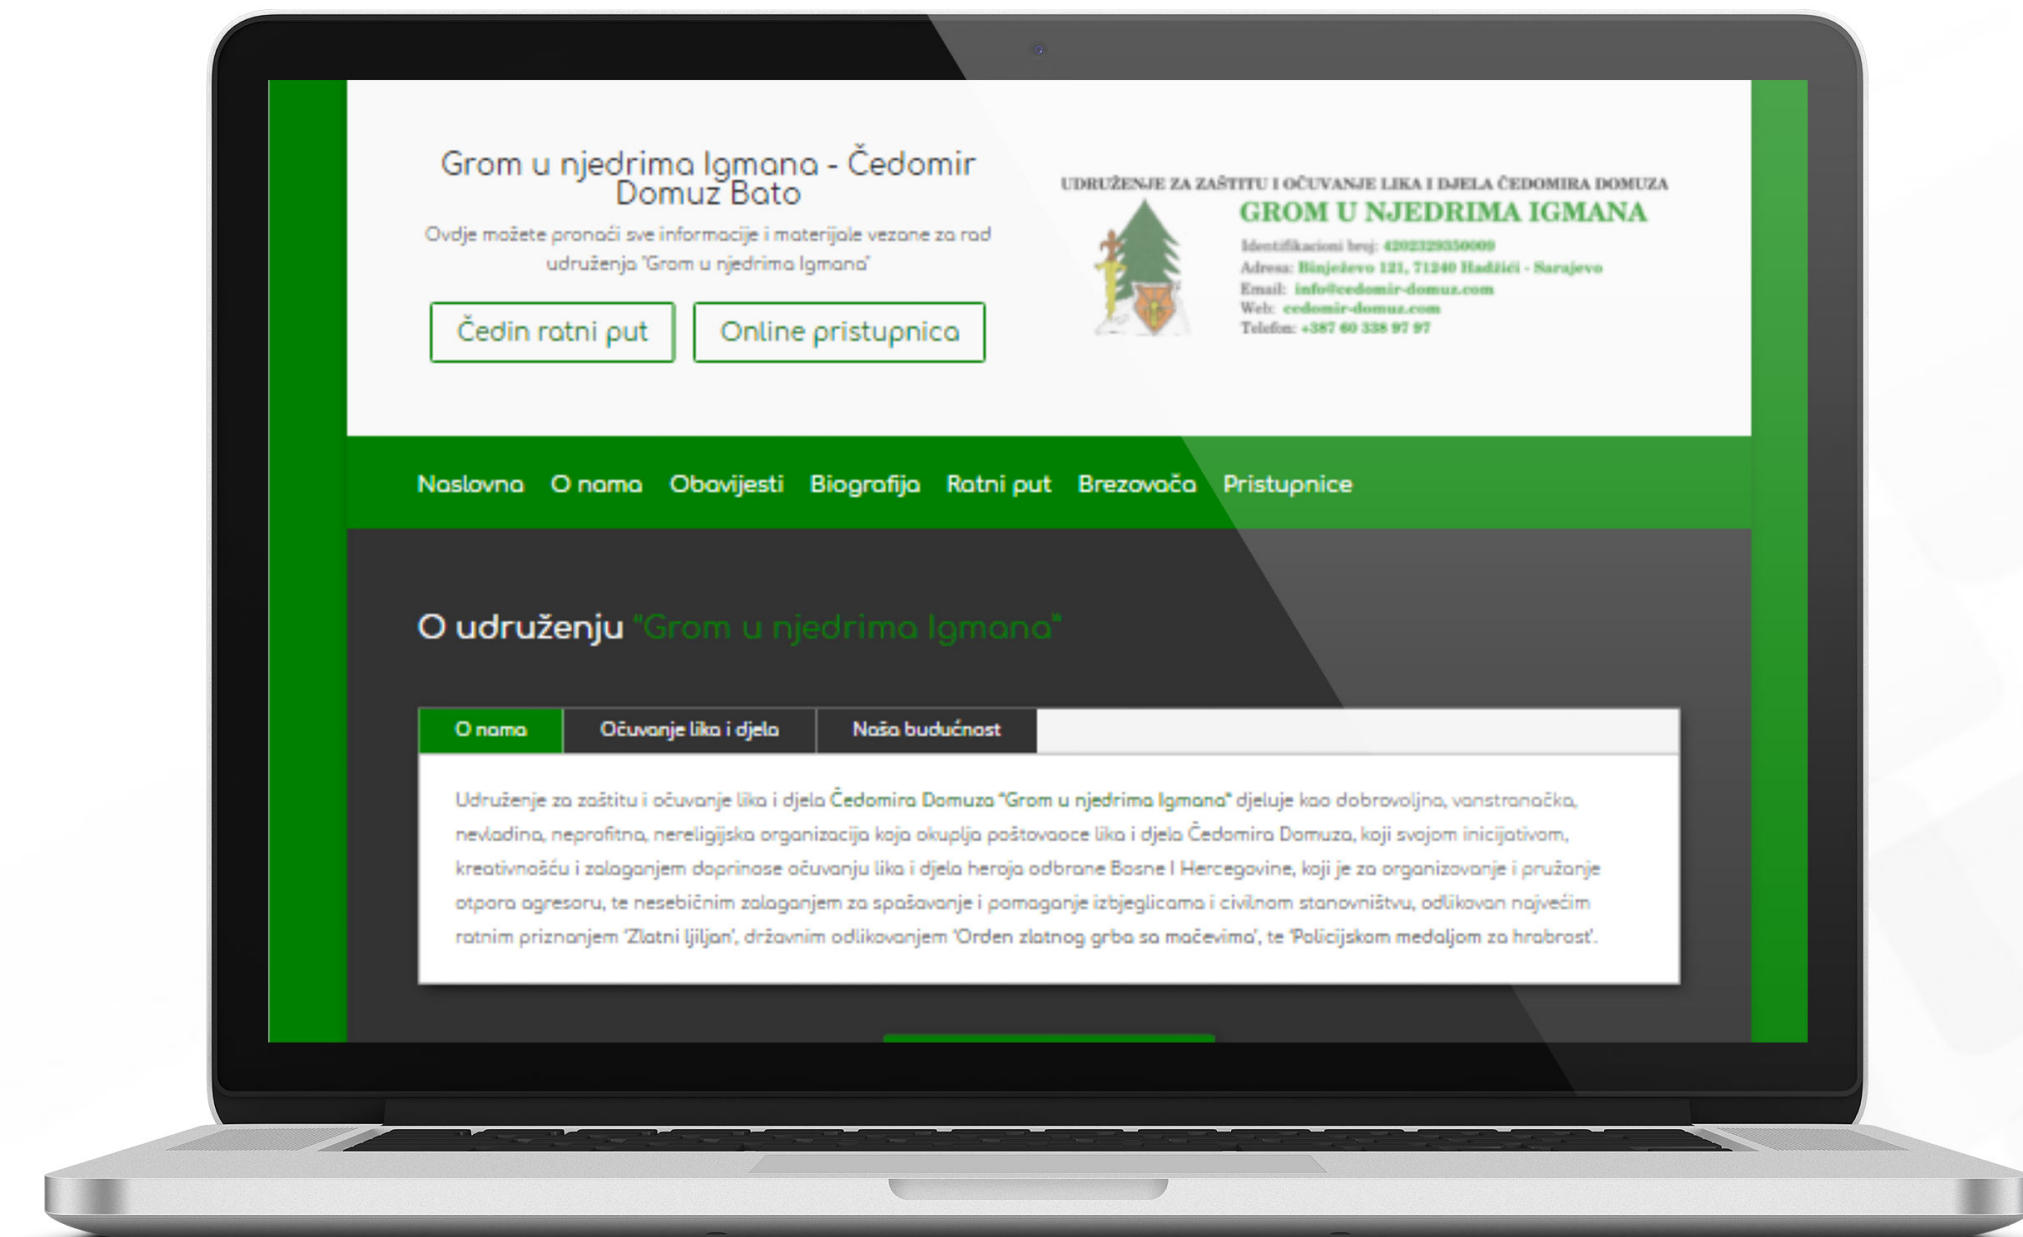

Udruženje Čedomir Domuz

For our clients, the Association for the Protection and Preservation of the Character and Works of Čedomir Domuz, we have created a modern and informative website to present the work of the association itself.

For the basic colors, we chose white, dark gray and green, and we chose a font that is clean and easy to read.

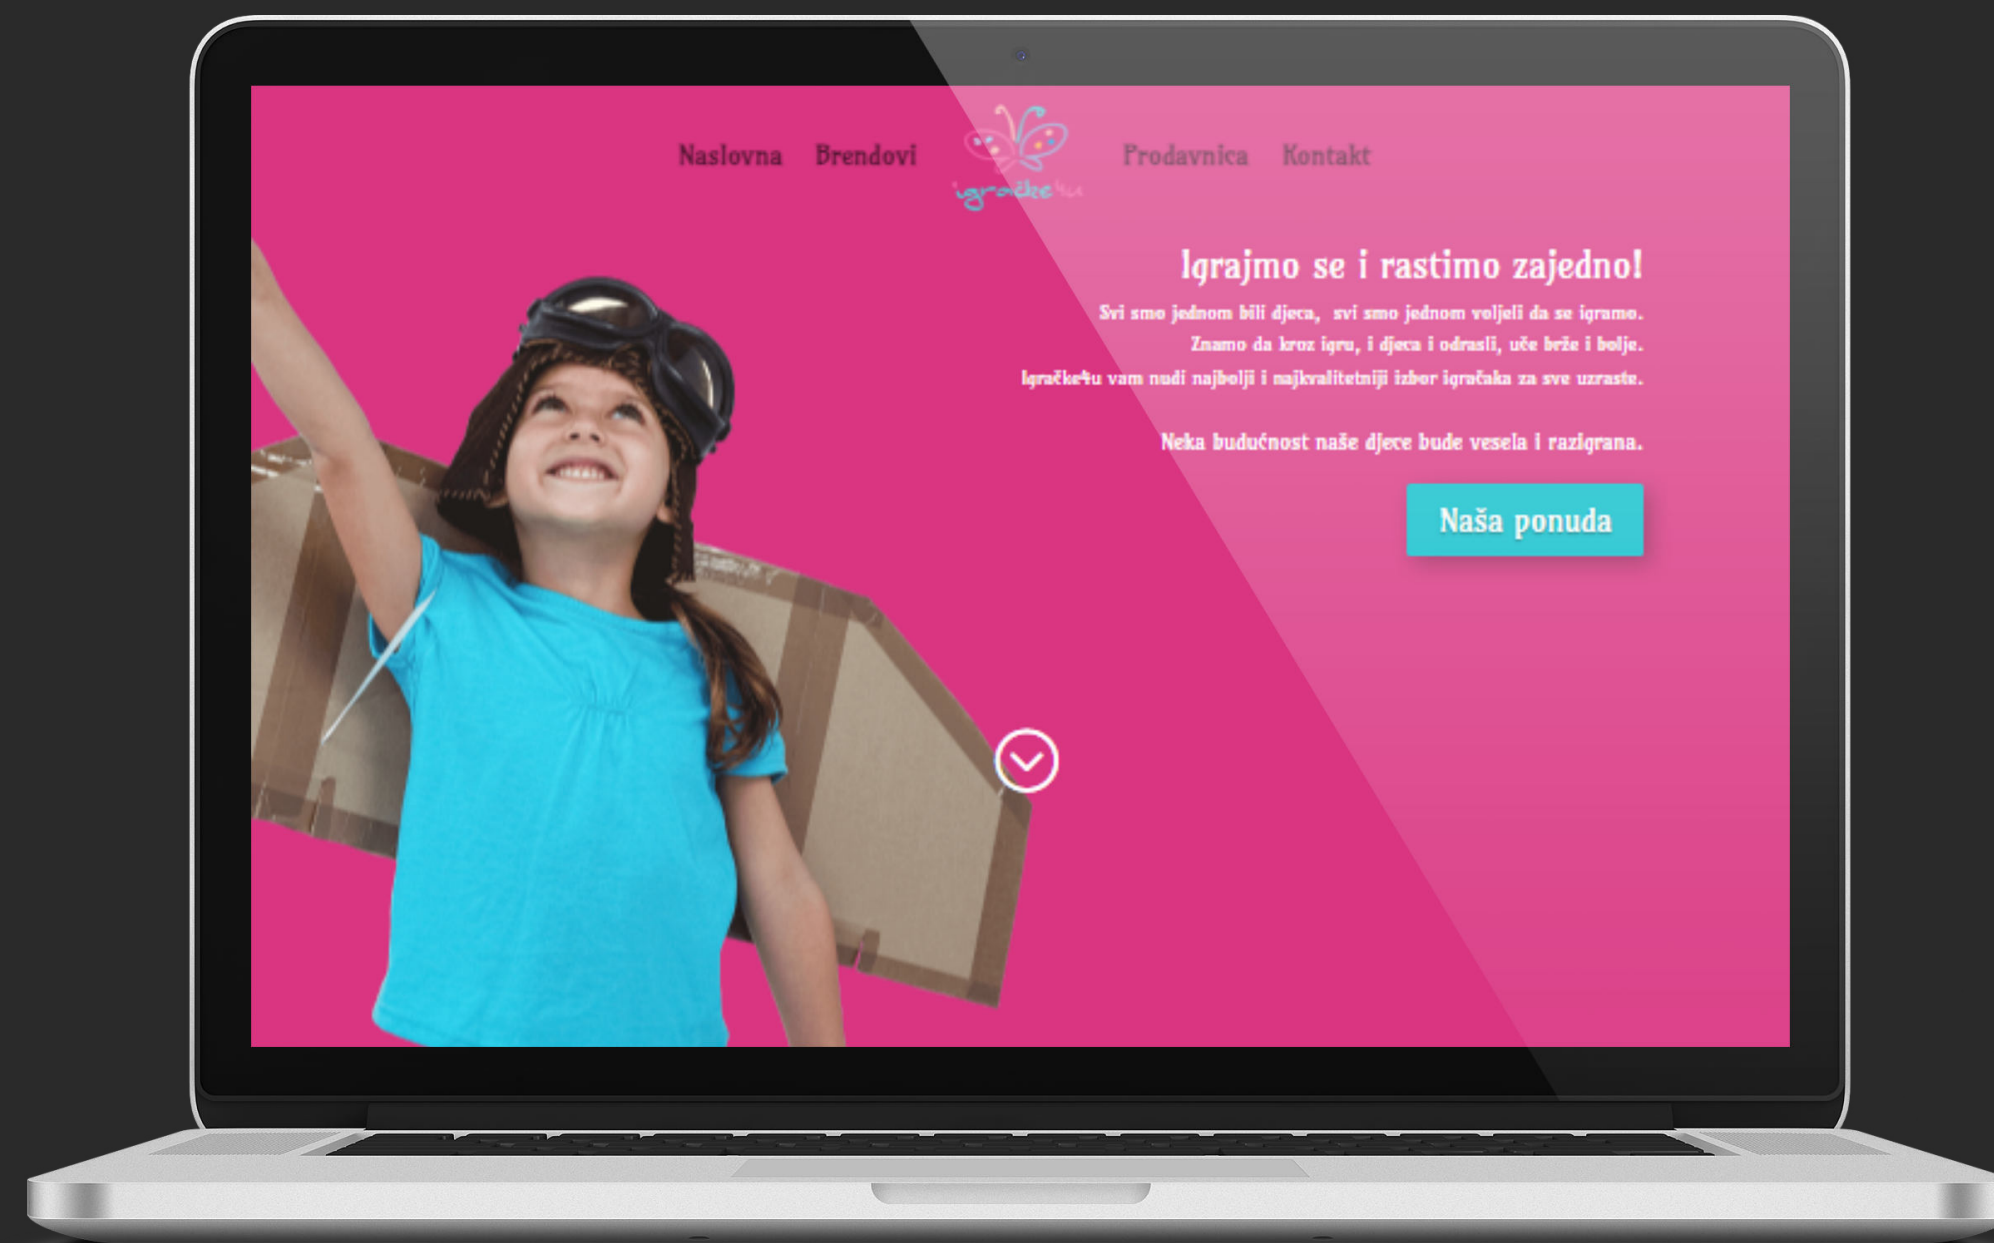

Within the website, we inserted and designed a lot of materials, and we also implemented the functionalities of online application forms with the management of all users who joined the association.

We also implemented the functionality of the contact form and added all other necessary information about the association.

cedomir-domuz.com

Igracke4U

igracke4u.com

We have created a modern and cheerful website for our clients to show all their products - toys.

For the basic colors, we took blue and pink, which we adapted to the logo itself.

Between sections for different content, we created special gradients of the background itself to make the transitions from one section to another invisible.

For selected product categories, we inserted the manufacturer's logos, while we colored the complete content of the website in white.

At the end of the page we have added all the necessary contact information together with the contact form.

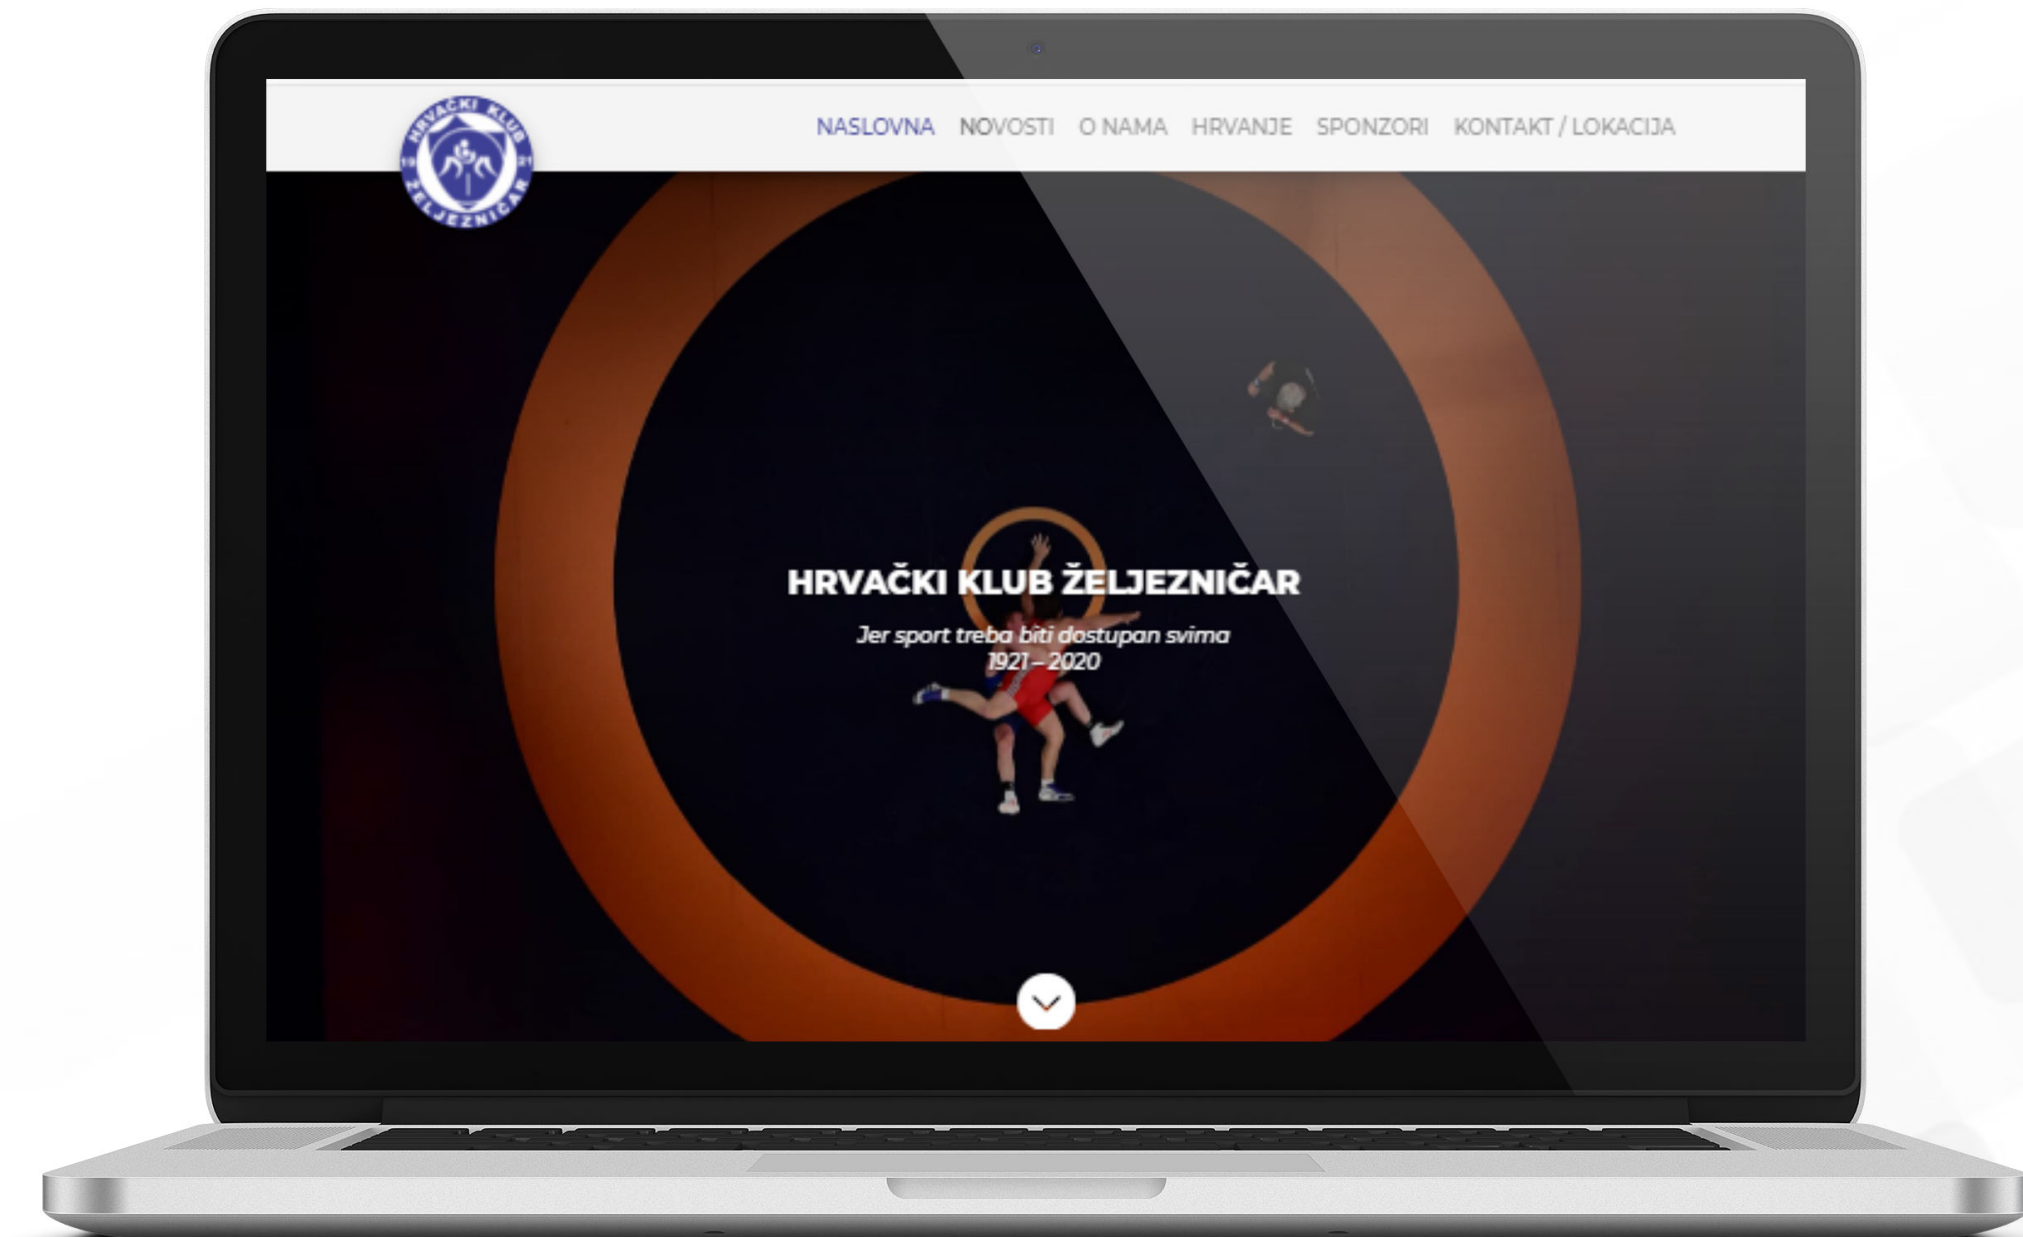

Hrvački klub Željezničar

For our client with a tradition of eighty years of existence, we have created a modern and dynamic website together with a blog.

For the basic colors, we took white and purple from the client's logo, and we used a modern font to make the complete content high quality and readable.

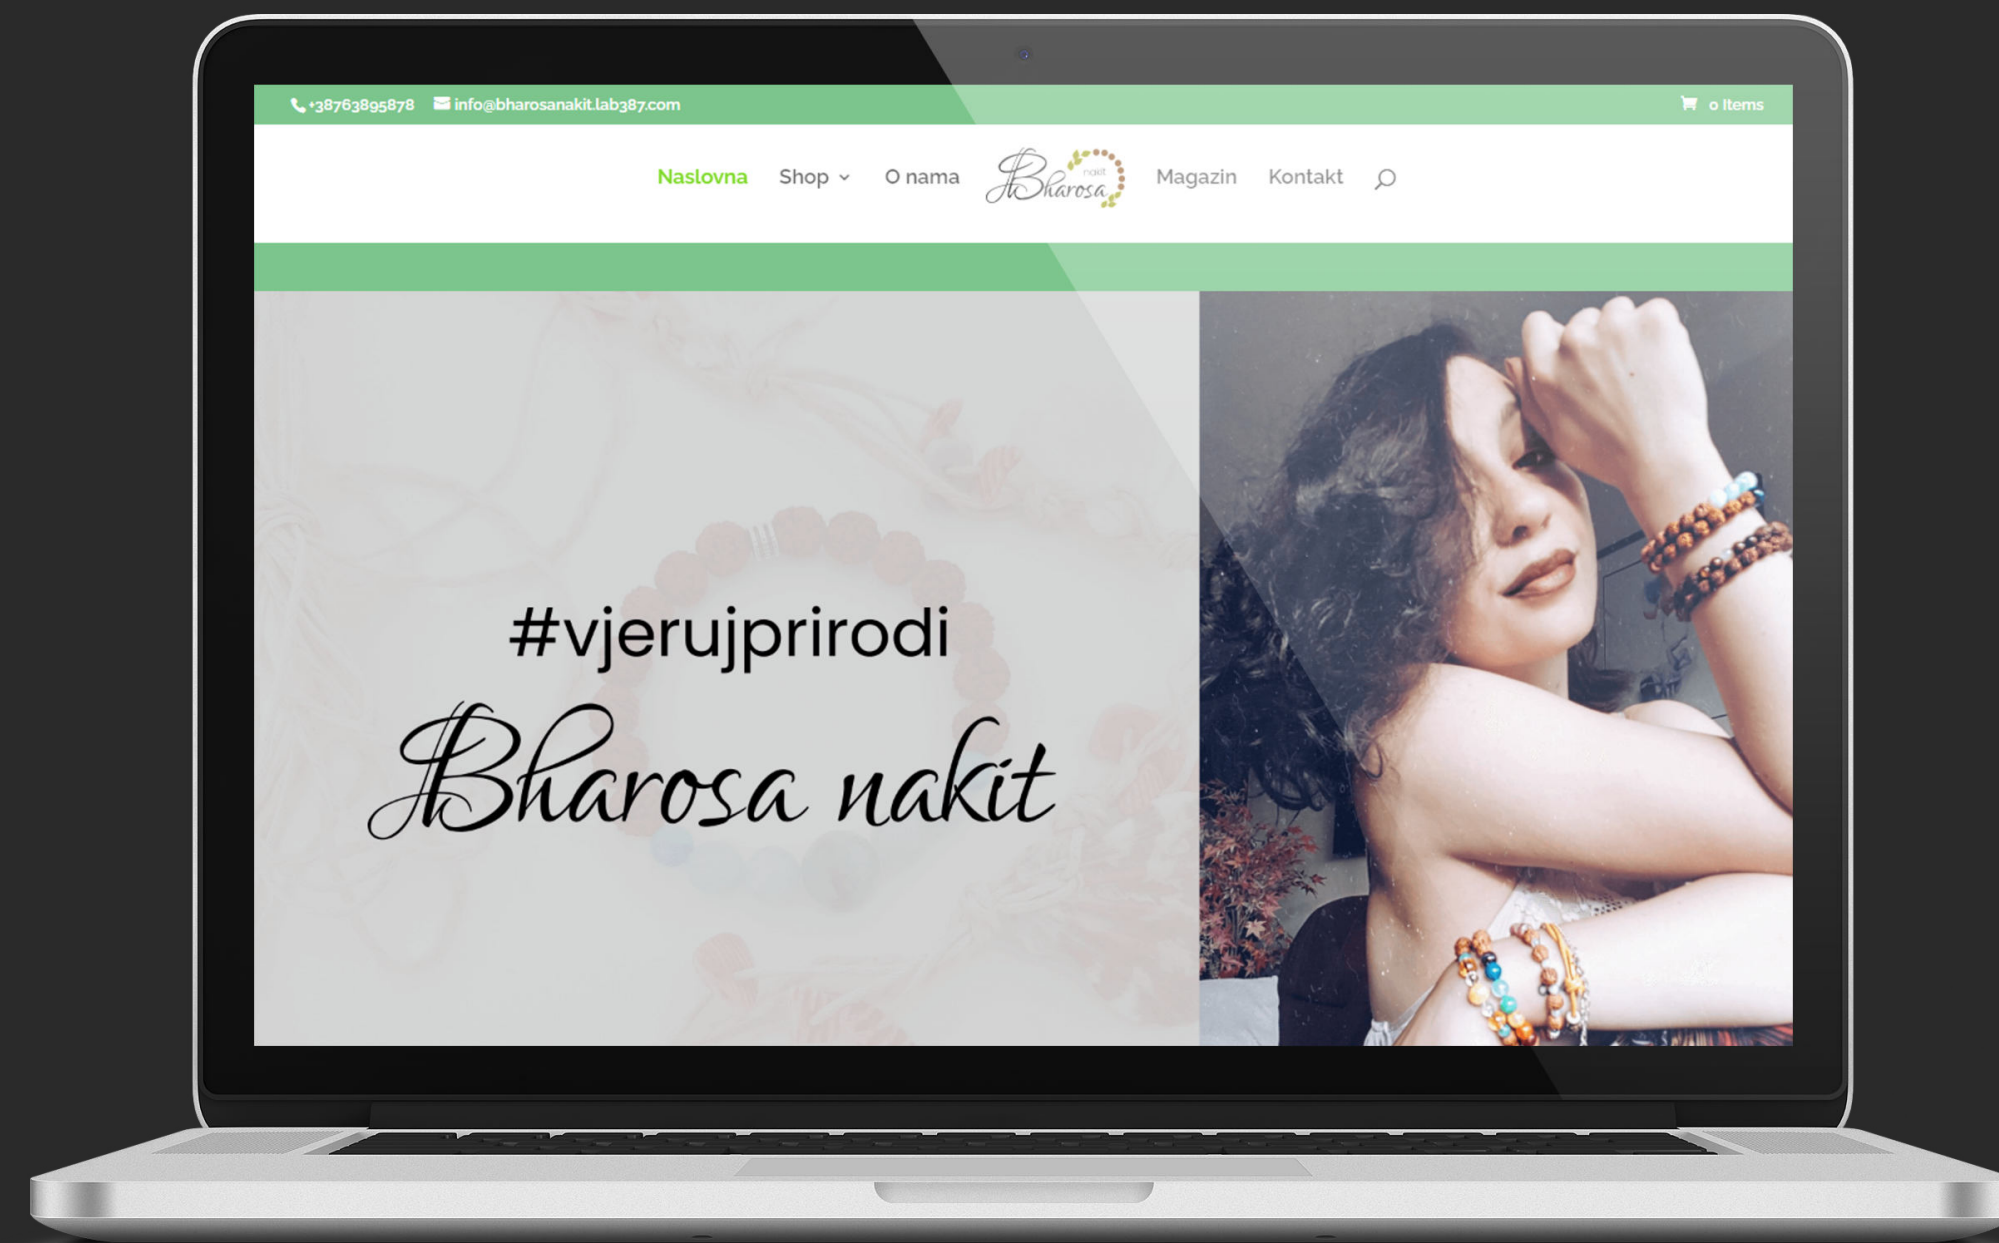

With simple animations and transitions as well as a quality structure, we have introduced a dose of modernity and gave space to all textual and photo content to come to the fore.

We have also implemented a contact form for the client and set up all important contact information.

hrvanje.ba

Bharosa Nakit

bharosanakit.lab387.com

For our client, we have created a modern and bold web shop for the sale of rudraksha jewelry - a special type of tree that grows in Southeast Asia and has a mystical and spiritual significance for many religious groups in the region.

We took white as the basic color, and we marked all the important places within the website with the color of nature - green.

The complete management of products, users and orders has been implemented on the site, and payment via PayPal has been implemented.

Also, a blog entitled Magazine has been implemented within the site so that the client can publish occasional articles related to her products.

Finally, we have integrated with the Mailchimp service to gather potential customers in one list, or send promotional emails.

Heroji dvadesete

For our clients, we created a modern and functional website that aimed to collect votes and award prizes to all heroes in 2020 - the most difficult period of the Covid-19 pandemic.

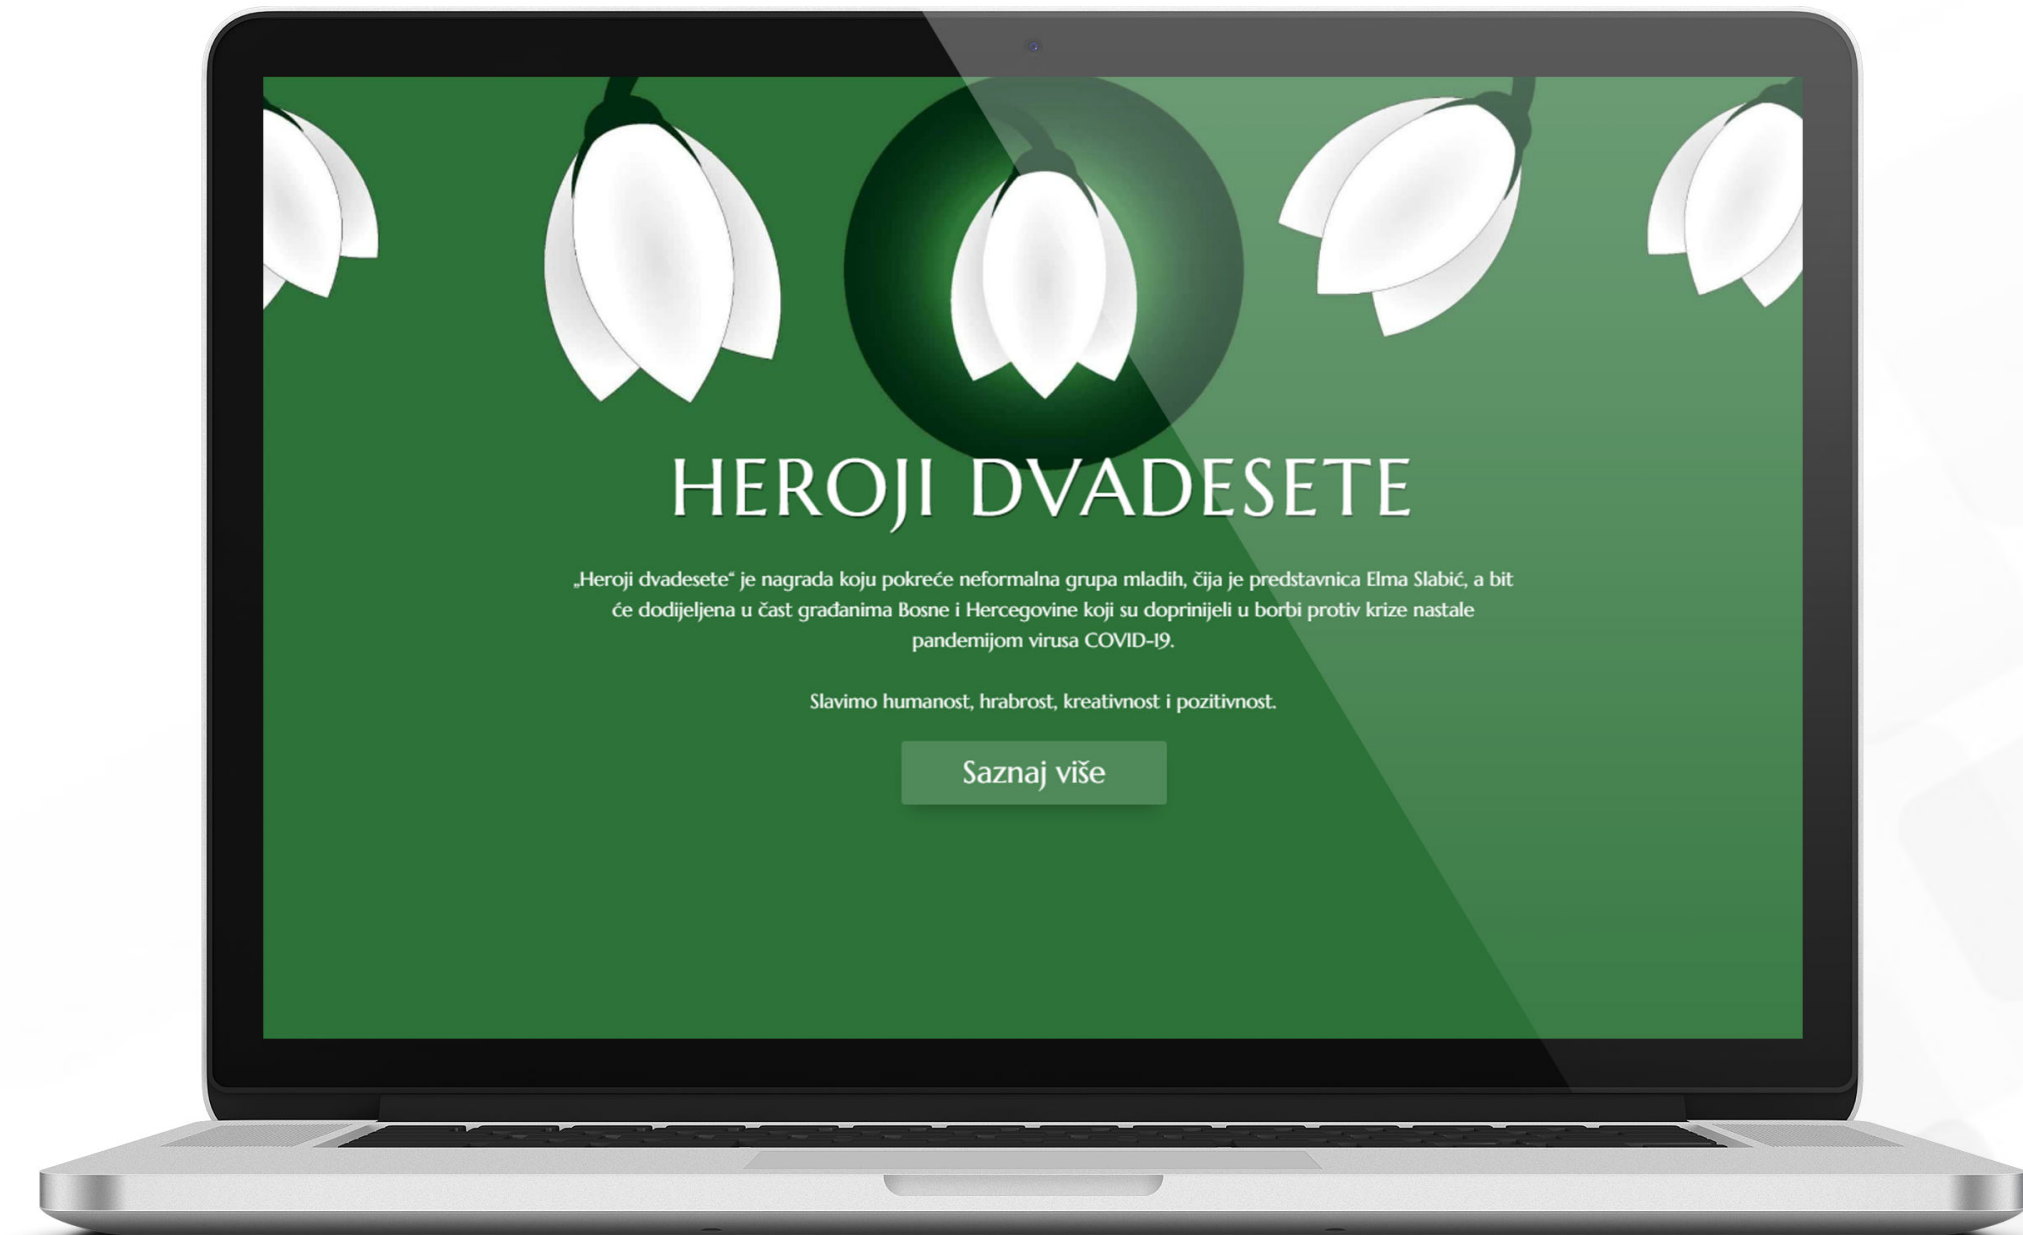

We took white as the basic color, while we marked all important places on the website with the appropriate green color. We implemented voting functionalities for the award candidates themselves, the time period for voting and insight into the number of votes collected and the winners themselves.

This is one of our most visited websites in 2020, which had over 100,000+ visits within a month.

This website was created within the ITAcademy Web Design Studio and is supported by several companies and media houses.

Team:

- Svetlana Saletović - PHP Developer
- Snežana Raonić - PHP Developer
- Biljana Mijić - PHP Developer
- Branko Nenadić - PHP Developer
- Amar Bešlija - Team Leader

herojidvadesete.lab387.com

Apartman Aranza

apartmanaranza.lab387.com

For our clients we have created a modern and dynamic website with the aim of presenting all the information about Apartment Aranza as well as online booking options.

We chose white for the basic colors, and we marked all important places on the website with blue and orange.

Within the site, we have implemented an interactive display of the apartment plan where each room contains its own photo, description and call to action, which opens by clicking on the room itself.

We have also implemented the functionality of the map with all interactive content in the vicinity of the apartment, contact form and the possibility of online booking.

Online reservations have the option of apartment occupancy management, interactive calendar, overview of all reservations and management of each individual reservation with automated sending of email notifications.

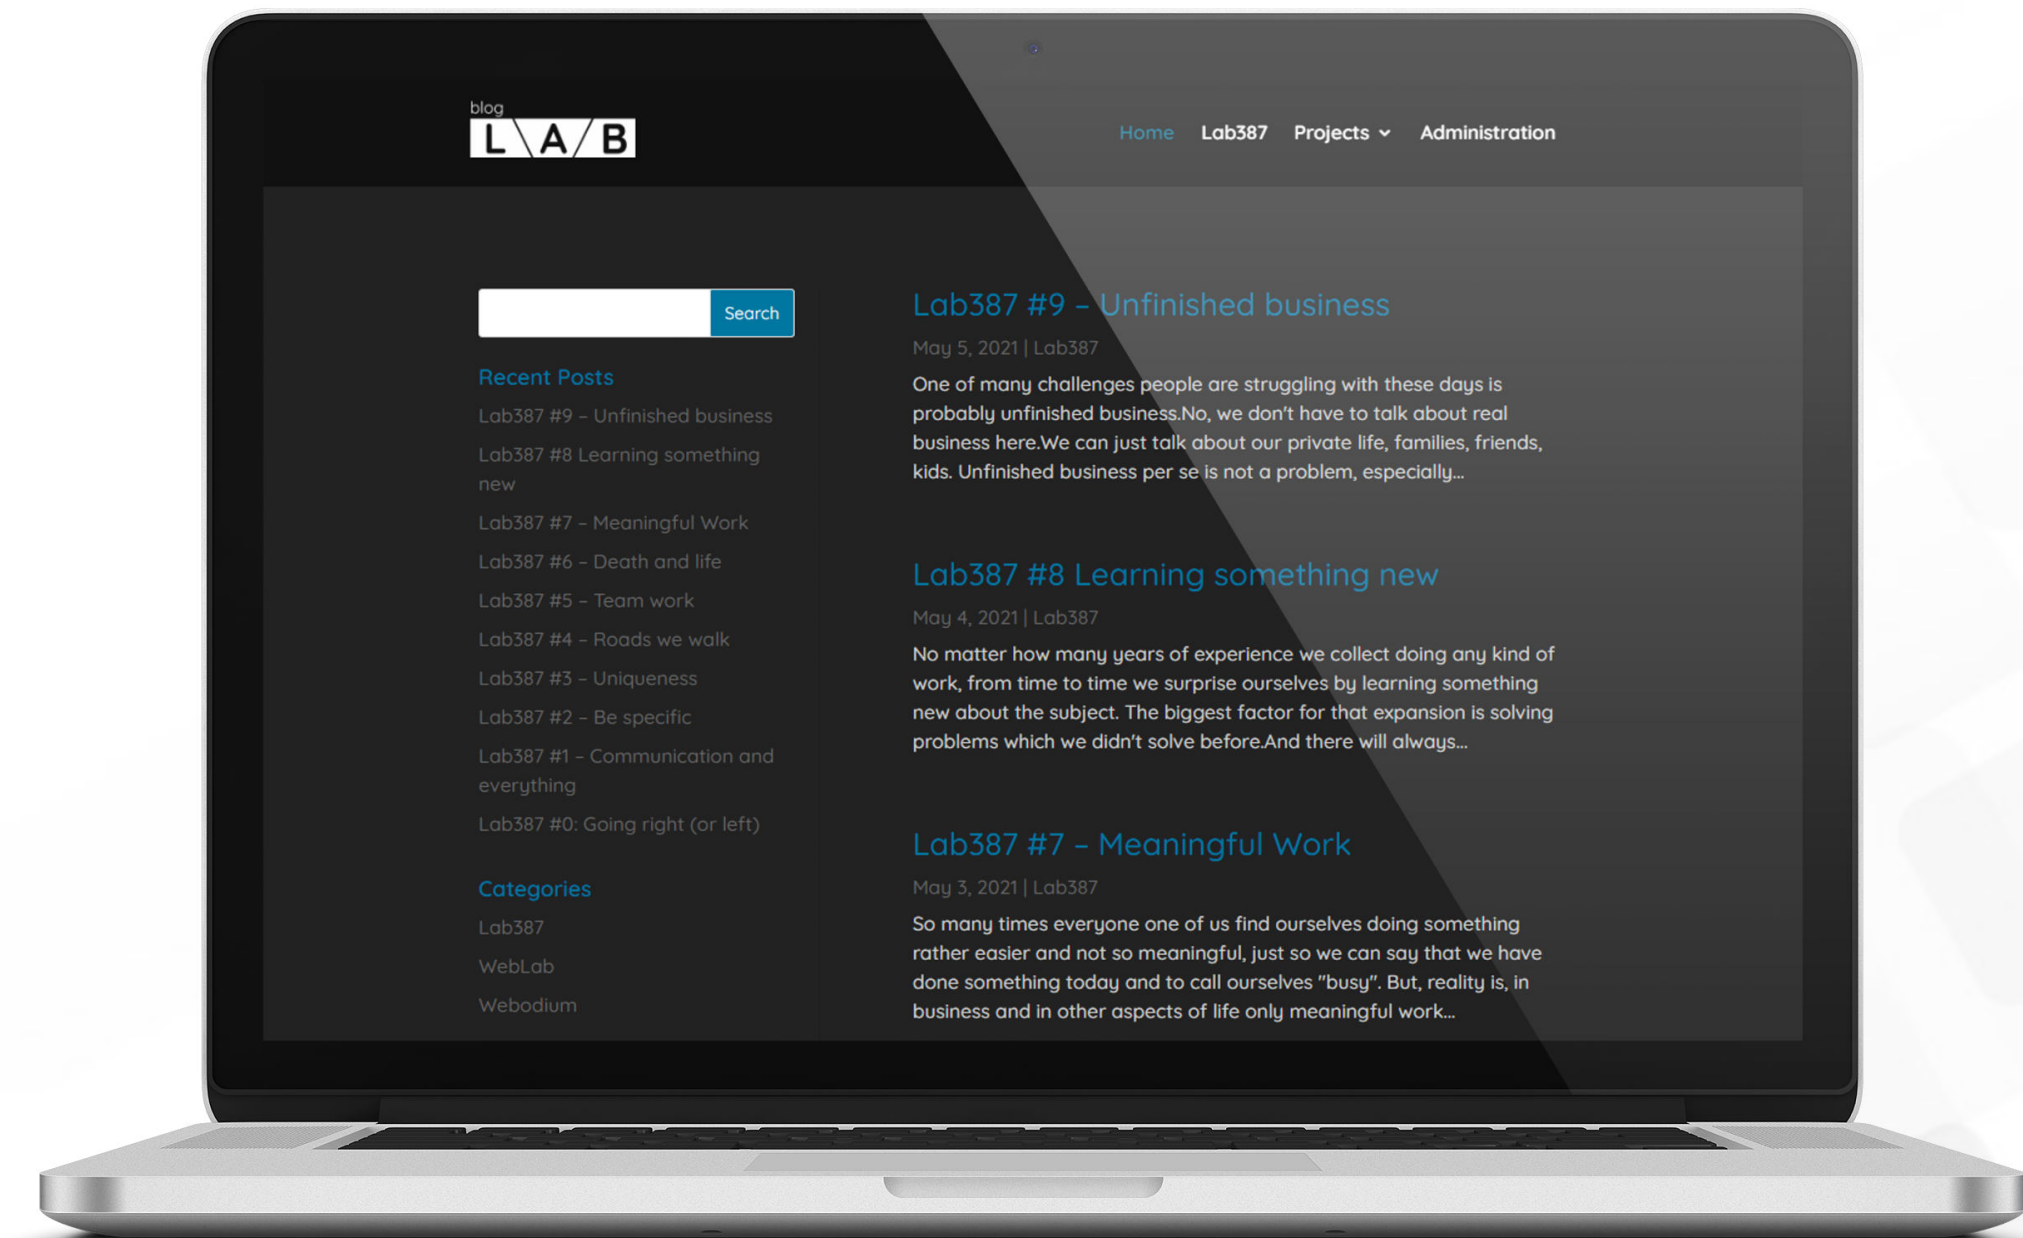

Lab387 Blog

For our company, we have created a modern and simple blog to display various interesting posts related to all areas of work of the Lab387 company.

Through links within the menu, we linked the Lab387 blog to the main website to allow more visits to it.

We have implemented the ability to search for the complete blog, share posts via a large number of social networks, display the latest posts as well as the categories in which there are blog posts.

For the basic colors, we took dark gray, black and white, and we adjusted the font to the main font of the company Lab387.

blog.lab387.com

Izgradi dom

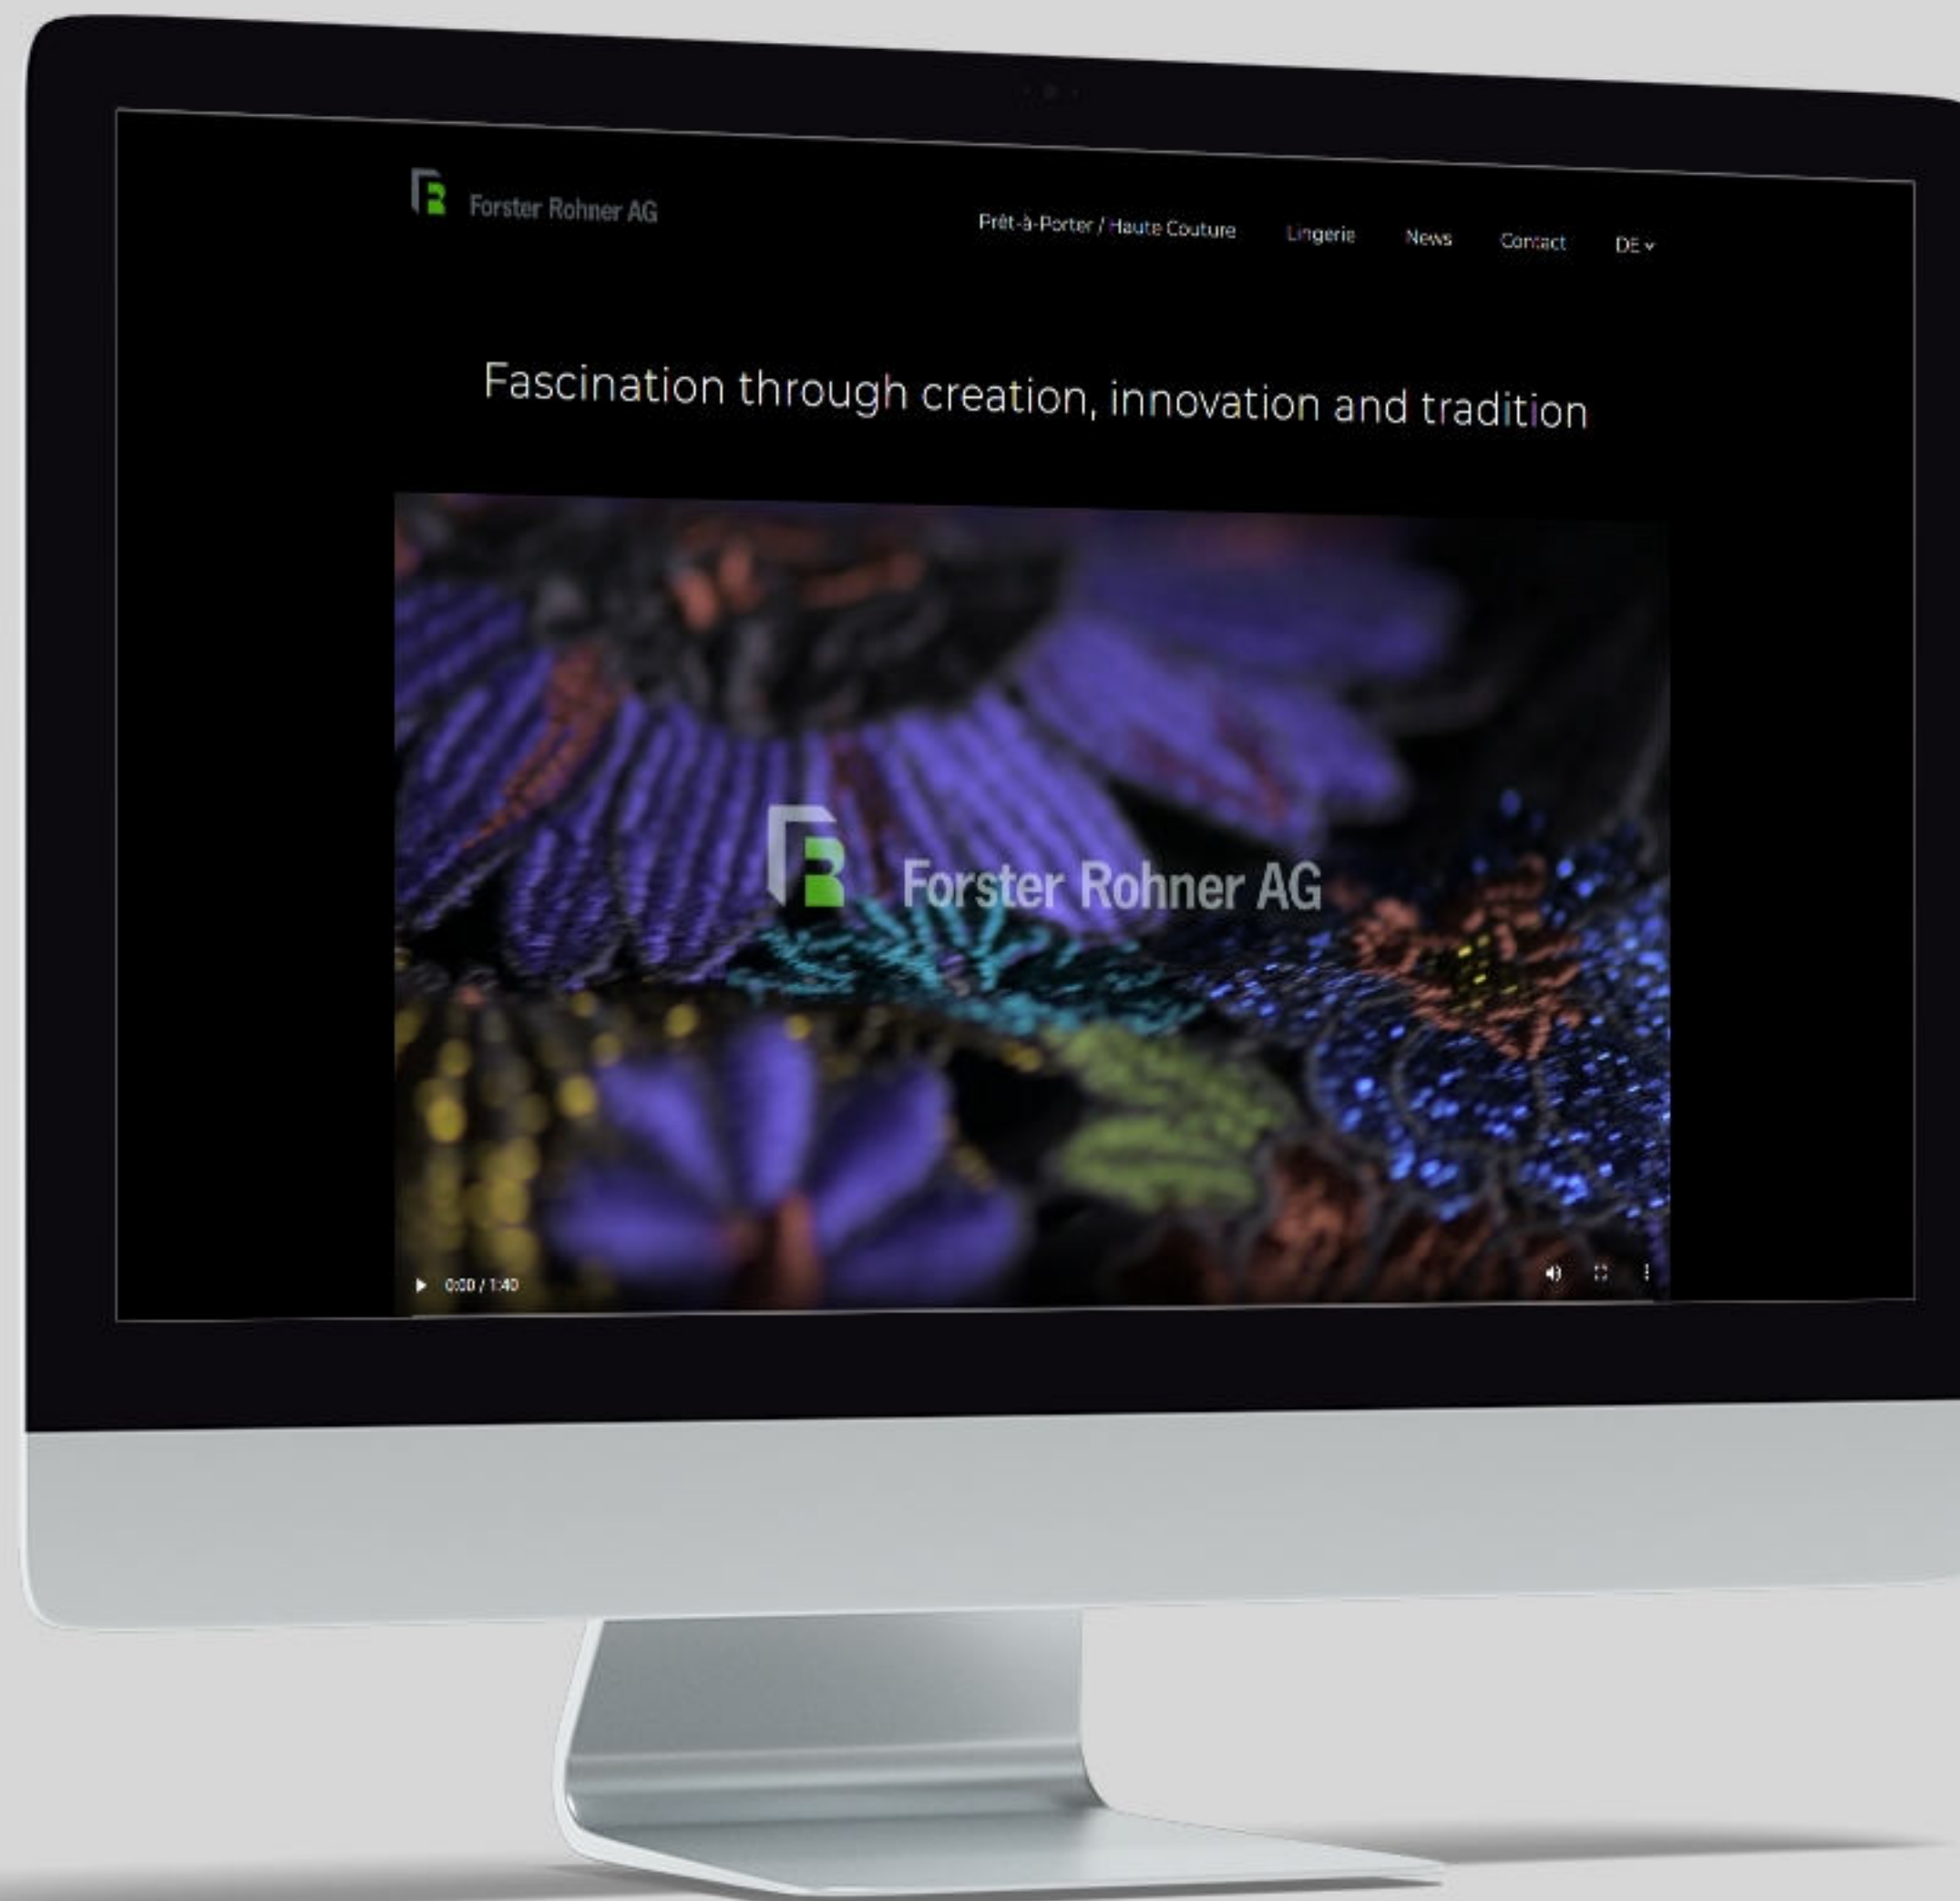

izgradidom.lab387.com

"Build a home" is our first website created by our CEO back in 2016, at the very beginning of learning and working.

Although it is outdated by all modern standards and does not have the best user experience, it still represents our beginning, so we posted it in its original condition.

With it, we want to remind our clients and ourselves that growth and development is always our primary goal, looking at all other websites and web applications within our portfolio.

If you want to see the modern edition of this website, visit izgradidom.com and see where we are today.

It is an indescribable pleasure to work with clients such as Forster Rohner AG. Over a hundred years of tradition in running a company and working with the embroidery and fashion industry has really taught us a lot and given us the wings to solve their business problem.

For our clients, we have created an unprecedented and modern 3D web application for internal use during the process of working on any type of underwear. The work on the initial phases of the project lasted 8 months where we went through the phases of conceptualization, design and development and the testing phase where we tested and optimized the 3D web application together with the client.

For clients, we have extensively documented the process of working on the application, the complete way of using the application and the code itself, in order to leave room for this innovative application for very simple and easy upgrades (200+ pages of A4

Web Development

Below you can see all the web applications we have created for our clients and us. There is a detailed description for each application, so you can see what are the main characteristics and functionalities, ie what problems and requirements of clients and our company we have successfully solved.

On the technical side, applications are mostly created on the [PHP web stack](#), using [HTML](#), [CSS](#) i [JavaScript](#) for the frontend, while [PHP](#) and [MySQL](#) were used for the backend. The [Apache/NGINX](#) combination is used for the web server itself, and on some OpenLiteSpeed.

For some of the applications we also used WordPress where we did custom upgrades via plugins and themes, which can be seen in the descriptions of these applications.

All active applications have security protections, backups and regular updates when it comes to [WordPress](#), and use [CDN](#) and optimized photo / video.

BBCroatia

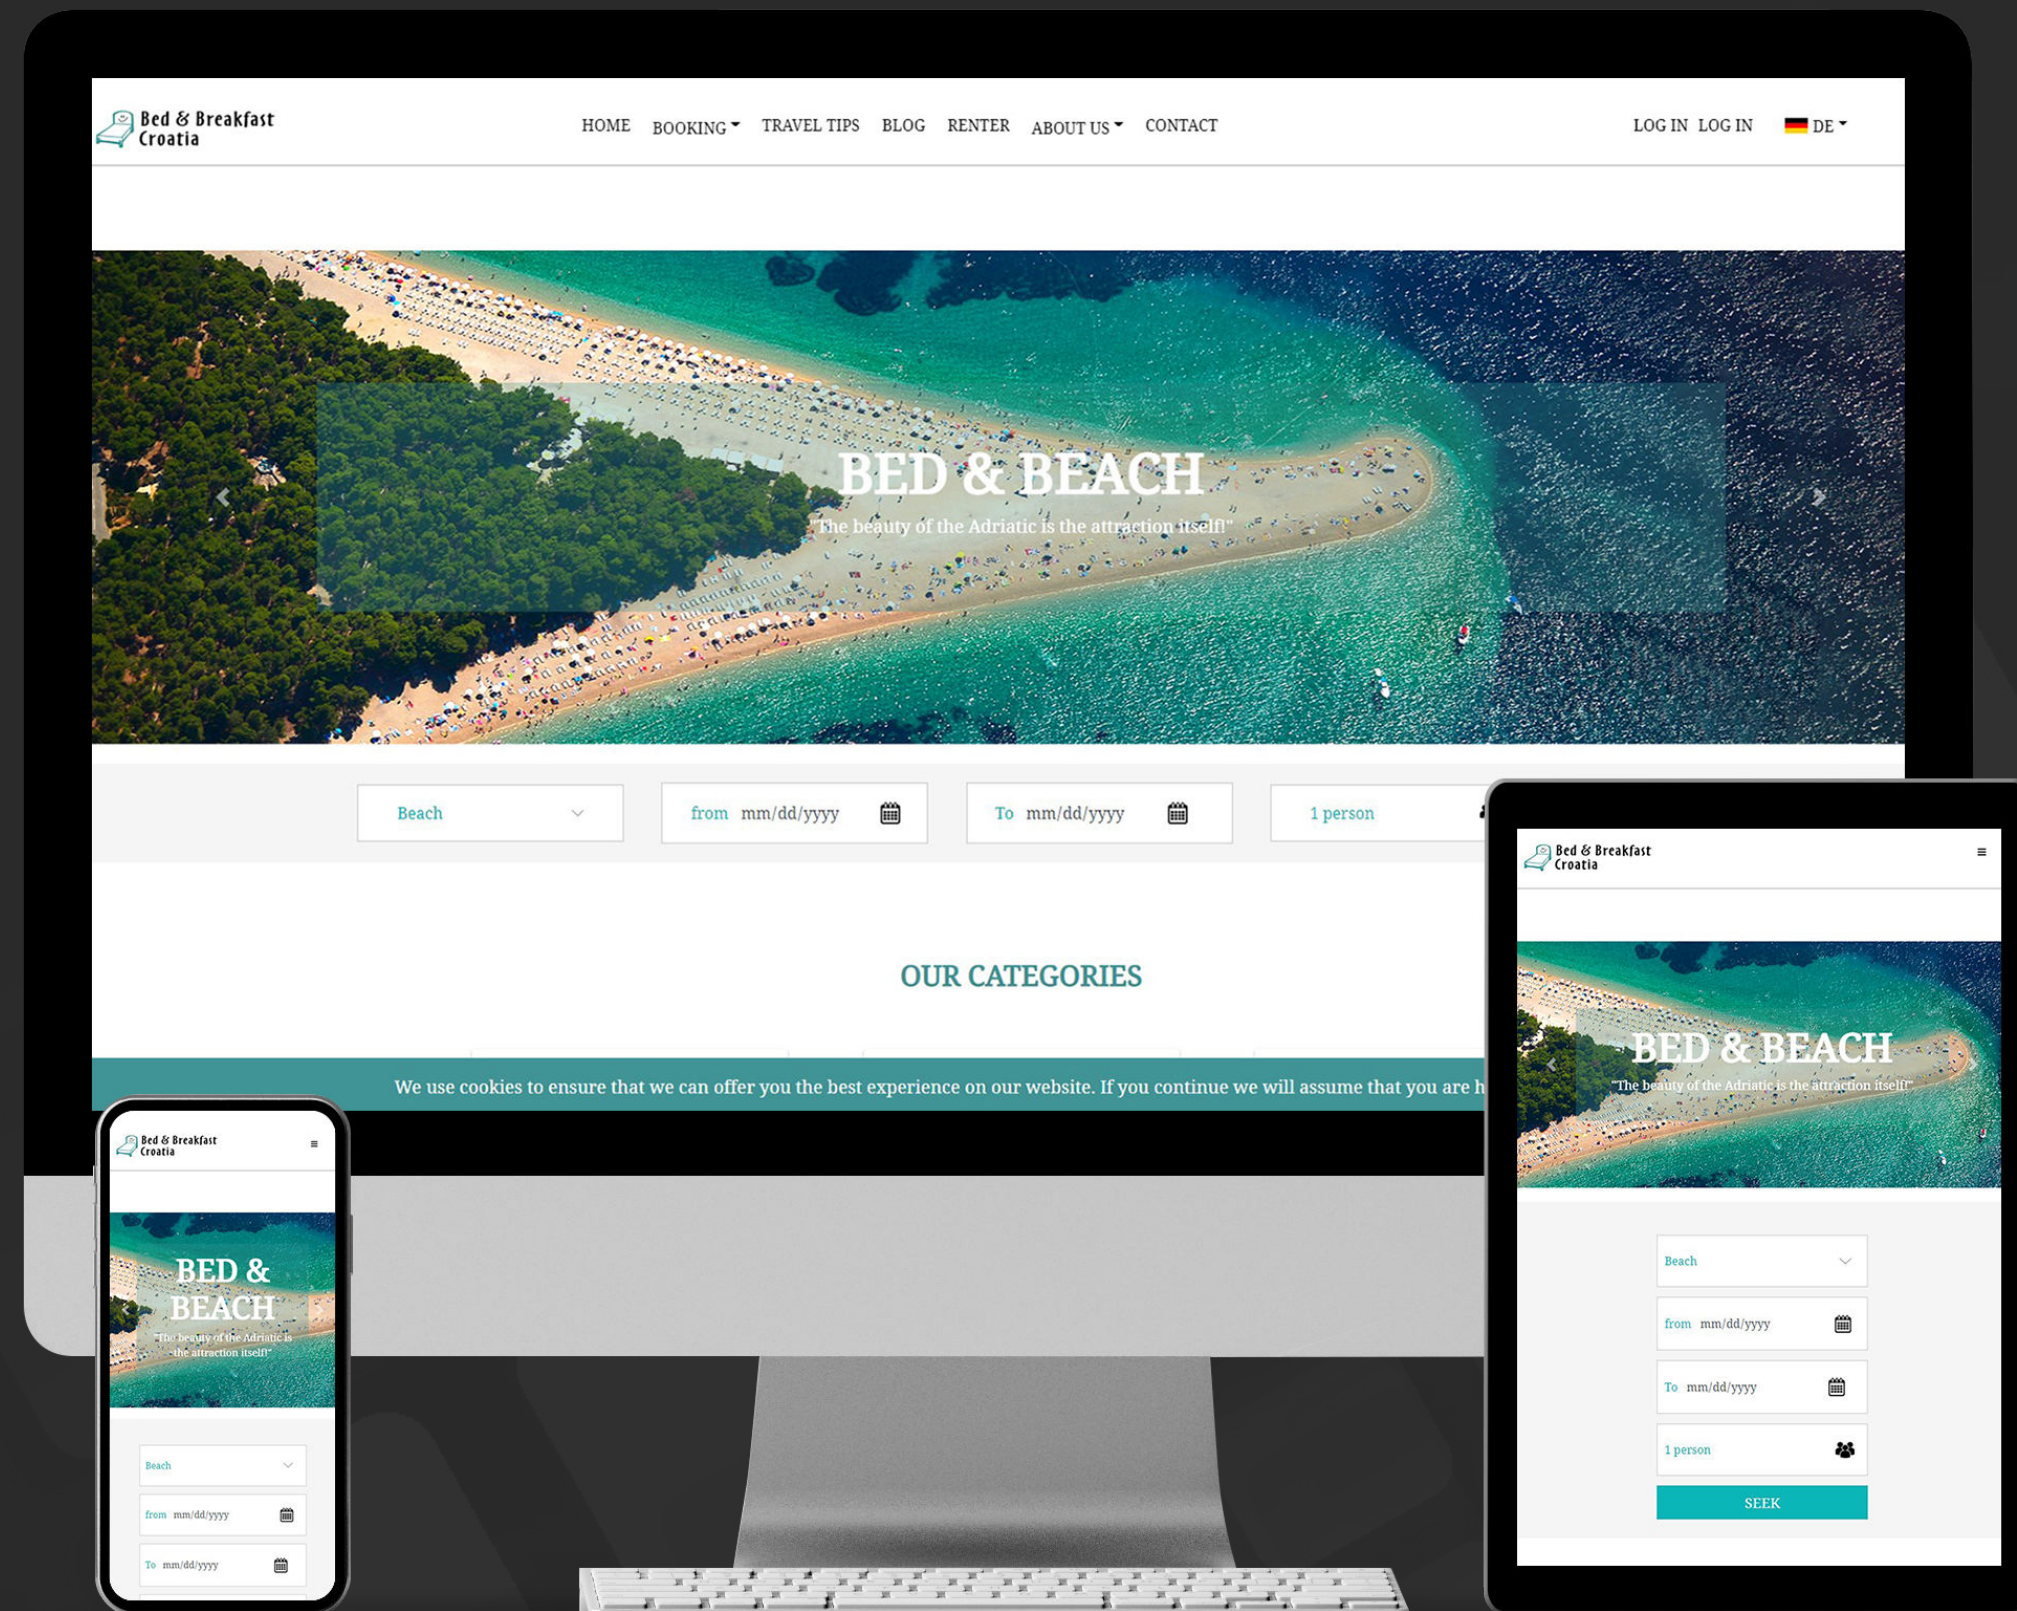

For our clients we have created a modern and interactive web application for management and online sales / reservations of accommodation within the company Bed and Breakfast Croatia.

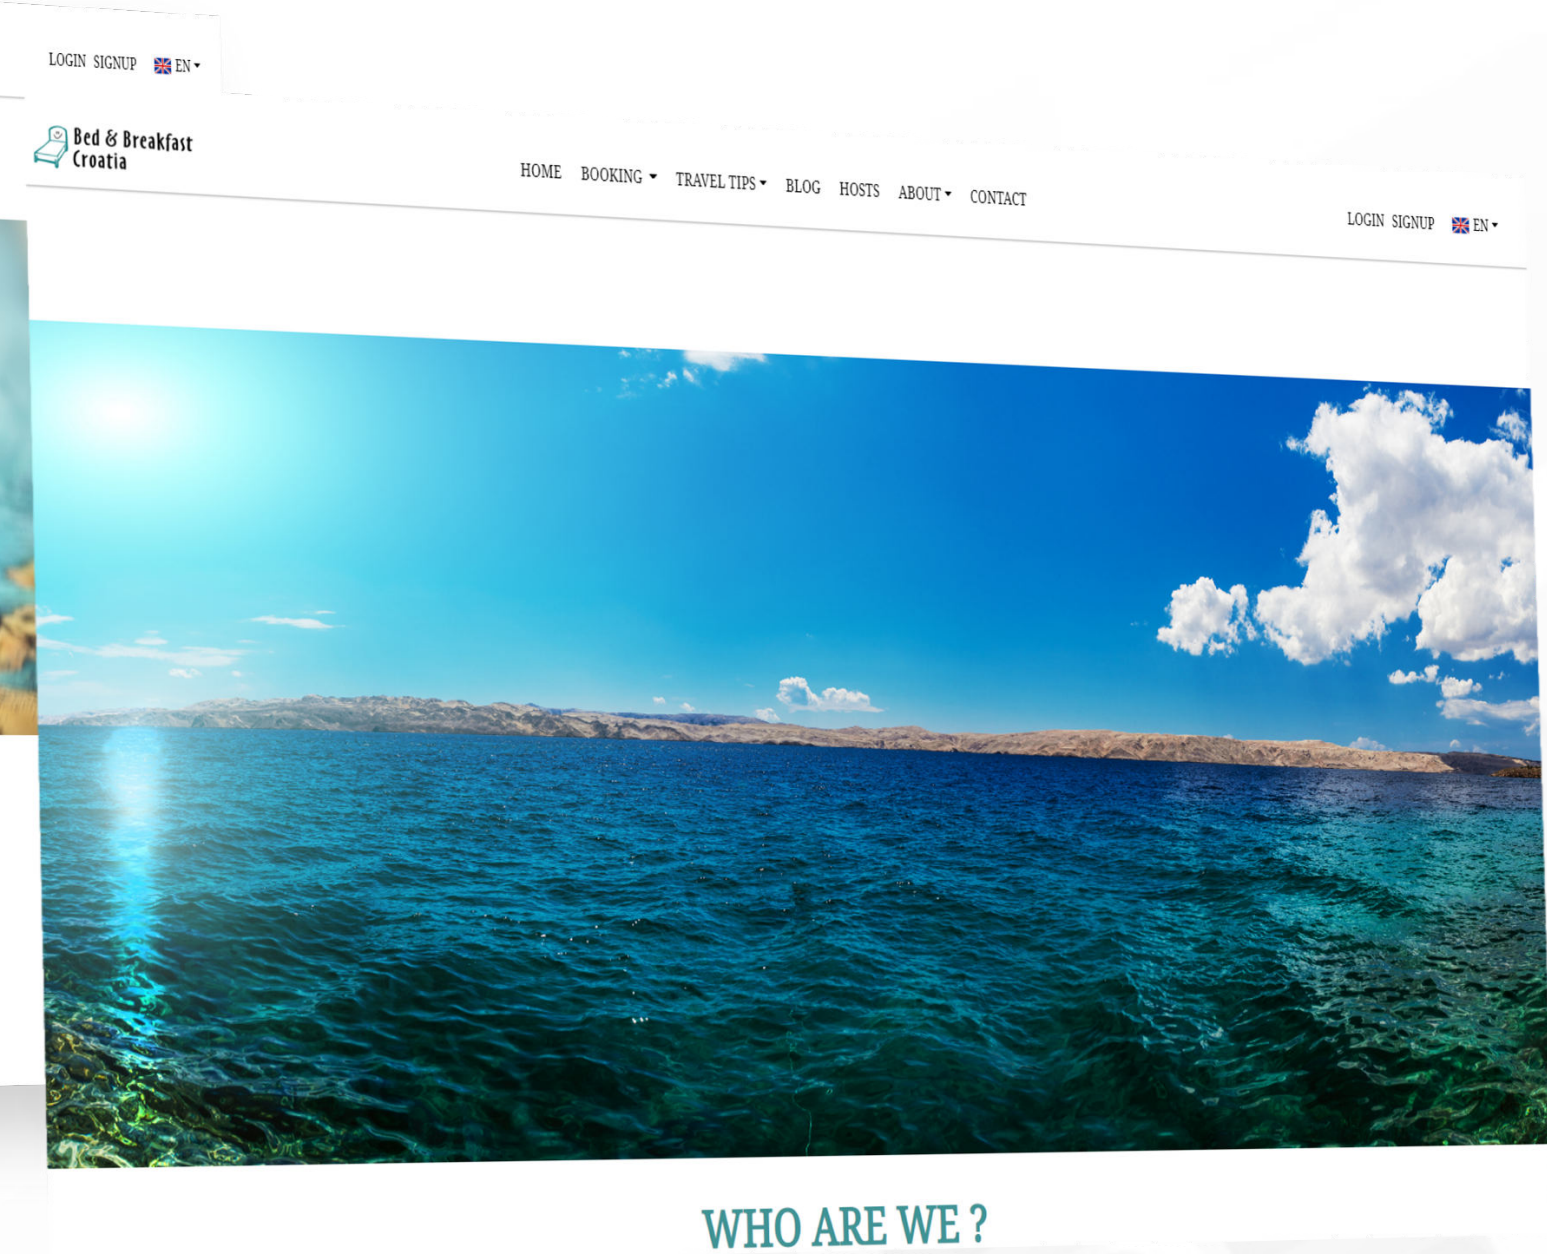

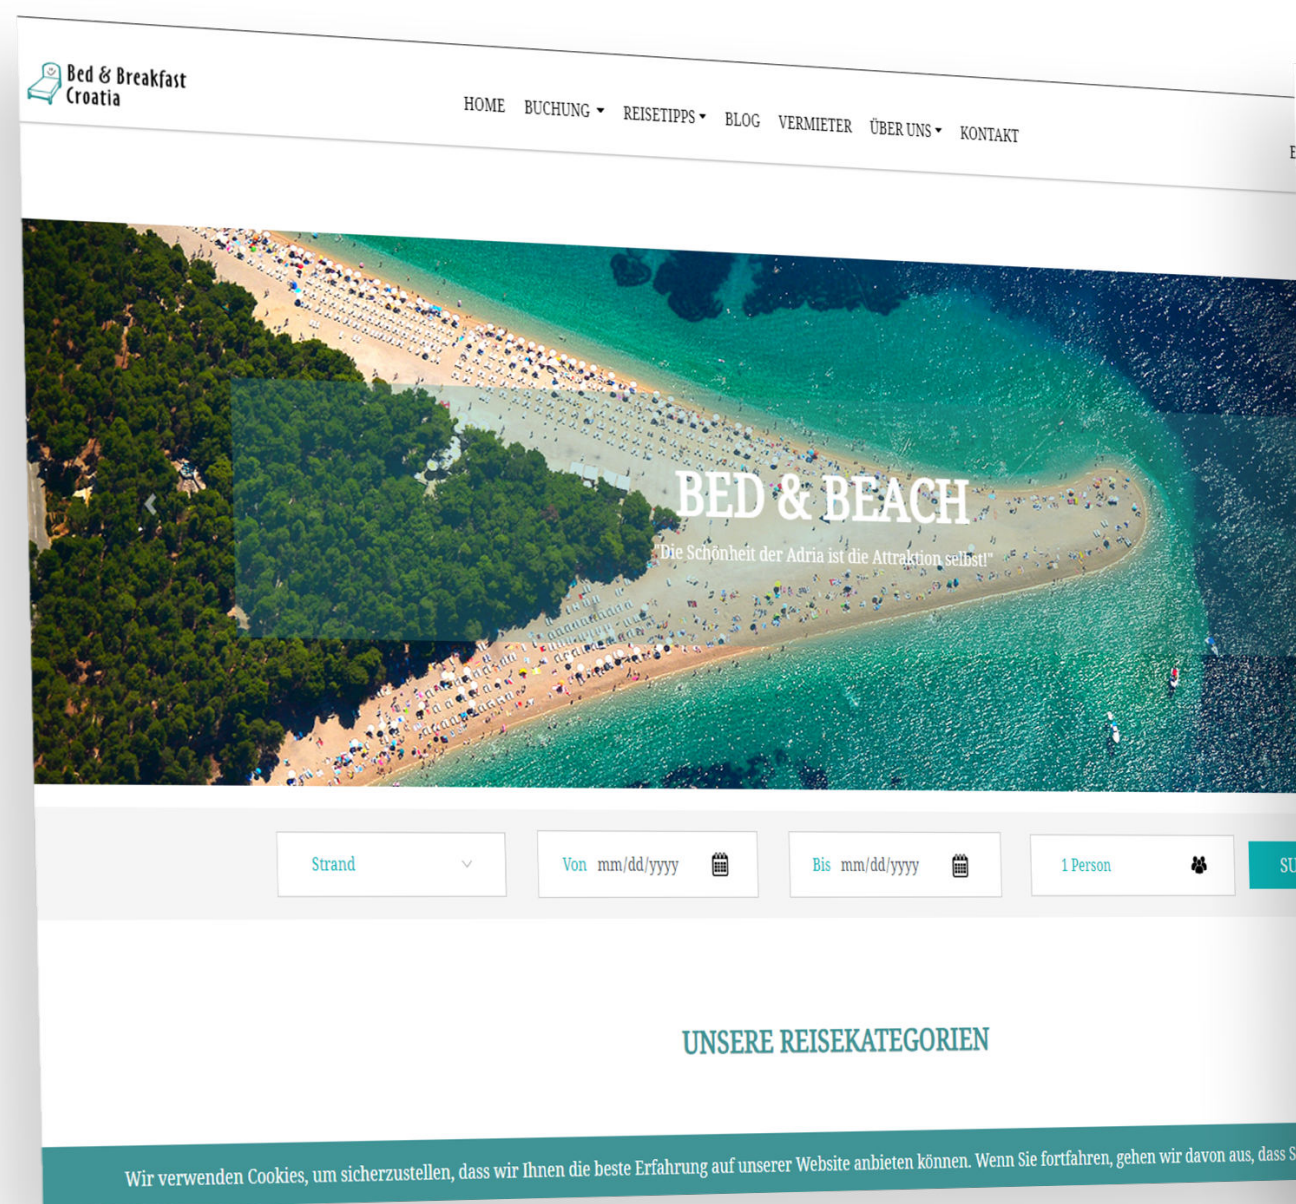

The complete web application was created using **HTML**, **CSS**, **JavaScript**, **PHP** and **MySQL** mockup and programming languages, where we were guided by the design we received from the client in collaboration with the graphic designer.

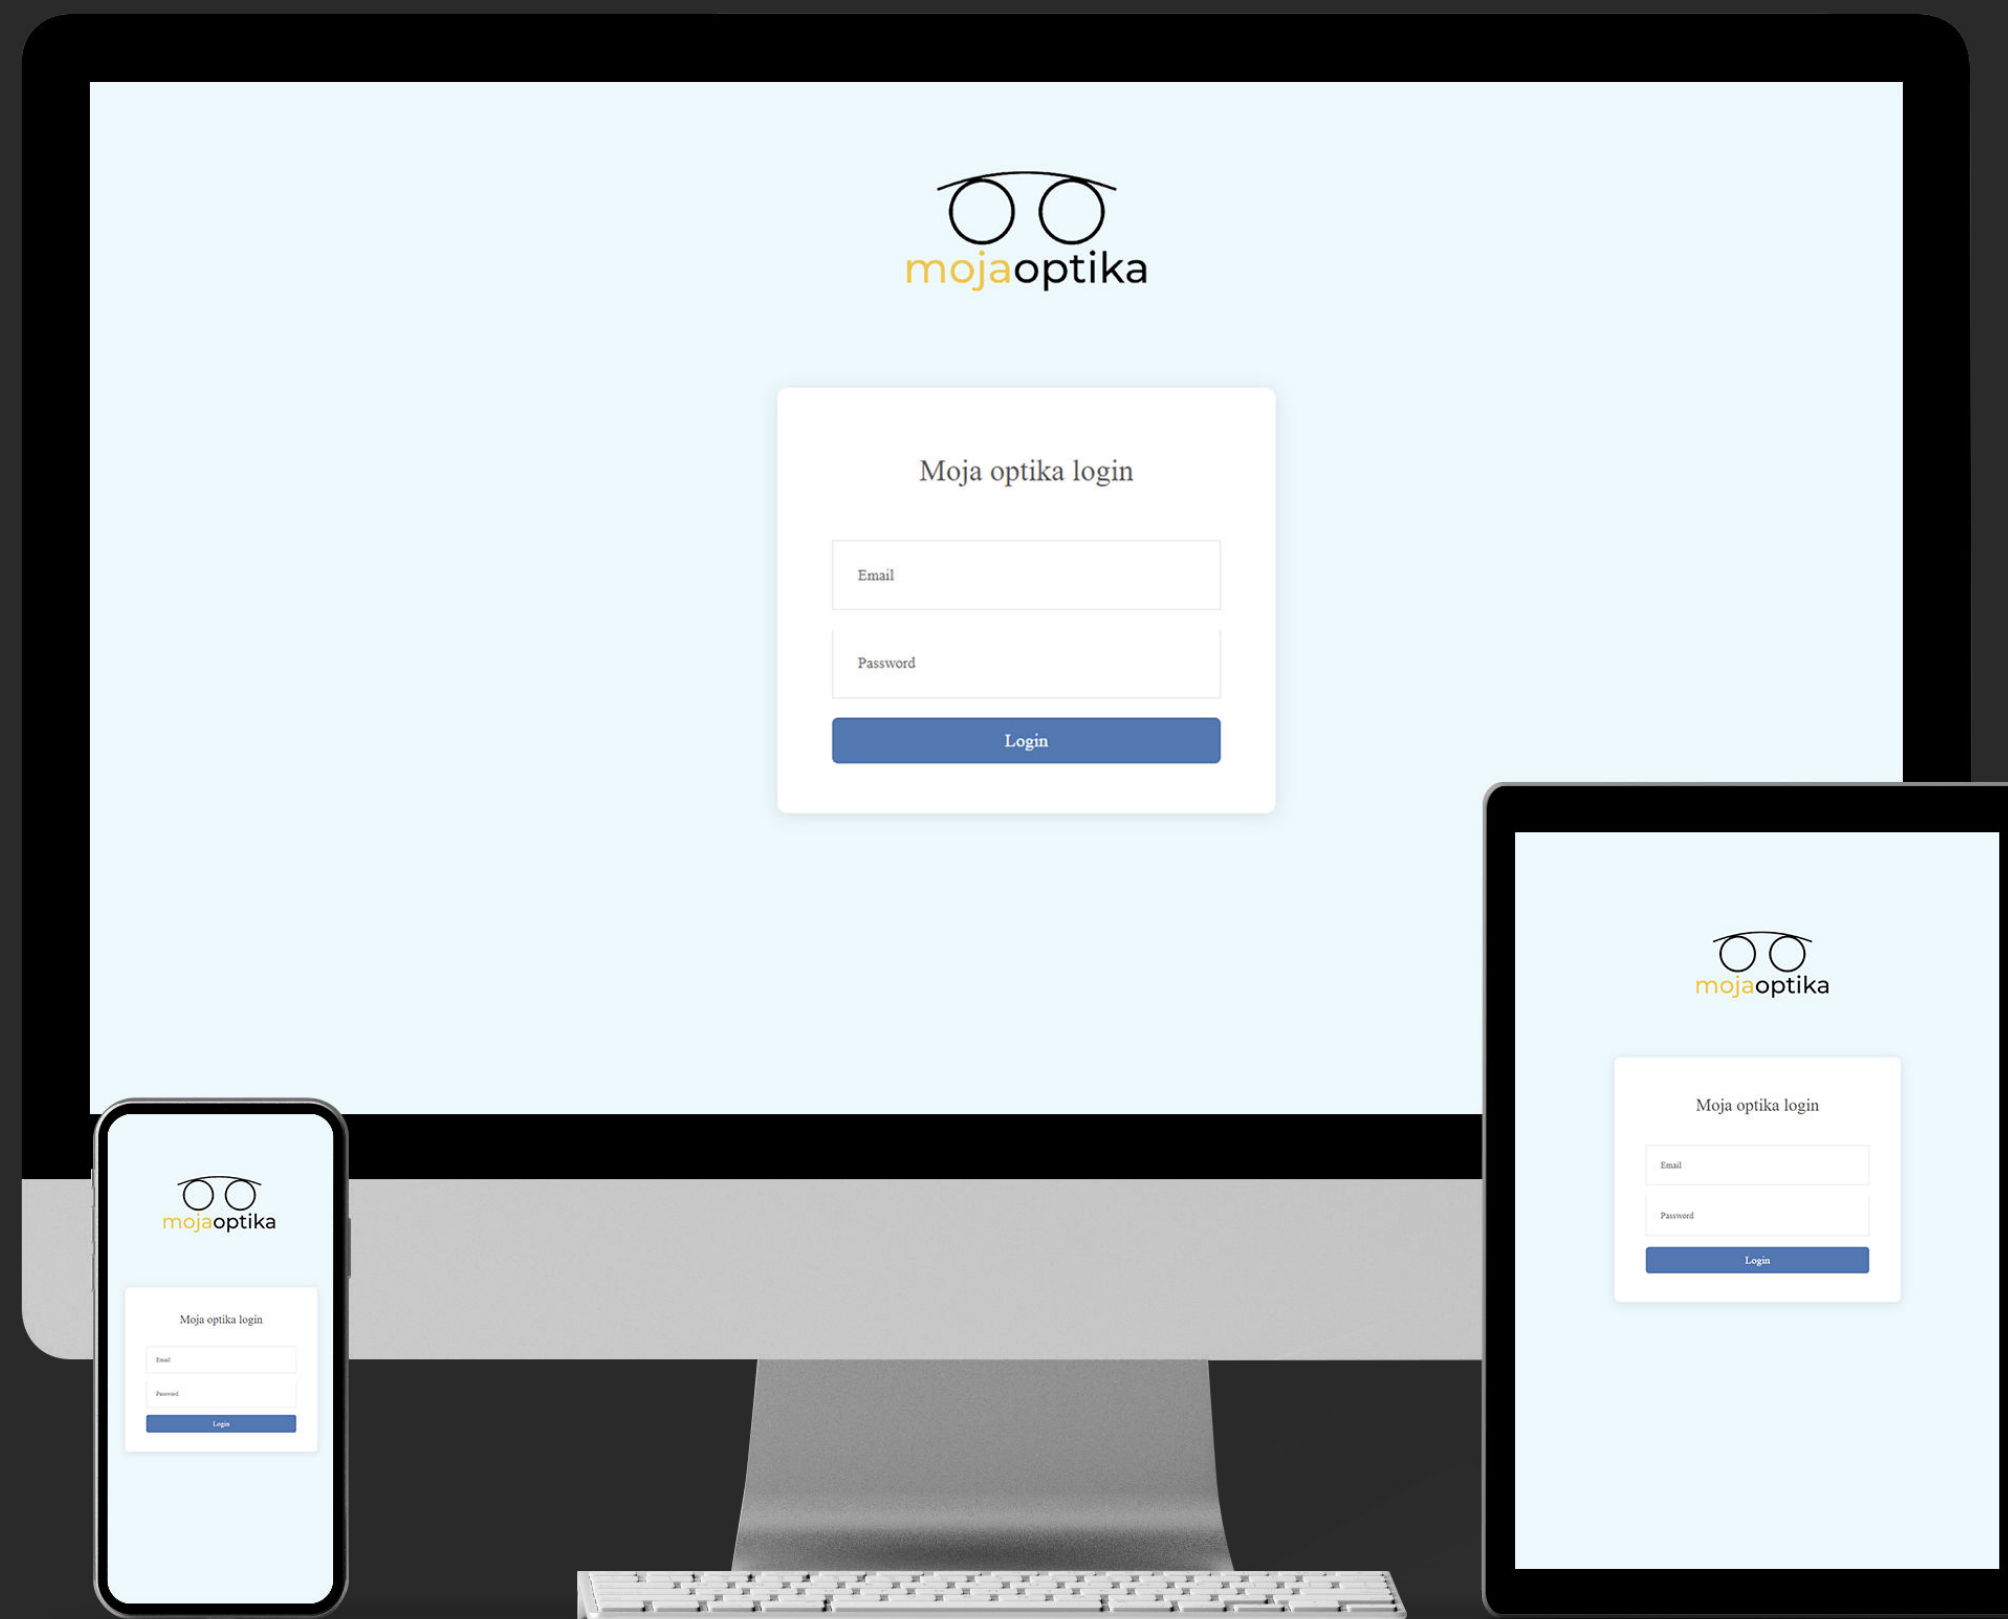

The application has all the possibilities of registration and display of accommodation, management of accommodation data, management of renting and paying for accommodation as well as customer management, cancellation of reservations and the like.

We have also integrated the web application with Google Maps for interactive display of accommodation, PayPal for payment via the web, and we have integrated web editors to allow clients to independently edit a large number of information pages.

bbcroatia.com

Moja Optika CRM

For our clients, we have created a modern, interactive and simple CRM that is tailored to the company and the type of industry.

The complete web application was created using HTML, CSS, JavaScript, PHP and MySQL mockup and programming languages, where we worked with our own design.

The application has all the capabilities of management (entry, display, editing and deletion) of users, shops, products, customers and sales themselves.

We have adapted all the entities of this custom CRM solution to the company by inserting the possibility to collect all additional information such as diopters for the customers.

Color Clinic Adventsspiel

For our clients, we created a modern and interactive web application whose purpose was to promote the Color Clinic Tattoo studio through a prize game.

The web application was created using **HTML**, **CSS**, **JavaScript**, **PHP** and **MySQL** mockup and programming languages.

The application has the ability to manage the prize pool entered into the database, manage the ability to receive any of the prizes (percentage of opportunities), and the ability to collect data from users, send automatic email notifications and disable the user to play more than twice a day.

This app is one of our most visited apps from 2019 with over **50.000** visits.

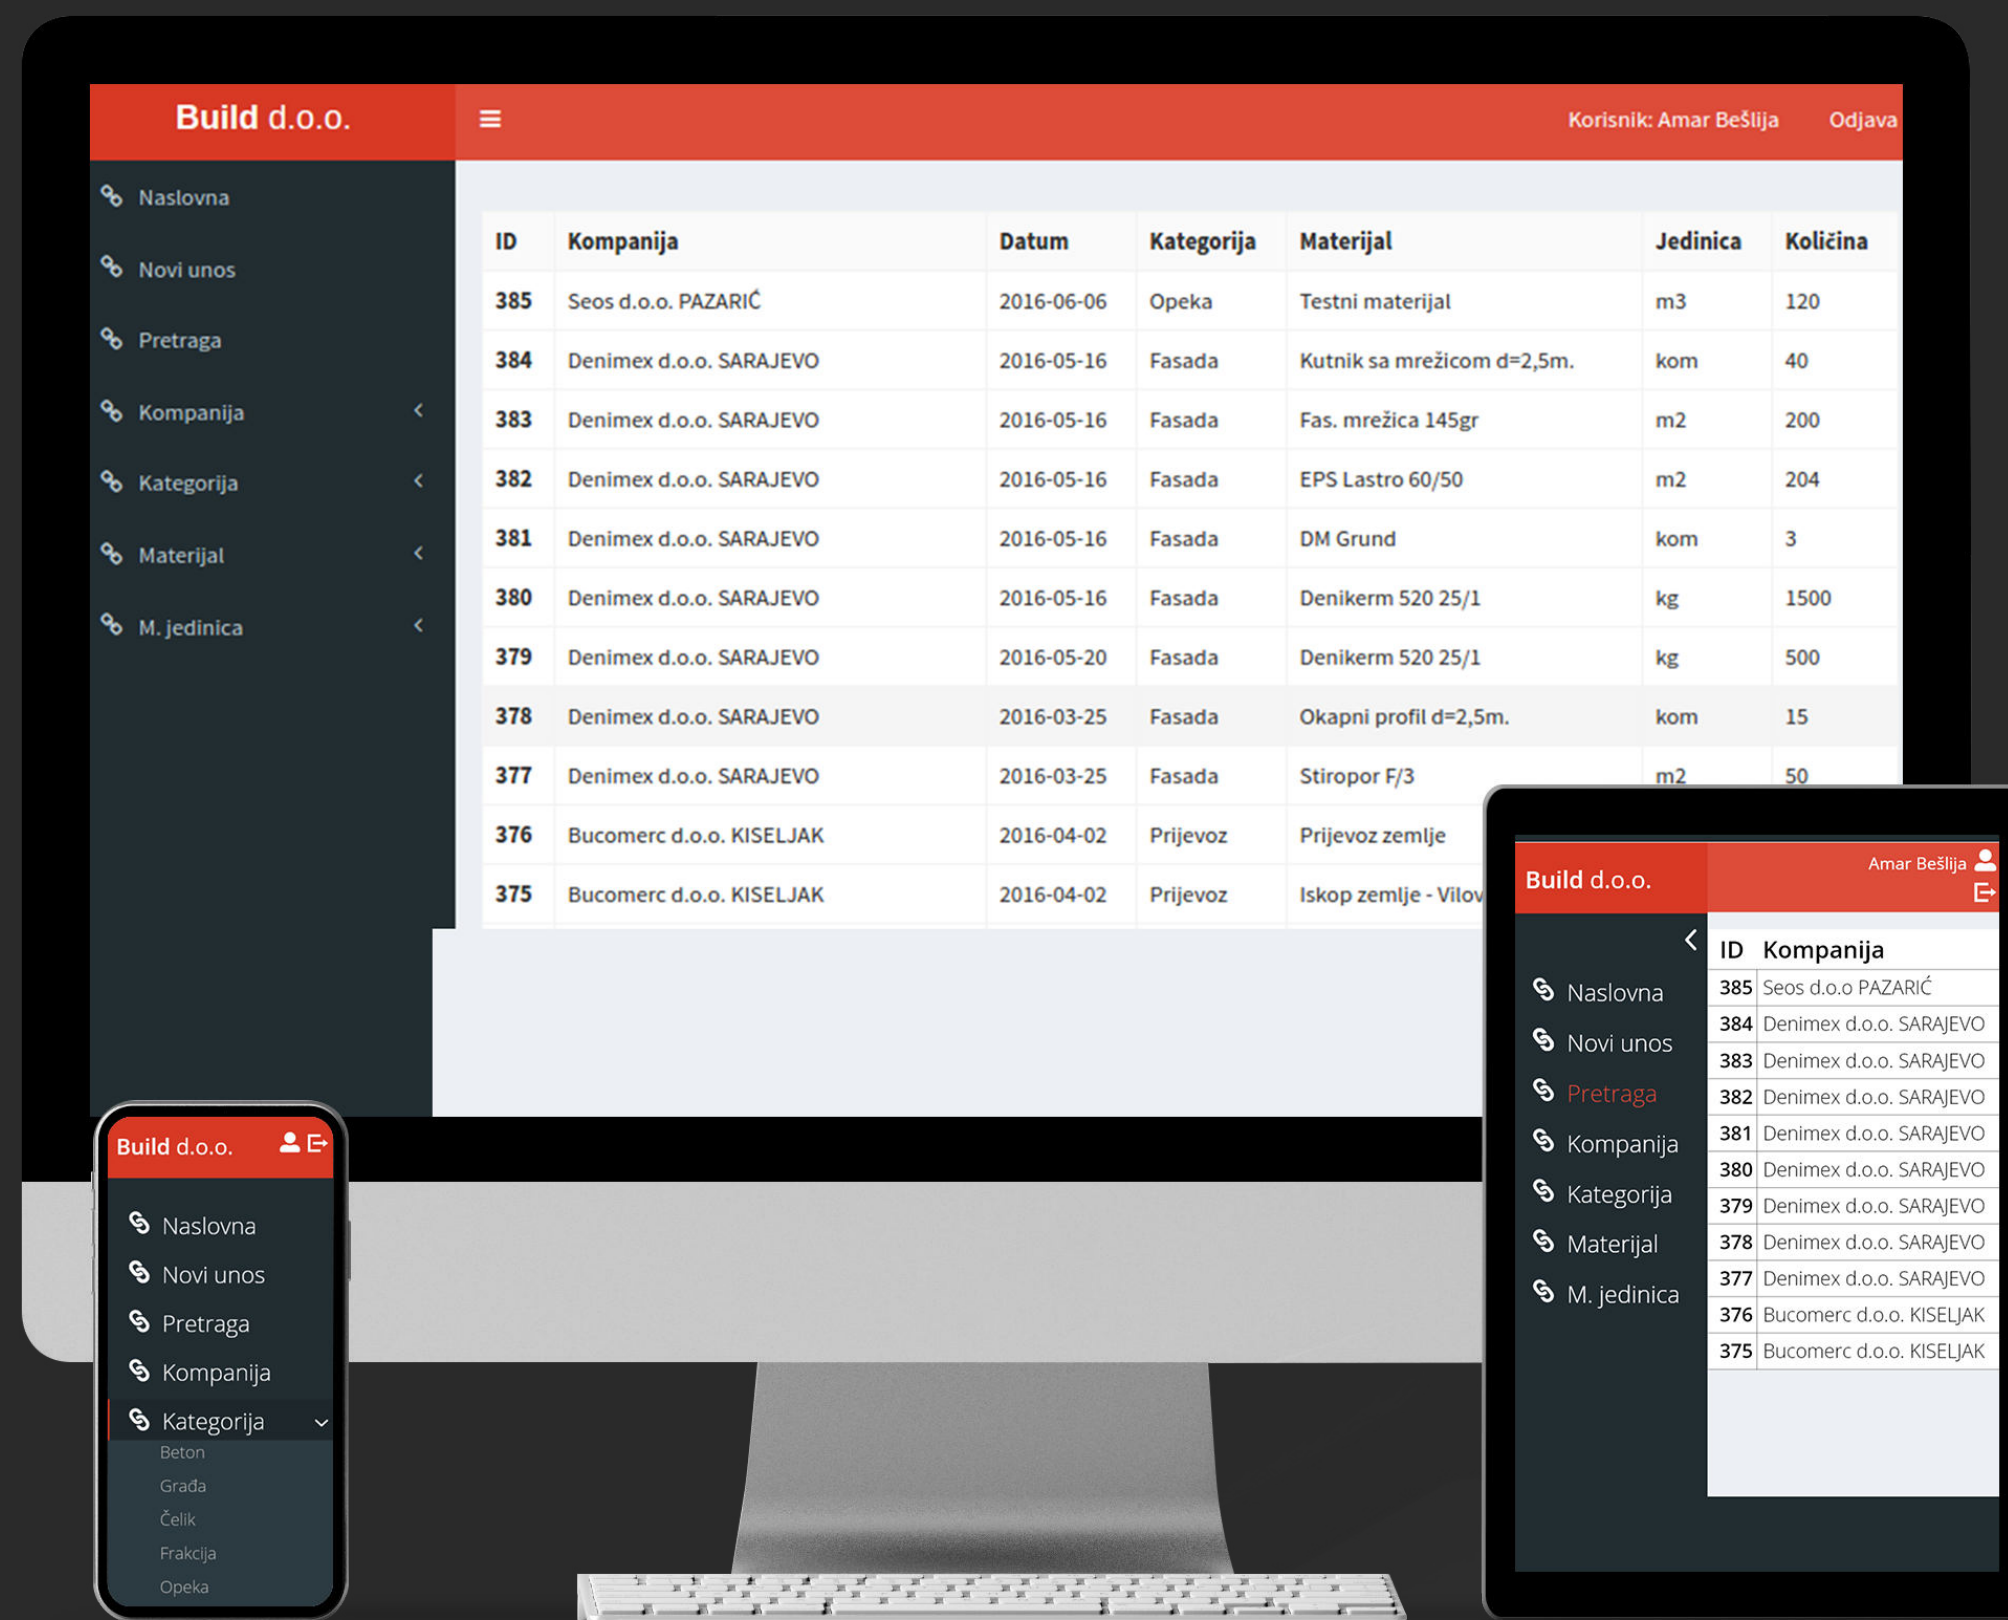

Created withinDom Collection d.o.o.

Team:

- Amar Bešlija - Web Developer
- Šejla Bratić - Designer
- Edita Tahtović - Copywriter

Build – Aplikacija za otpremnice

For our clients, we have created a modern and interactive web application whose purpose is the management of delivery notes of a construction company.

The web application was created using **HTML**, **CSS**, **JavaScript**, **PHP** and **MySQL** mockup and programming languages.

The application has the ability to enter data from the delivery note, display and filter all entered delivery notes by companies, quantities, date and the raw material / material / service.

Certainly, the application also has the ability to export data from the application, most often in **PDF** format.

Admin application

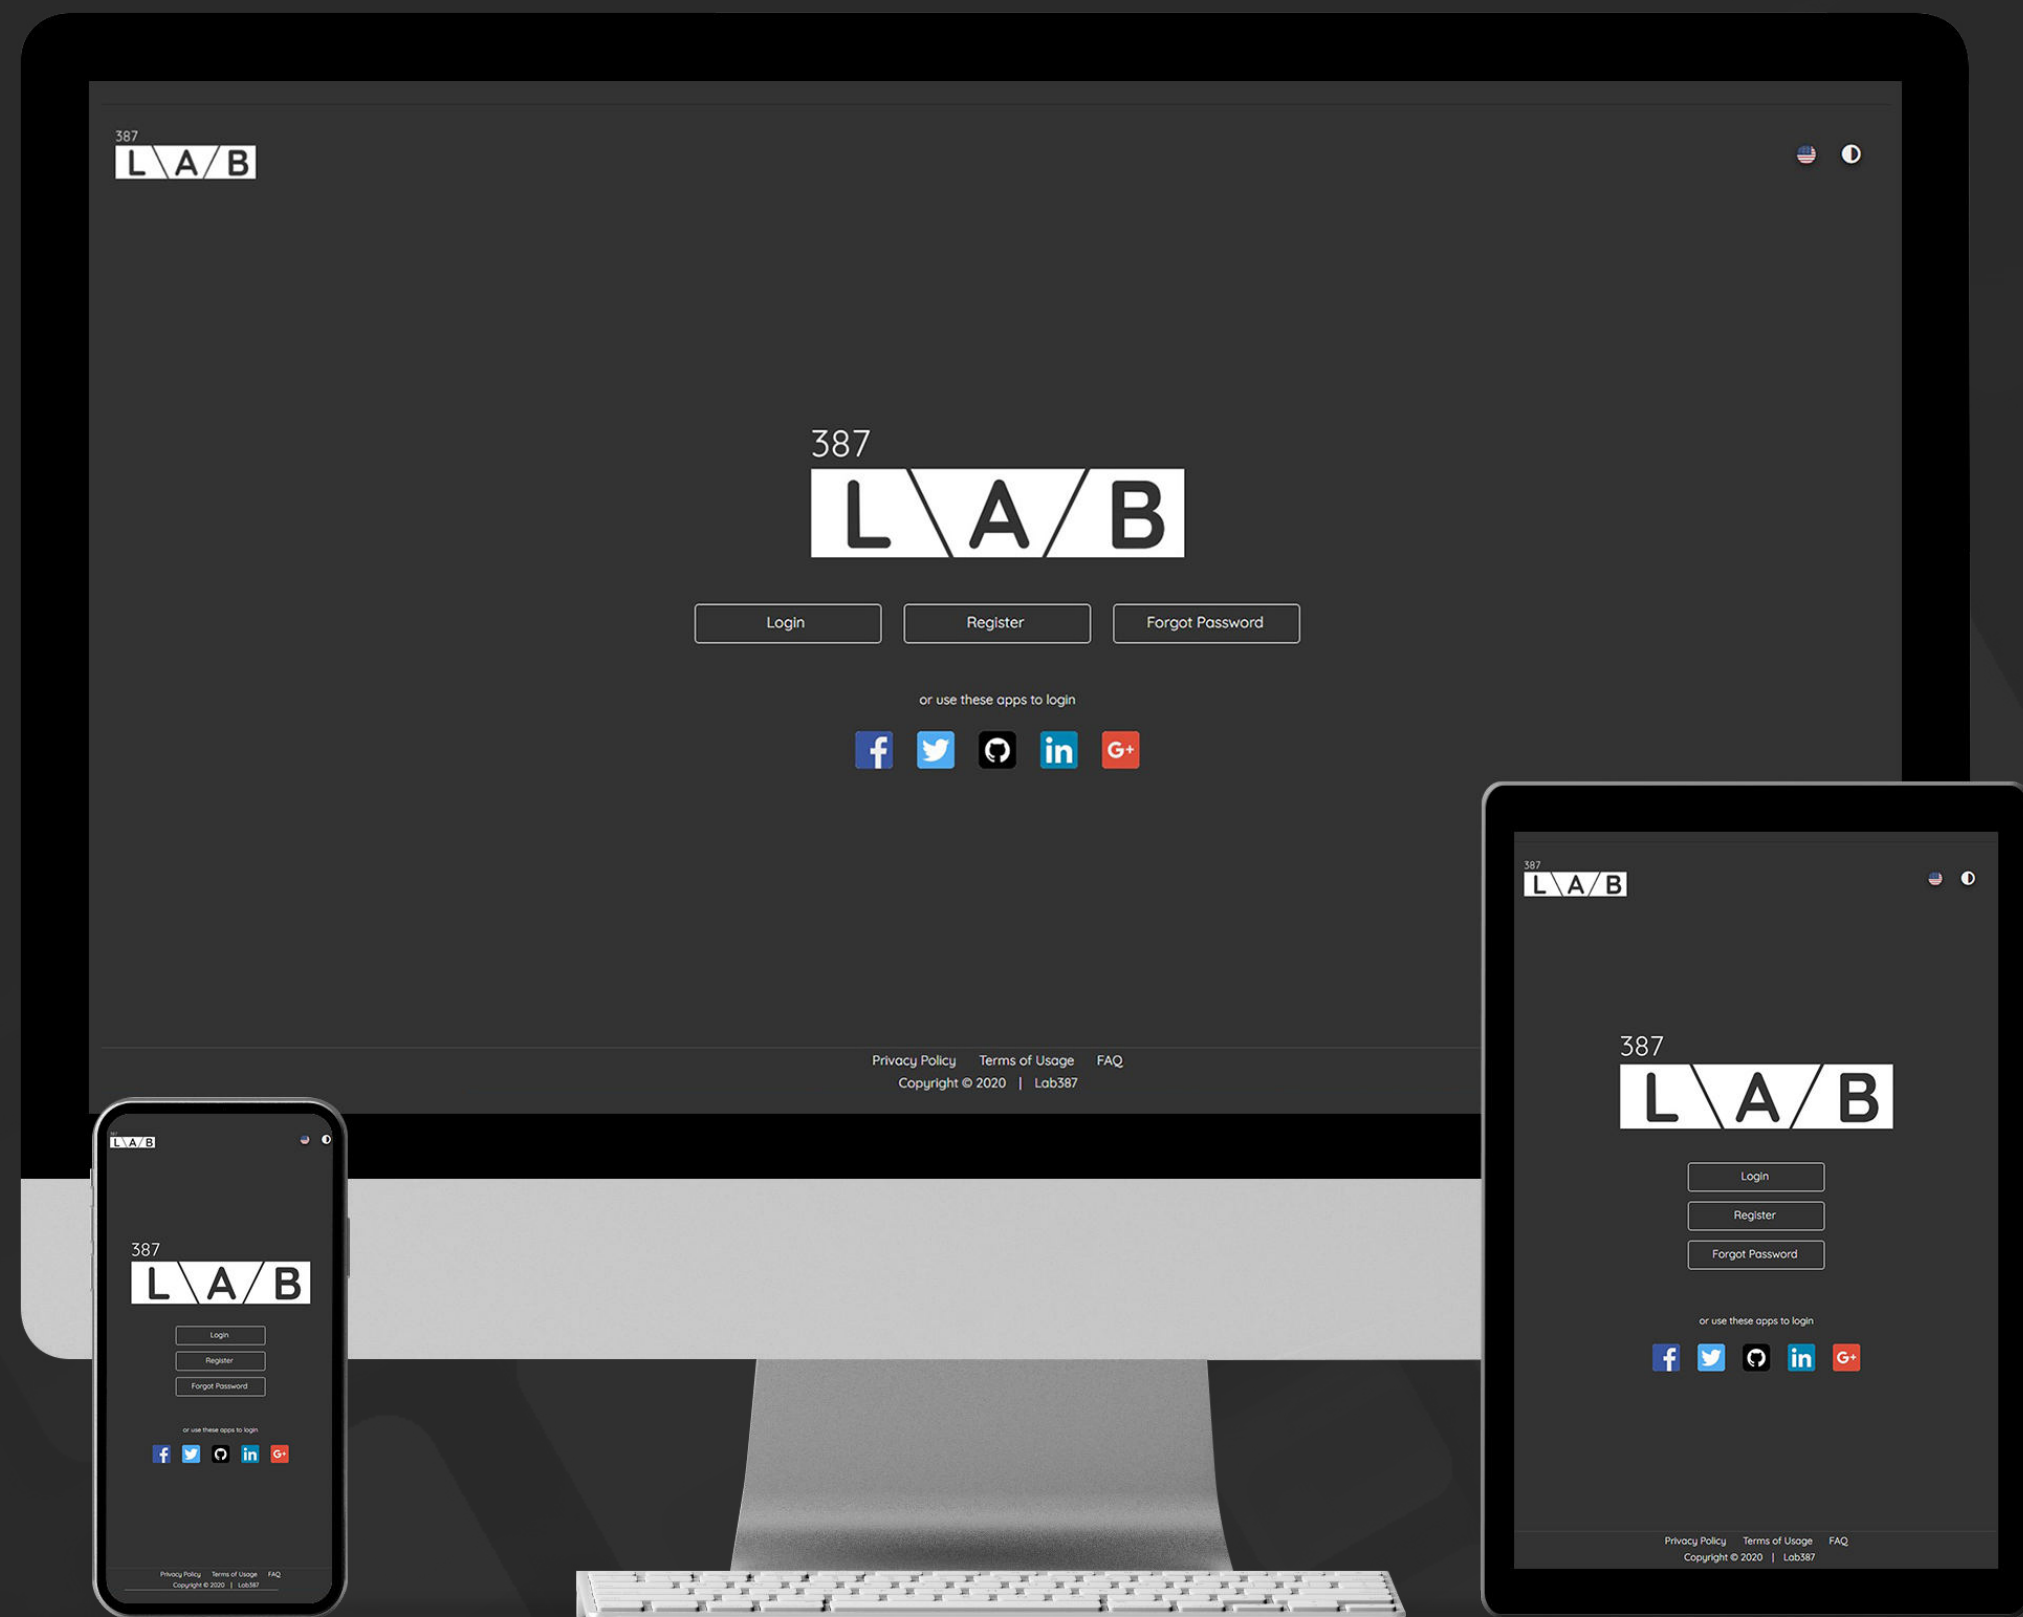

As part of [Lab387](#) apprentice, we created the [Admin aplikaciju](#) which is intended for all our free and paid applications created from scratch, for all web users.

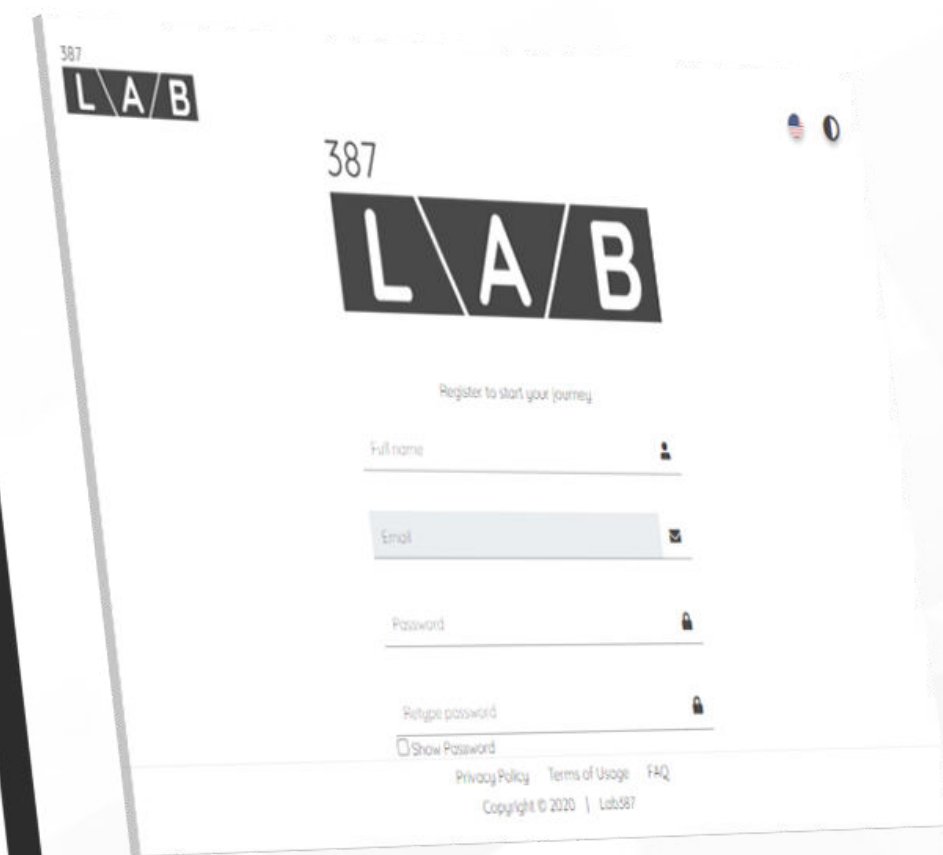

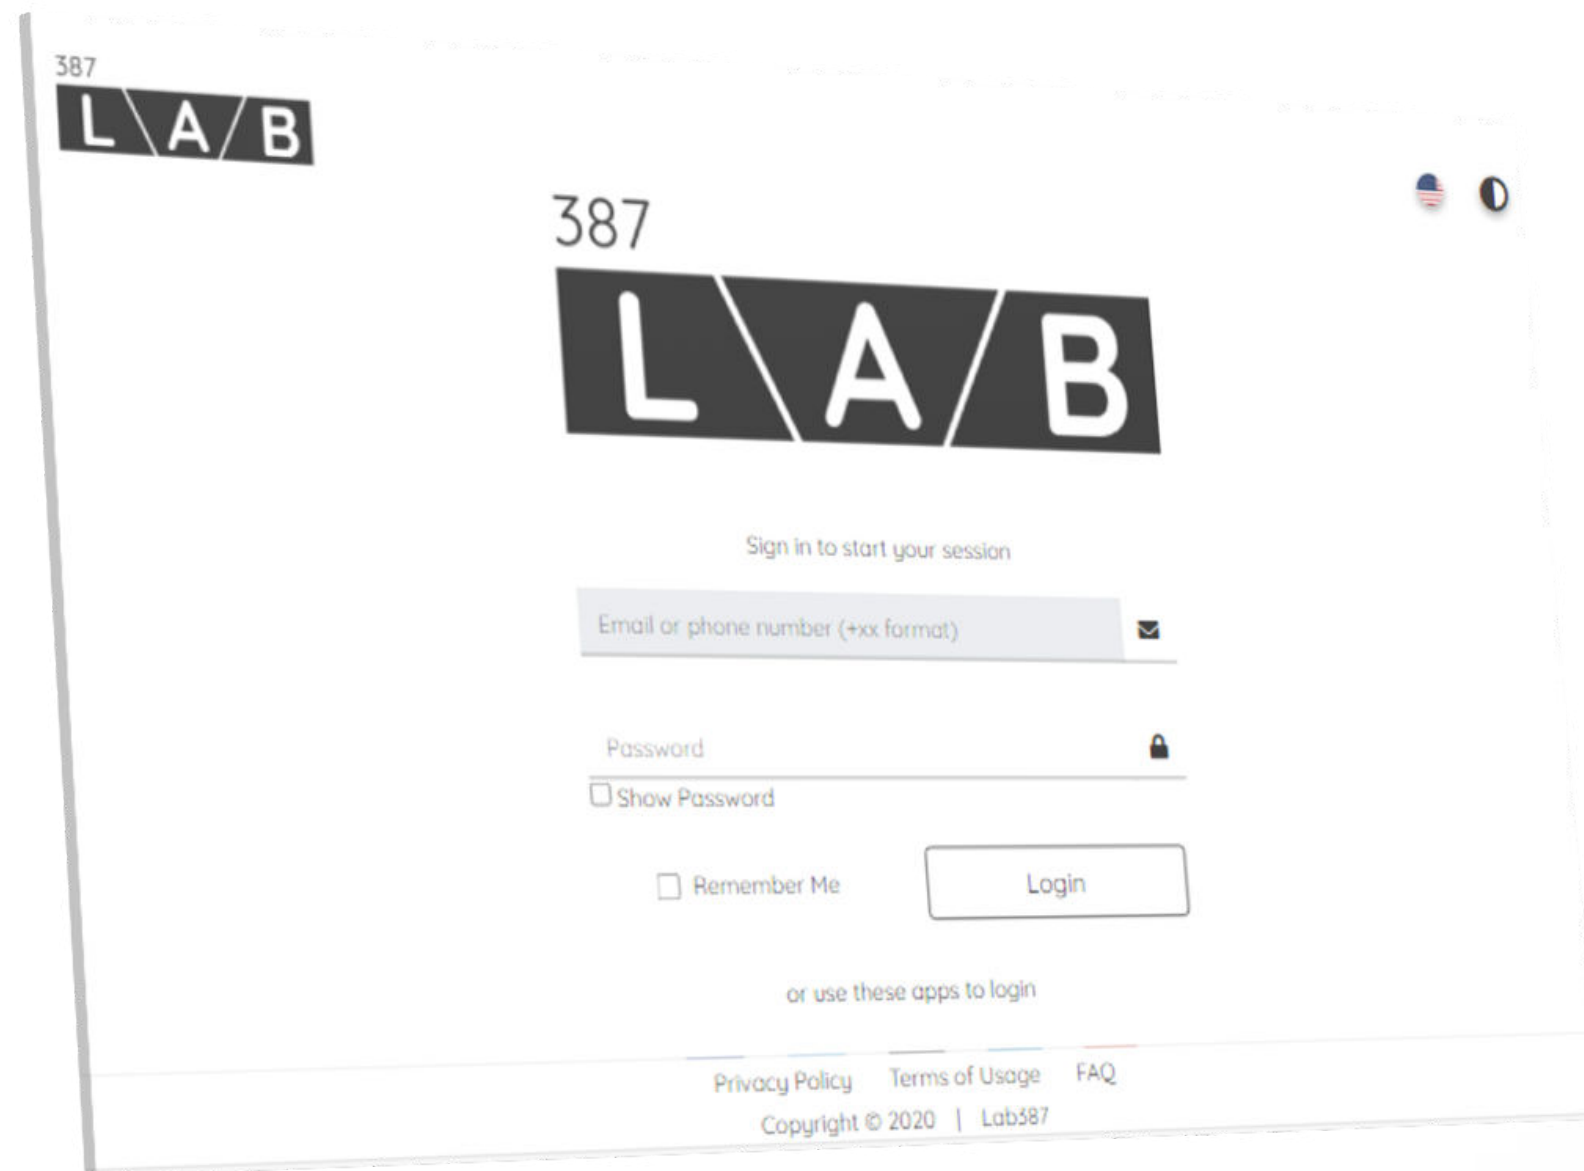

The admin application has registration and logging (via email or social networks), profile and subscription management, languages, light and dark versions, as well as the management of all users, applications and transactions.

We have also created options for merging new applications, creating multilingual packages for each of the applications as well as a GDPR module where all accepted Cookies Consent on all applications can be viewed and exported in one place.

The application is regularly developed and adapted to the needs of users and us.

admin.lab387.com

Shorty app

Shorty is the first **BH application** intended for working with short links, ie their management.

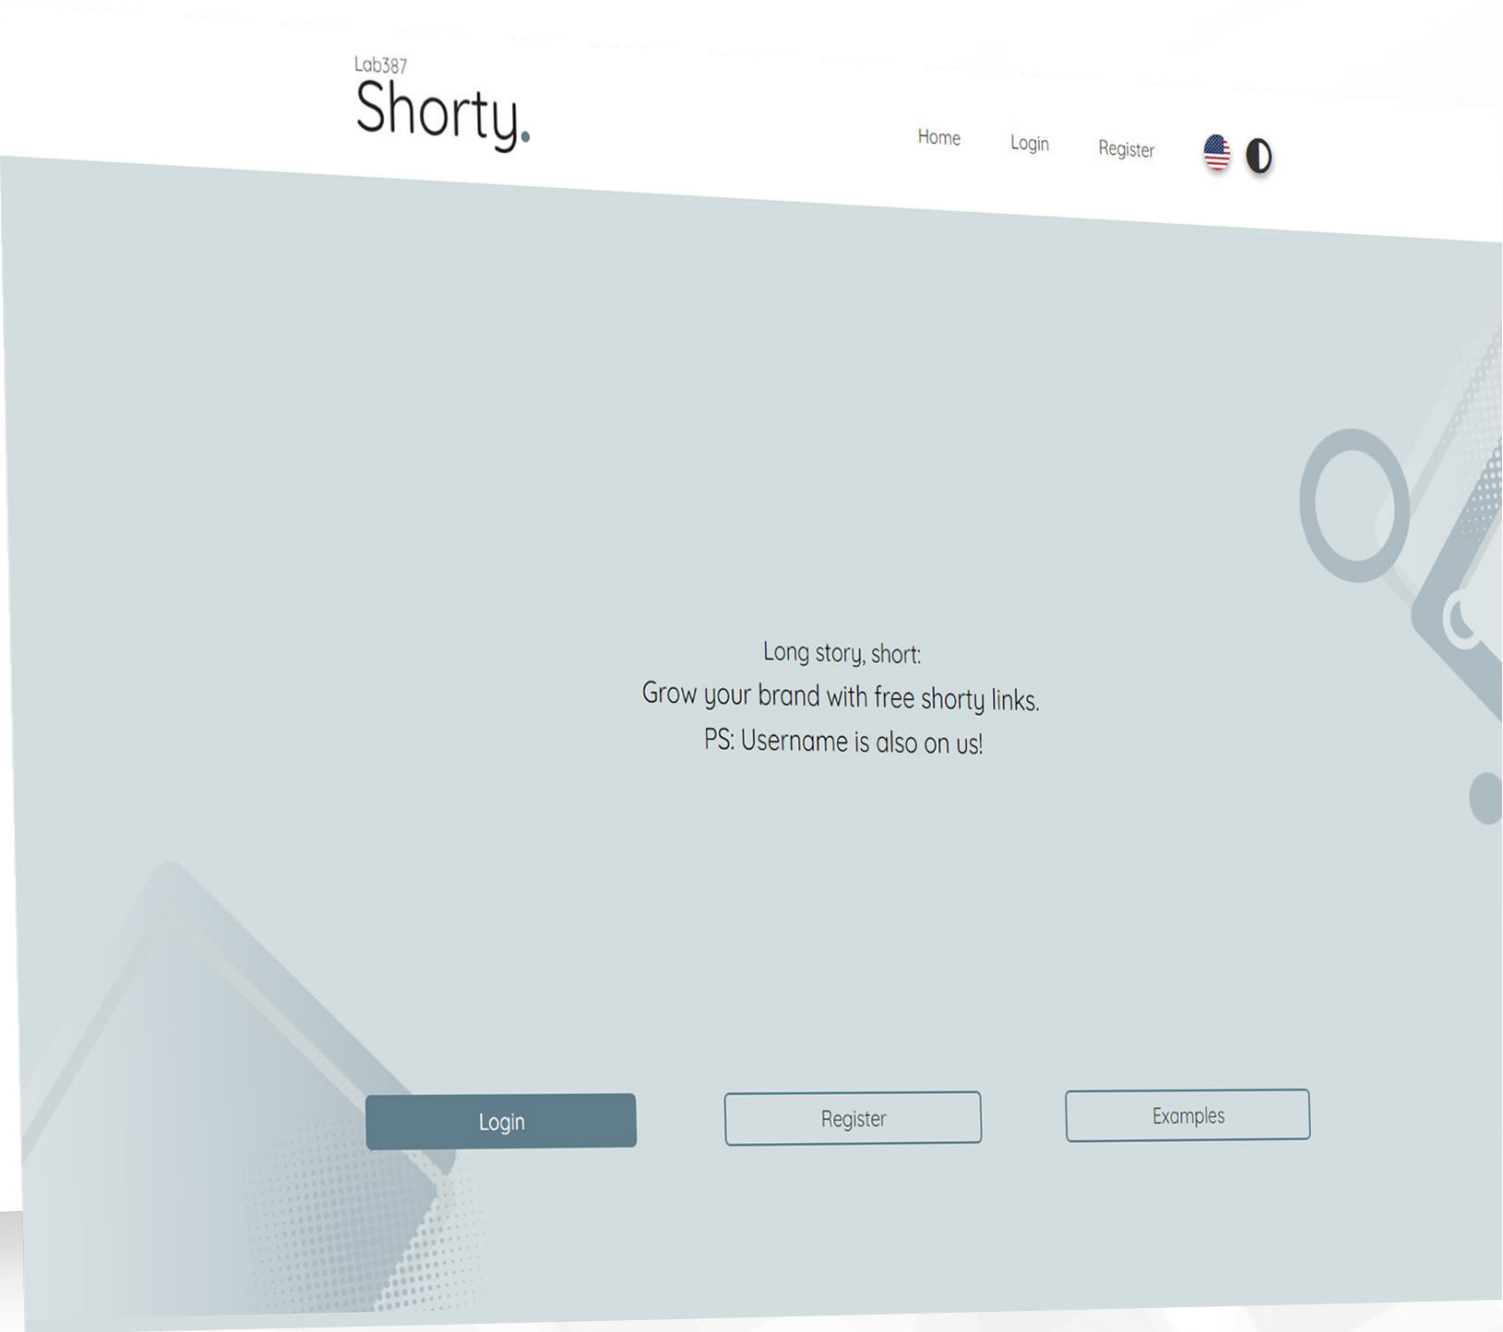

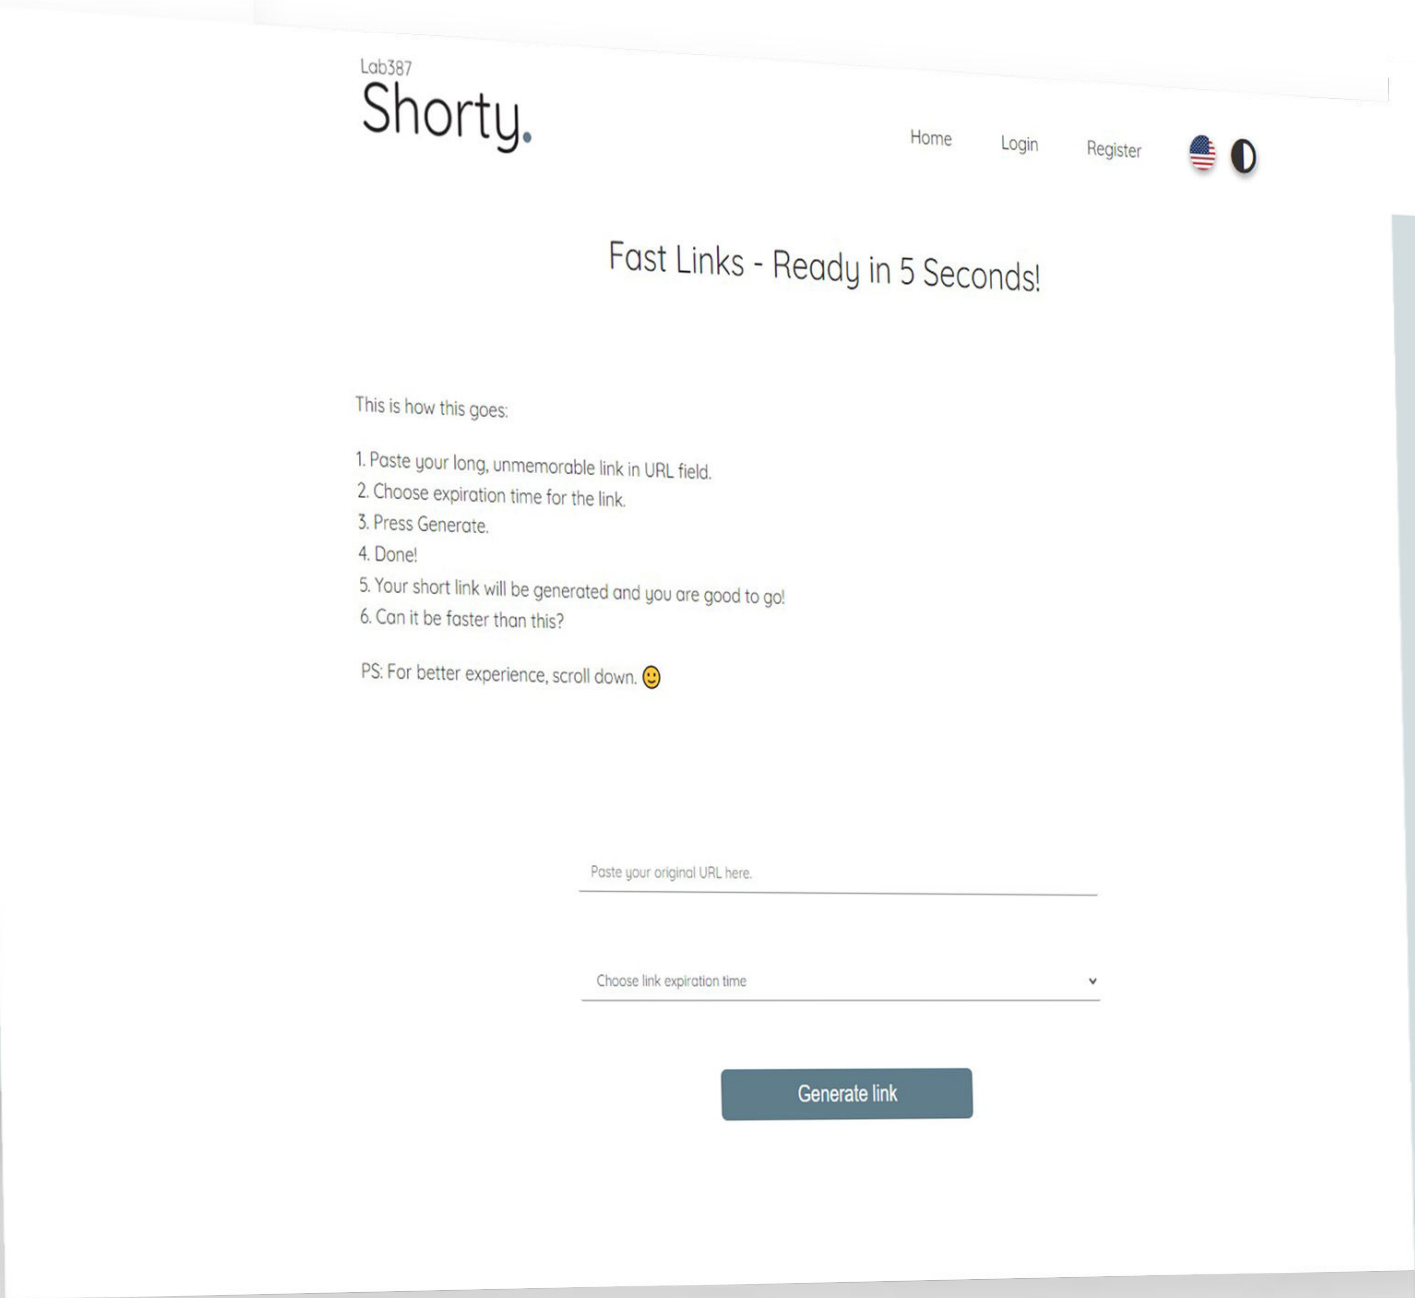

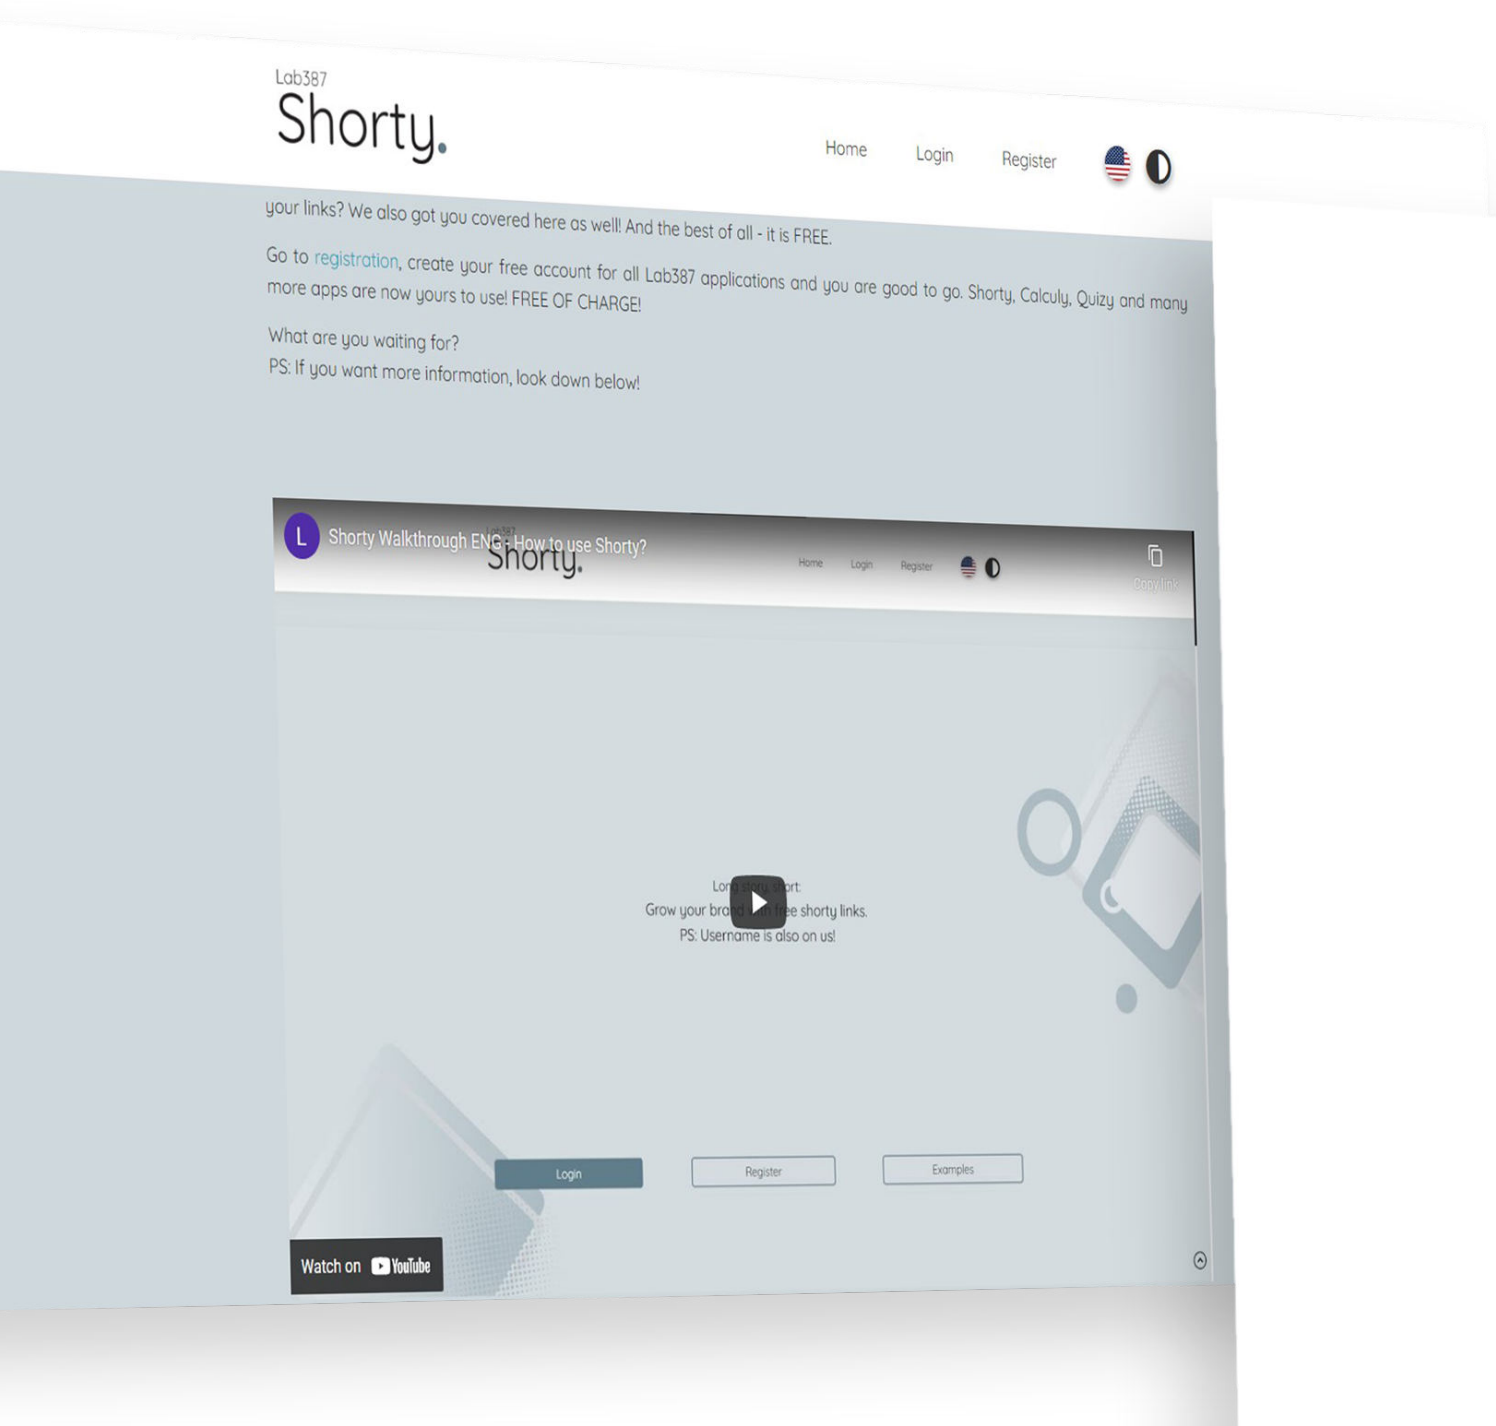

In addition to links that expire in the selected time period, registered users can create short links that do not expire, edit them and archive them.

Also, for each link we can see individual statistics and export them to a **PDF** document.

For future needs, we have left the possibility of adding new domains for administrators, so we can currently make short links on shorty.ba and 000.ba domains.

The application is connected to the Admin application so that complete registration and login to the application is done through it.

shorty.lab387.com

Quizzy app

Quizzy is the first **BH aplikaciju** designed to create promotional quizzes and collect leads for any industry.

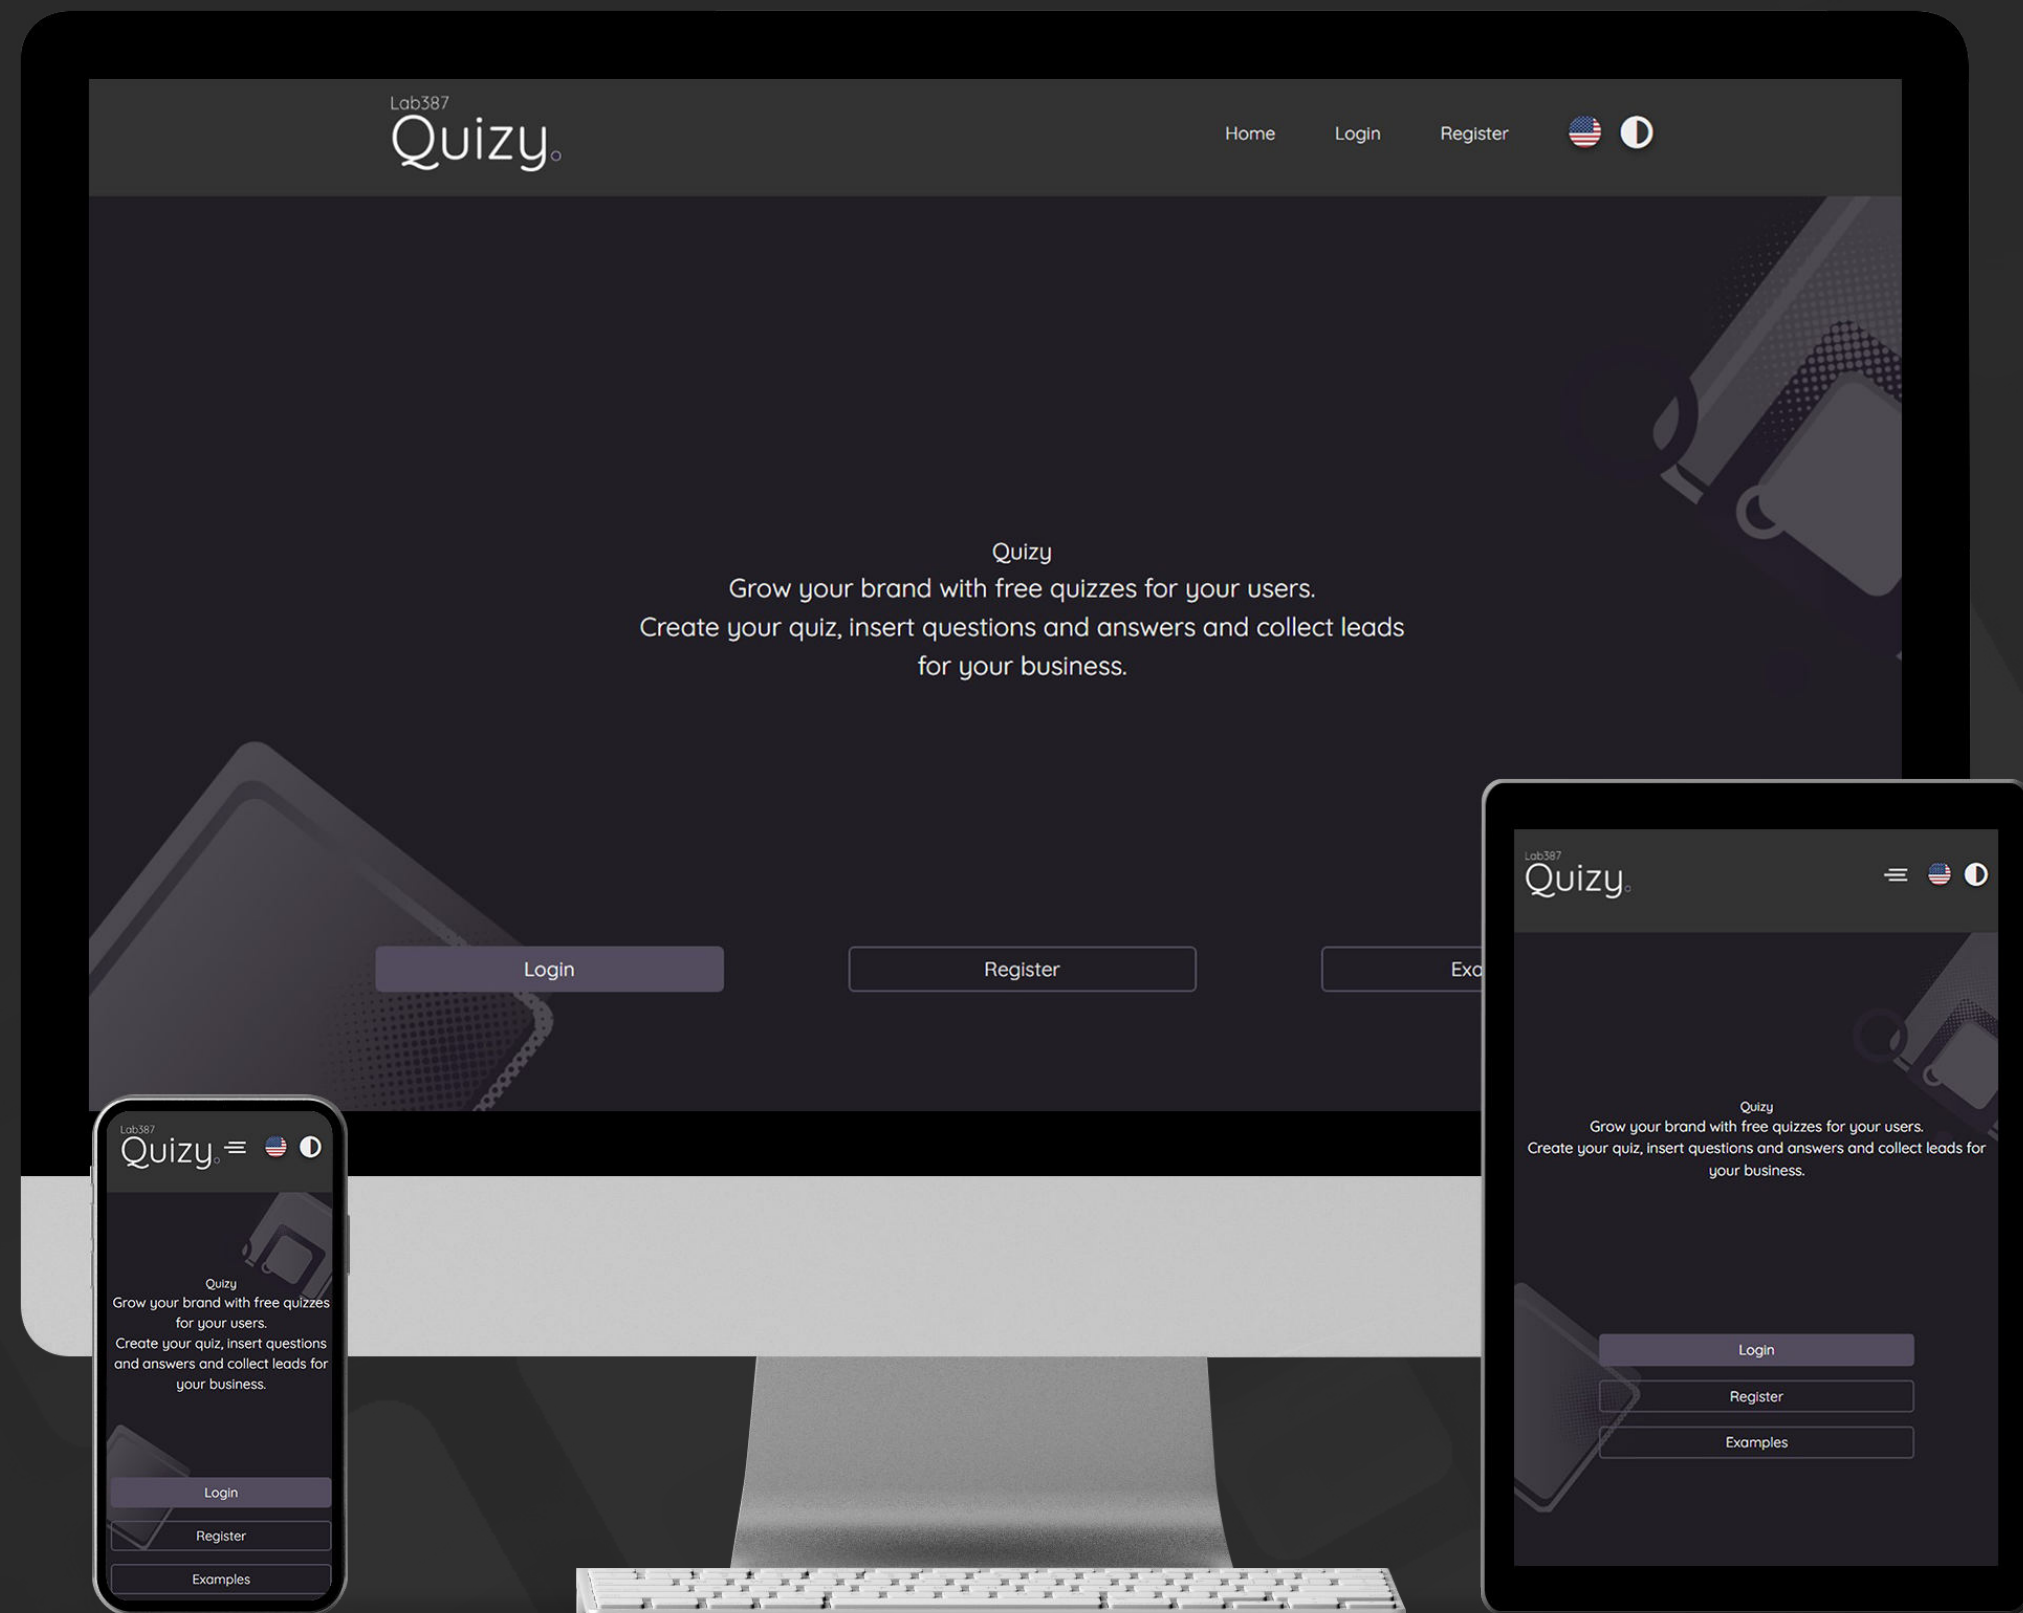

It allows you to create and edit an unlimited number of quizzes for each user, as well as an unlimited number of views on the web.

Each quiz can be completely edited, both with the content and with the design itself, and thus adapt it to the brand of the user / company.

For each quiz, complete statistics are created where users can see all the important information about the number of quiz openings, results as well as data collected within the quizzes where this is enabled.

The application is connected to the Admin application so that complete registration and login to the application is done through it.

quizzy.lab387.com

How much does Quizzy cost?

What features are available inside Quizzy?

For now, you can create a new quiz with customized options and design without any limit, where you can choose colors, content, upload your logo, and more. Also, you can edit created quiz and its every option, archive the quiz calculator, if you don't need it anymore or restore the quiz from archive. You can set the quiz as an example for others, embed the quiz on any other website with custom styles for every quiz you create. You can connect to the external databases (for storing user data), or to Google Analytics, Facebook Pixel, Mailchimp, SendinBlue or MailerLite. Also, you can export your data in CSV or JSON format.

What are Questions and Answers inside the Quizzy?

How can I edit already created quiz?

How can I archive or restore the quiz?

How can I change style for the quiz?

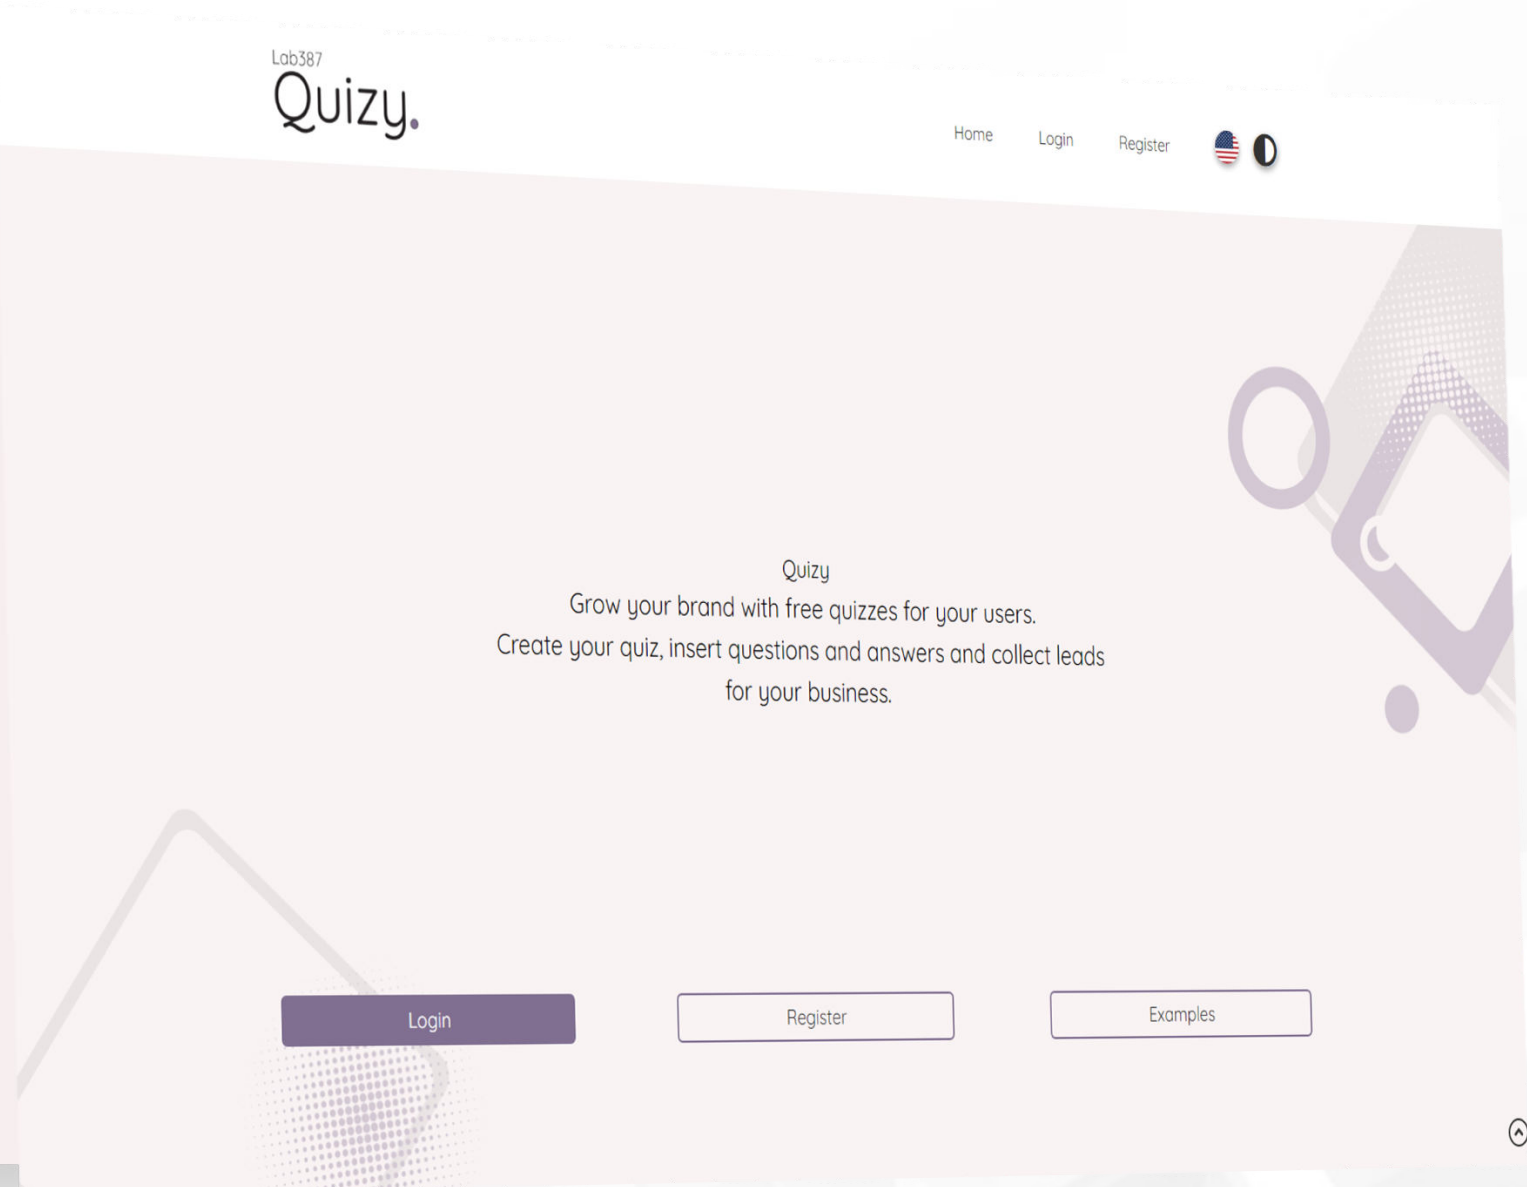

How can I add my quiz into Examples page?

Inside the Quizzy, you can use following features:

1. Create a new quiz with customized options and design.
2. Choose colors, content, upload your logo (fully customizable).
3. Edit created quiz and its every option.
4. Archive the created quiz, if you don't need it anymore.
5. Restore the quiz from archive to active quizzes.
6. Set the quiz as an example for others.
7. Easy iframe code for embedding the quiz on any other website.
8. Create one or more style for every quiz (with custom fonts and colors).
9. Go through insights for every quiz (with user data, if you need that).
10. Connection to the external databases (for storing user data).
11. Possibility to connect Quizzy with Google Analytics and Facebook Pixel.
12. Possibility to connect Quizzy with Mailchimp, SendinBlue and MailerLite.
13. Possibility to export your data in CSV or JSON format.

Also, you can use Quizzy in light or dark mode - your preference! If you need more informations, please see our [FAQ](#), if not, go and [register](#)!

Grow your brand with free quizzes for your users.
Create your quiz, insert questions and answers and collect leads
for your business.

Login Register Examples

Calculy app

Calculy predstavlja prvu **BH application** designed to create calculators for various purposes.

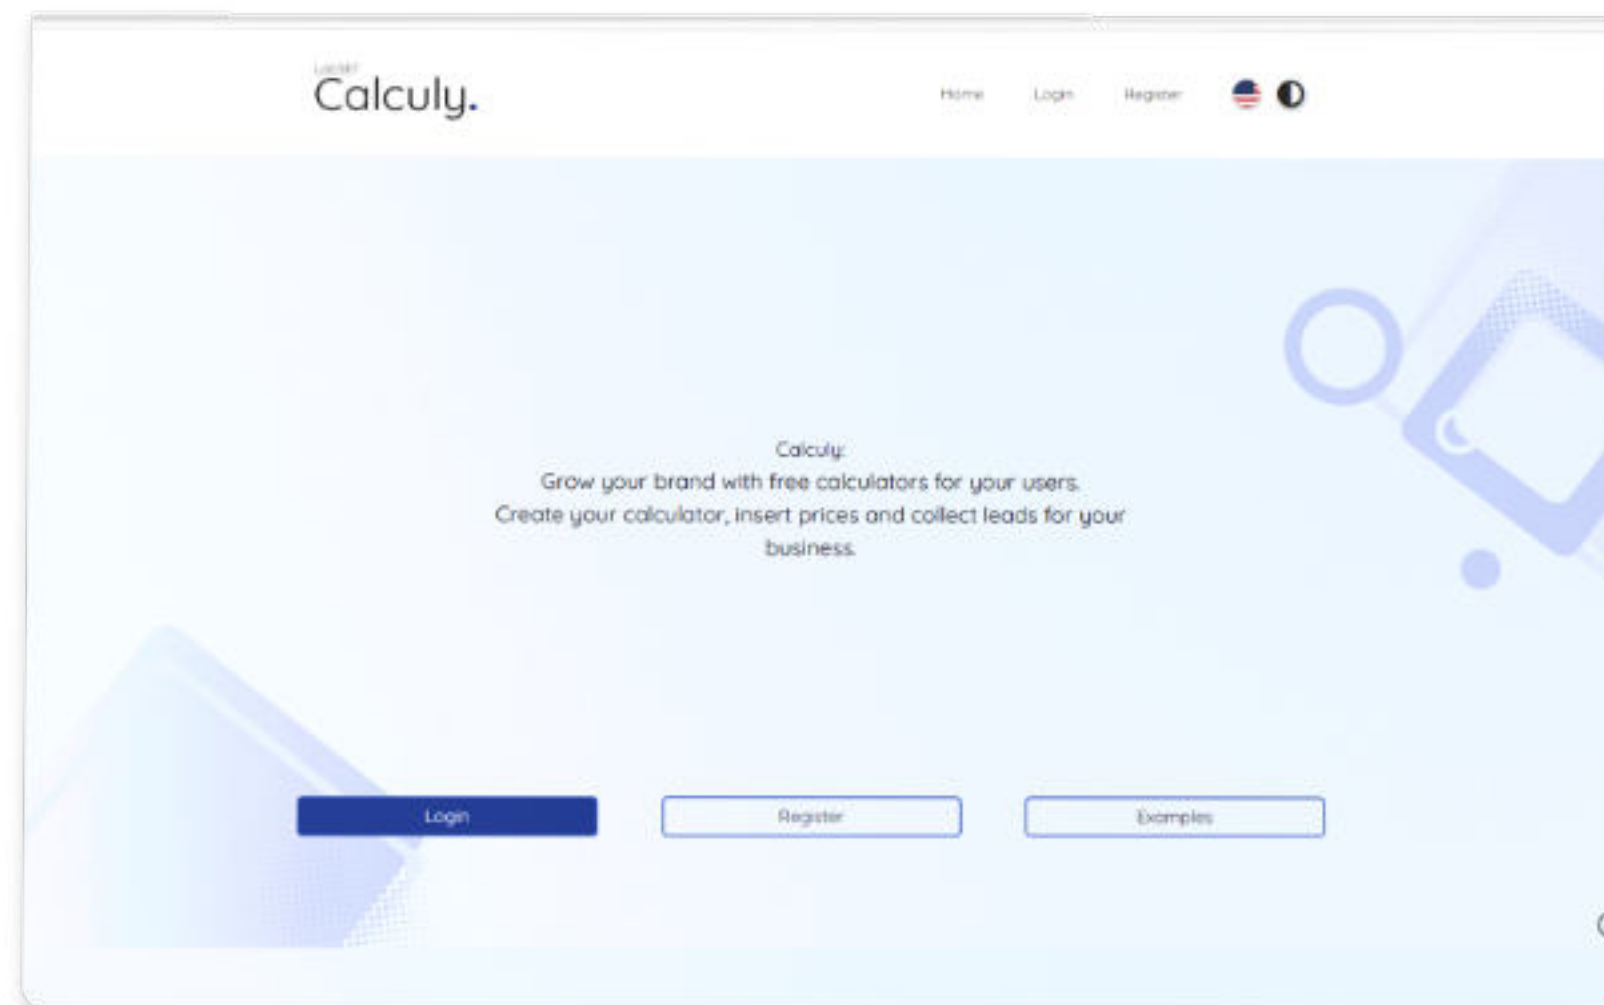

One of the most important roles is to create a calculator to create an automatic, dynamic offer for potential customers by answering questions.

It is possible to create and edit an unlimited number of calculators for each user, as well as an unlimited number of views on the web. Each calculator can be completely edited, both with the content and with the design itself, and thus adapt it to the brand of the user / company.

Each calculator has complete usage statistics, as well as data collected from potential customers for further use.

The application is connected to the Admin application so that complete registration and login to the application is done through it.

calculy.lab387.com

Arte Casa app

For our clients, we have created a dynamic and modern application that allows **3D** viewing and design selection for tempered glass.

The user is able to change the color of the kitchen, turn on - turn off the **LED** light on it, and from the selected categories to find and display the design he likes.

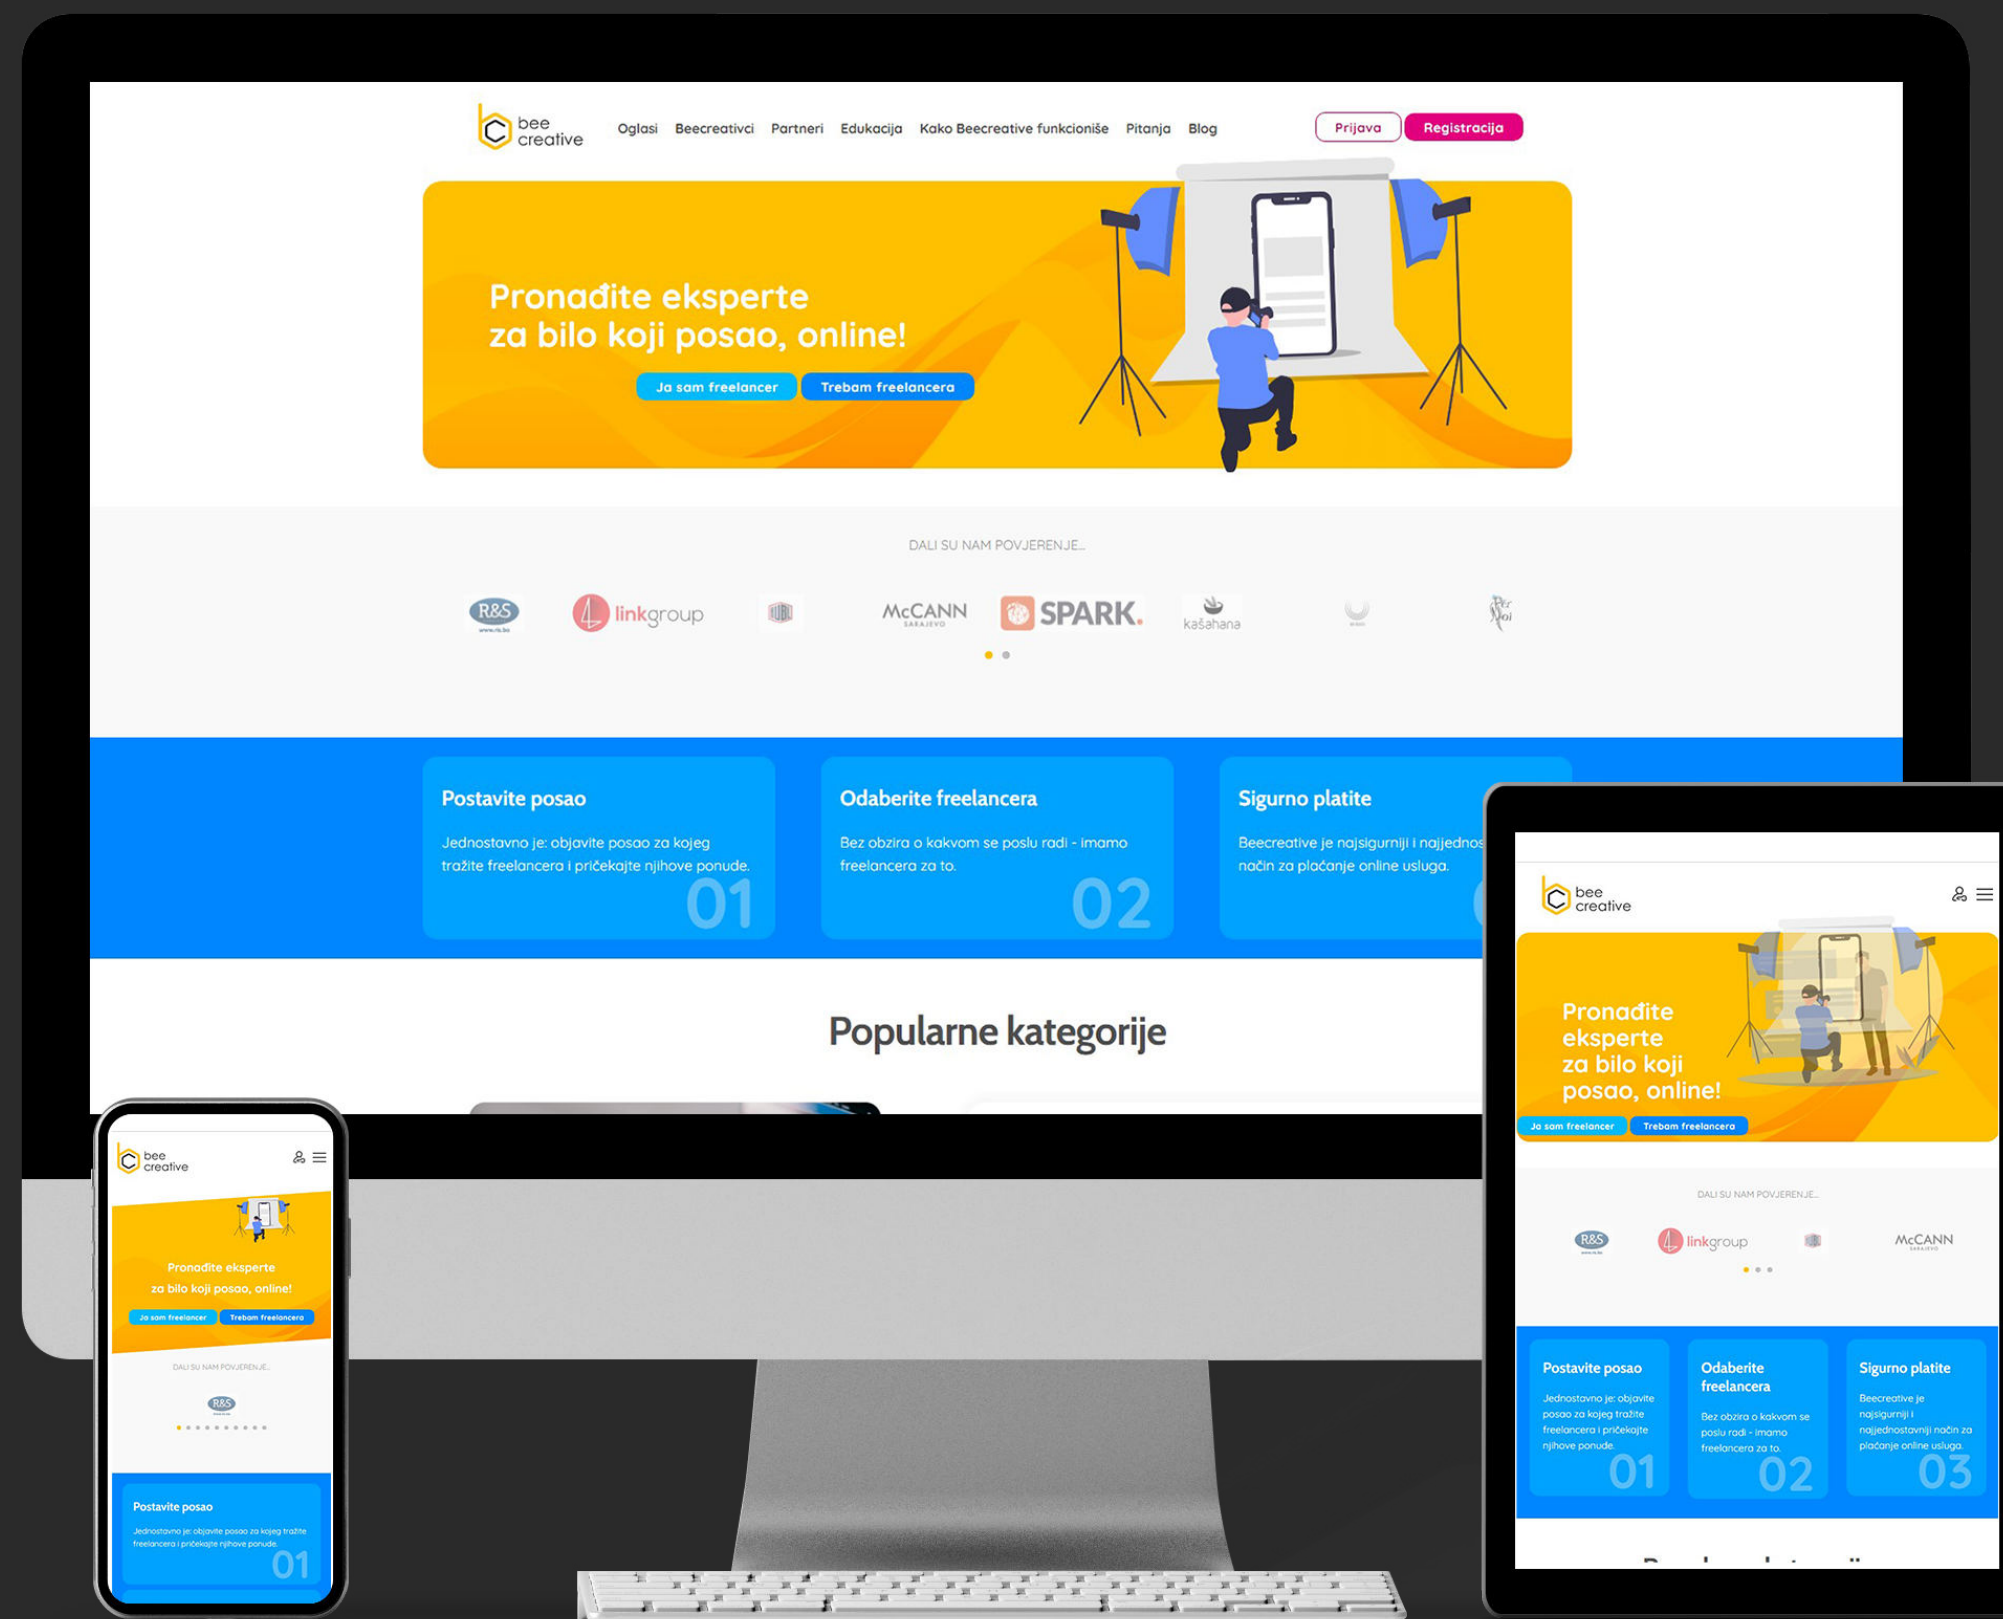

Once the design is selected, the user can send an initial message with the selected design and data to schedule an initial meeting and arrange collaboration.

Each segment of the application contains a part with an explanation of how that part of the application is used, which facilitates the user's initial work in the application.

artecasa.co

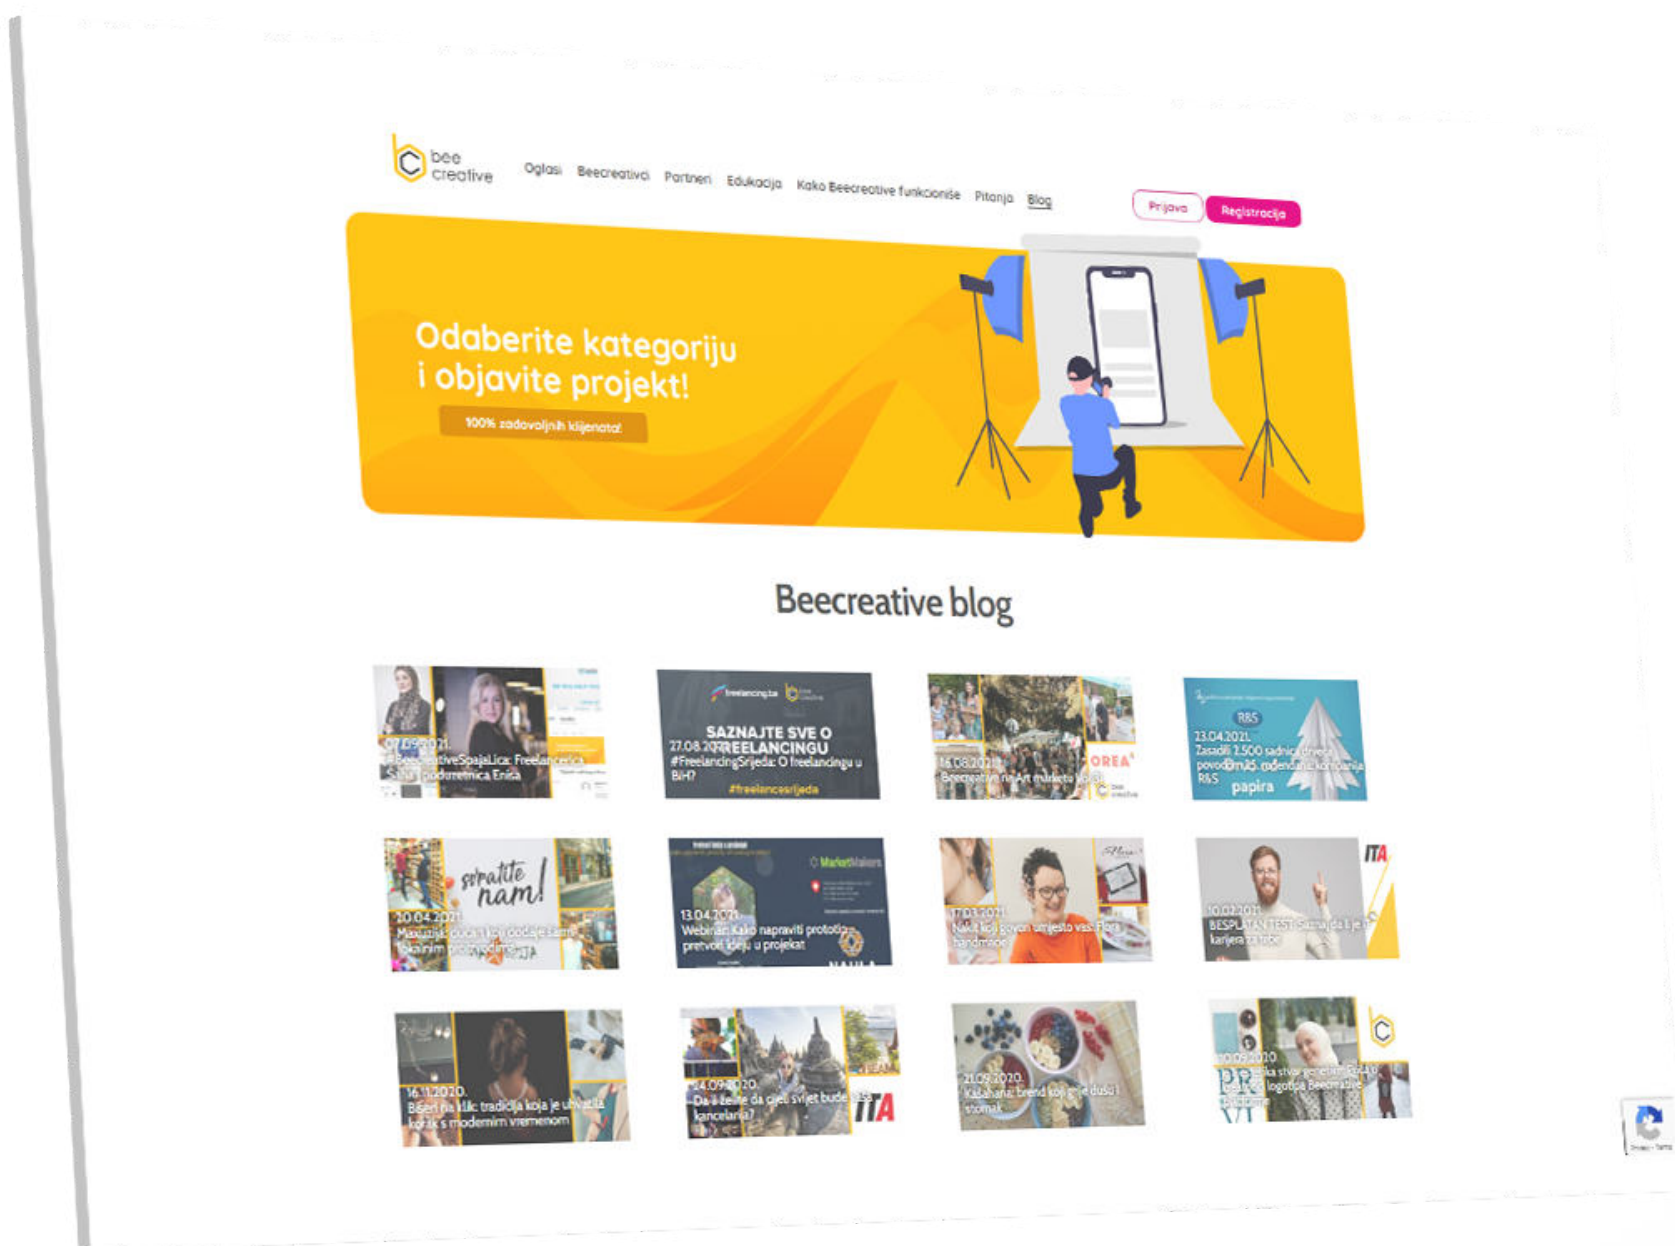

Bee Creative

For our clients, we took the half-finished **WordPress** web application, and continued its editing and development.

We worked on editing the front page, custom category search, registration, user profiles along with custom portfolio, communication between users via messages, job postings and other parts of this web application.

After finishing the editing, the application was returned to the main domain and hosting and then configured and launched in the new version.

beecreative.ba

MySchool

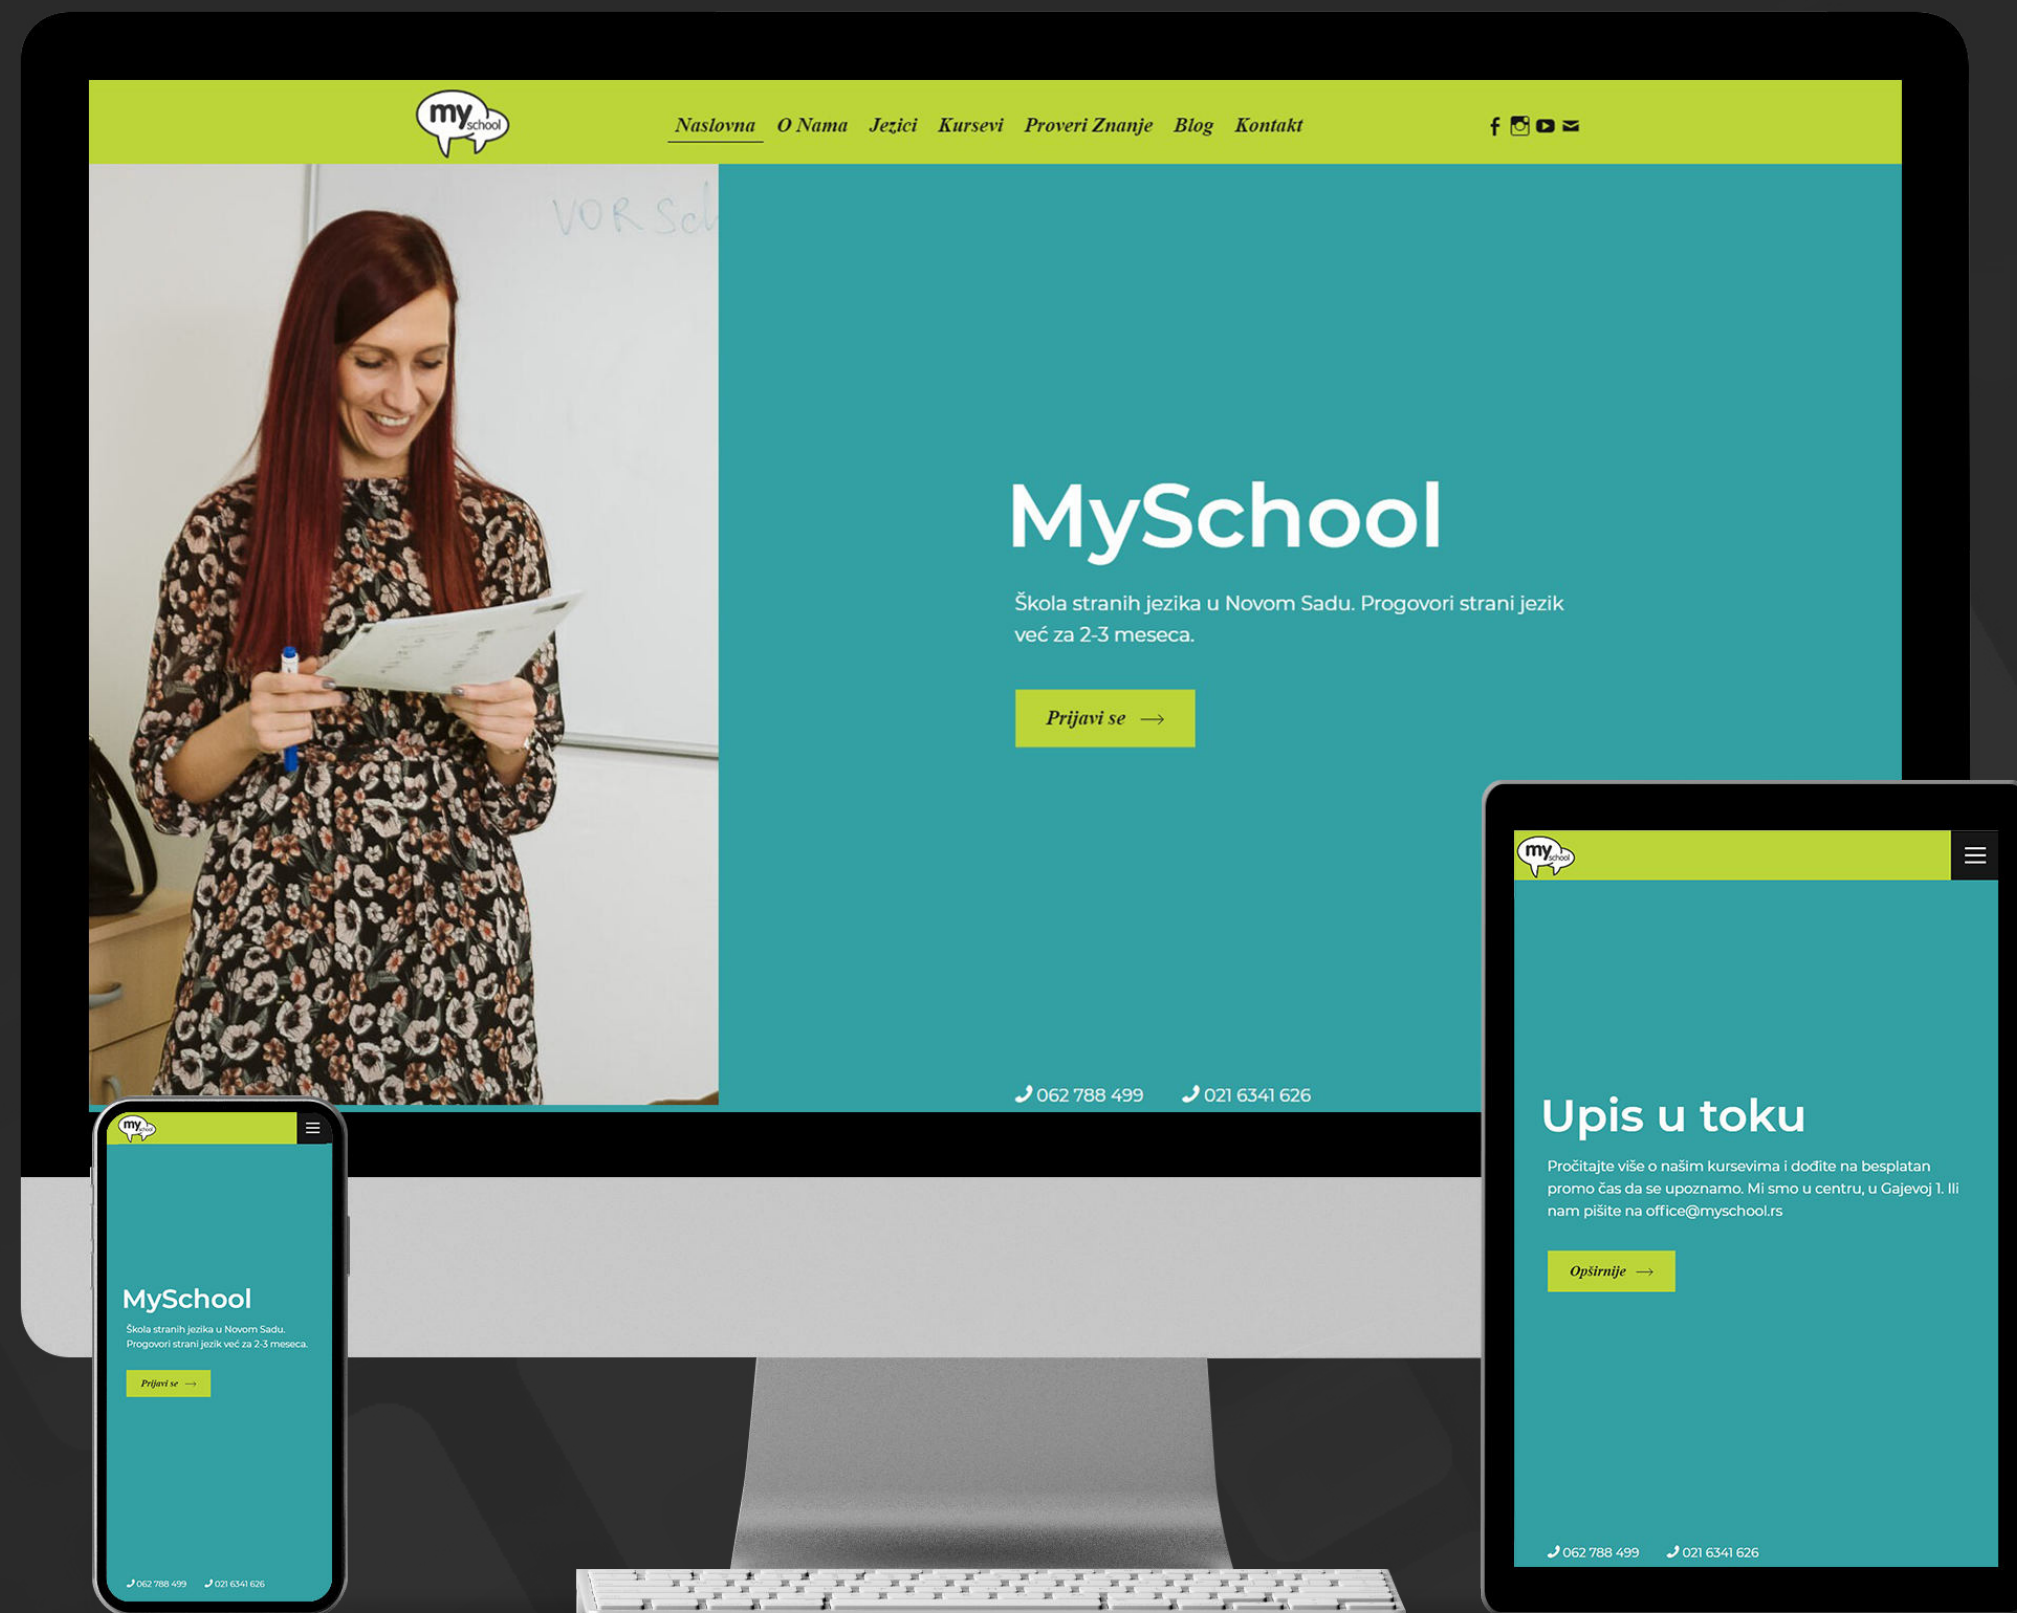

For our clients, MySchool Novi Sad, we have edited and completely redesigned this **WordPress** application.

Within the application, it is possible to manage all major foreign language courses as well as their sub-courses.

We have also created functionalities to create tests to assess knowledge and gather potential leads through them, with automated notifications via email.

Also, within the application there is the possibility of creating, editing and displaying the lecturers themselves, the impressions of the participants as well as blog posts related to the courses themselves.

myschool.rs

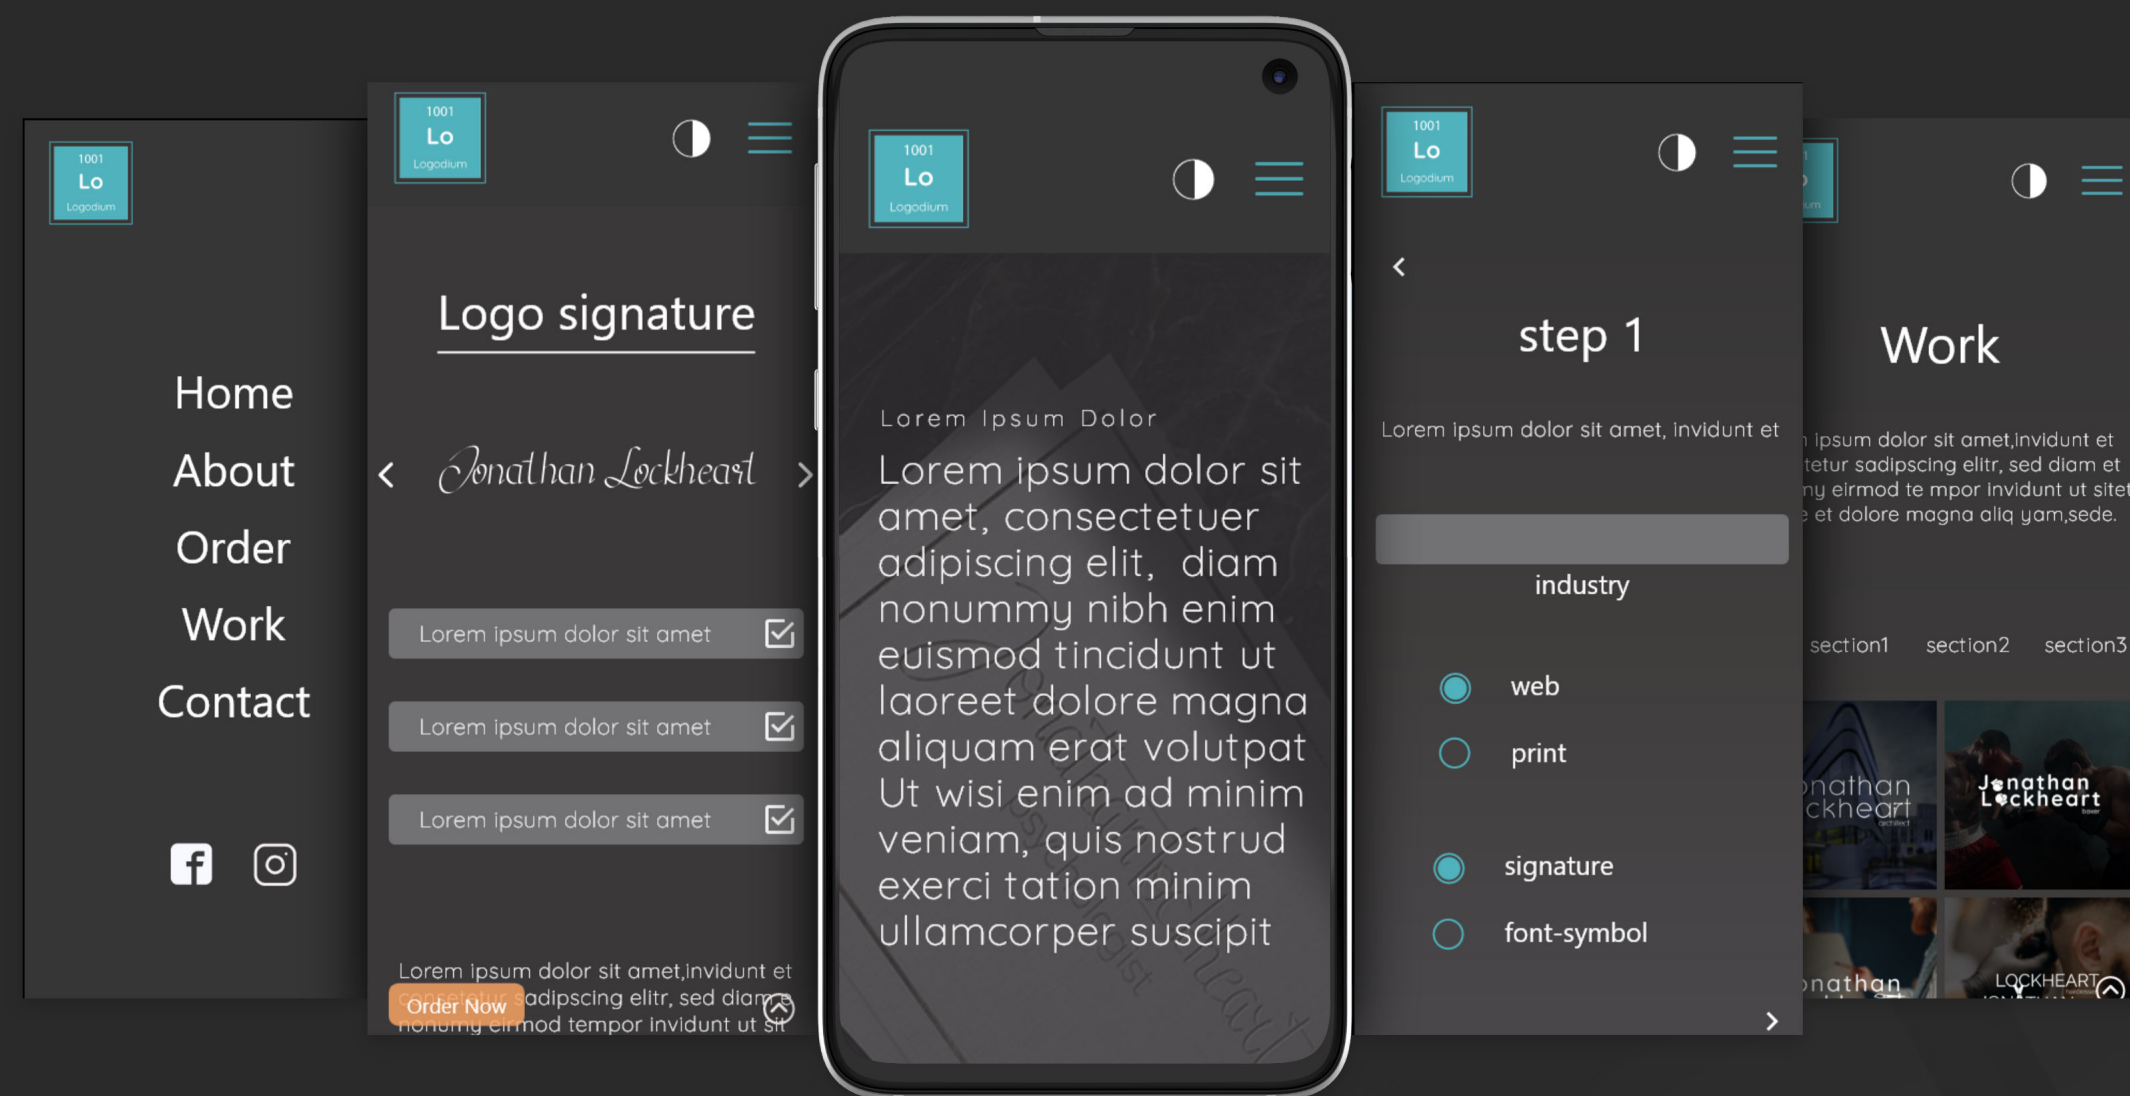

UX/UI Design

In this section, take a look at some of our best and most interesting graphics for websites and applications - our UX / UI design.

For each of them, we did different kinds of research, adapted the initial ideas to the market, designed the product, and then final editing looking at the broader / global image of the brand and the complete website / application with its specific goal.

Logodium UX/UI

Logodium is one of the specific websites dedicated to the presentation and sale of personal logos. Logodium itself is also an introduction to a slightly larger product that we call a personal brand.

For this reason, after researching the competition and the market itself, the complete design is tailored to a younger, modern audience (because the time of personal brands is yet to come).

UX / UI was made within the Adobe XD tool, so we made it easier to create a website later (we have visible interactions, dynamics).

AdminLab UX/UI

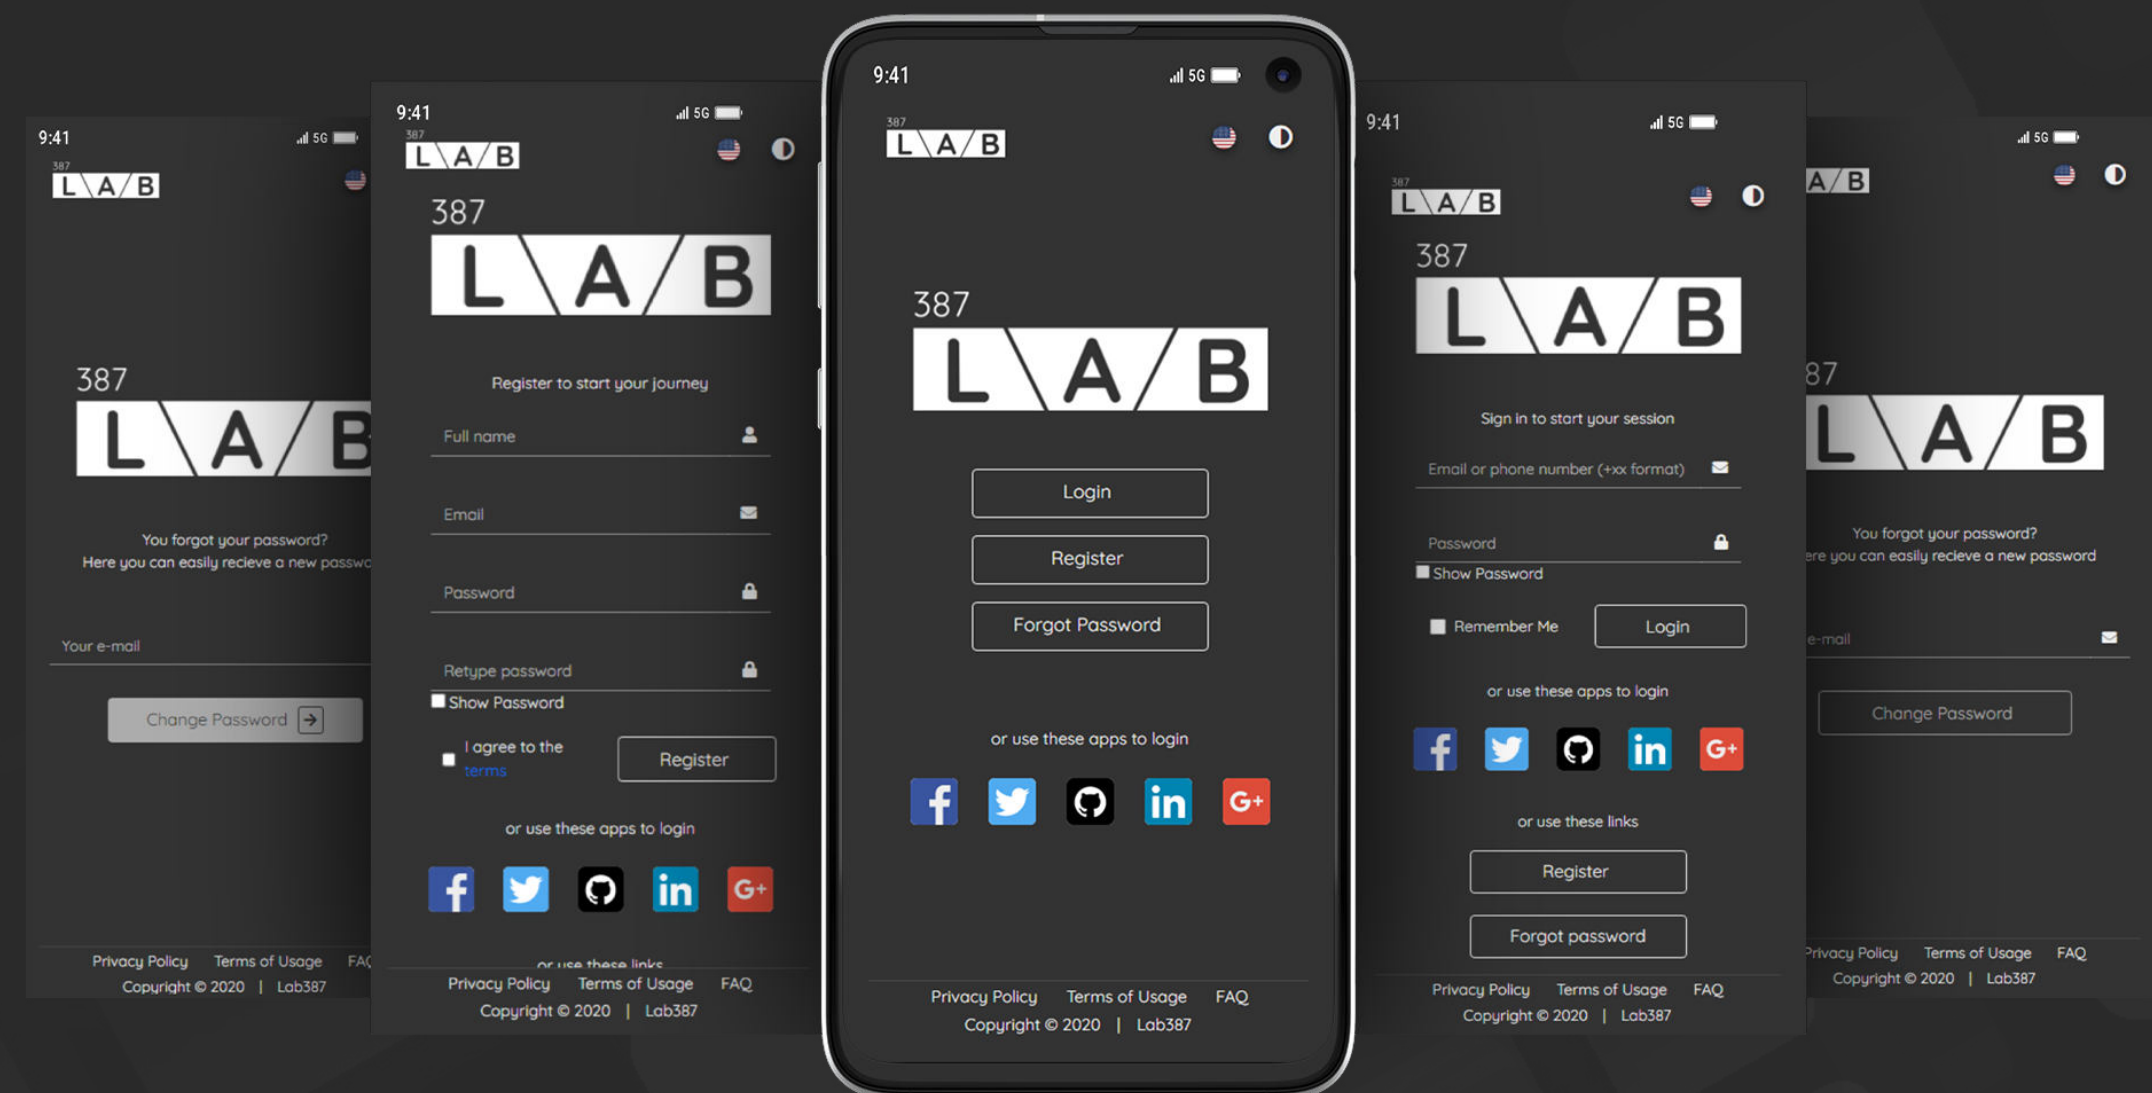

The Admin application is one of the modern, unusual applications that connects and includes different types of applications and functionalities within itself (more about it within the Web Development section).

For this reason, the design and user experience of this application had to be quite simple, easy to manage and without any additional content.

So Admin, which has a black and white version, has no additional colors (except in the fields for confirmation or rejection of the command), everything is arranged in very simple rectangles (which still look modern), and immediately upon entering the application we are greeted by applications connected to this application as a user would not have to look for them.

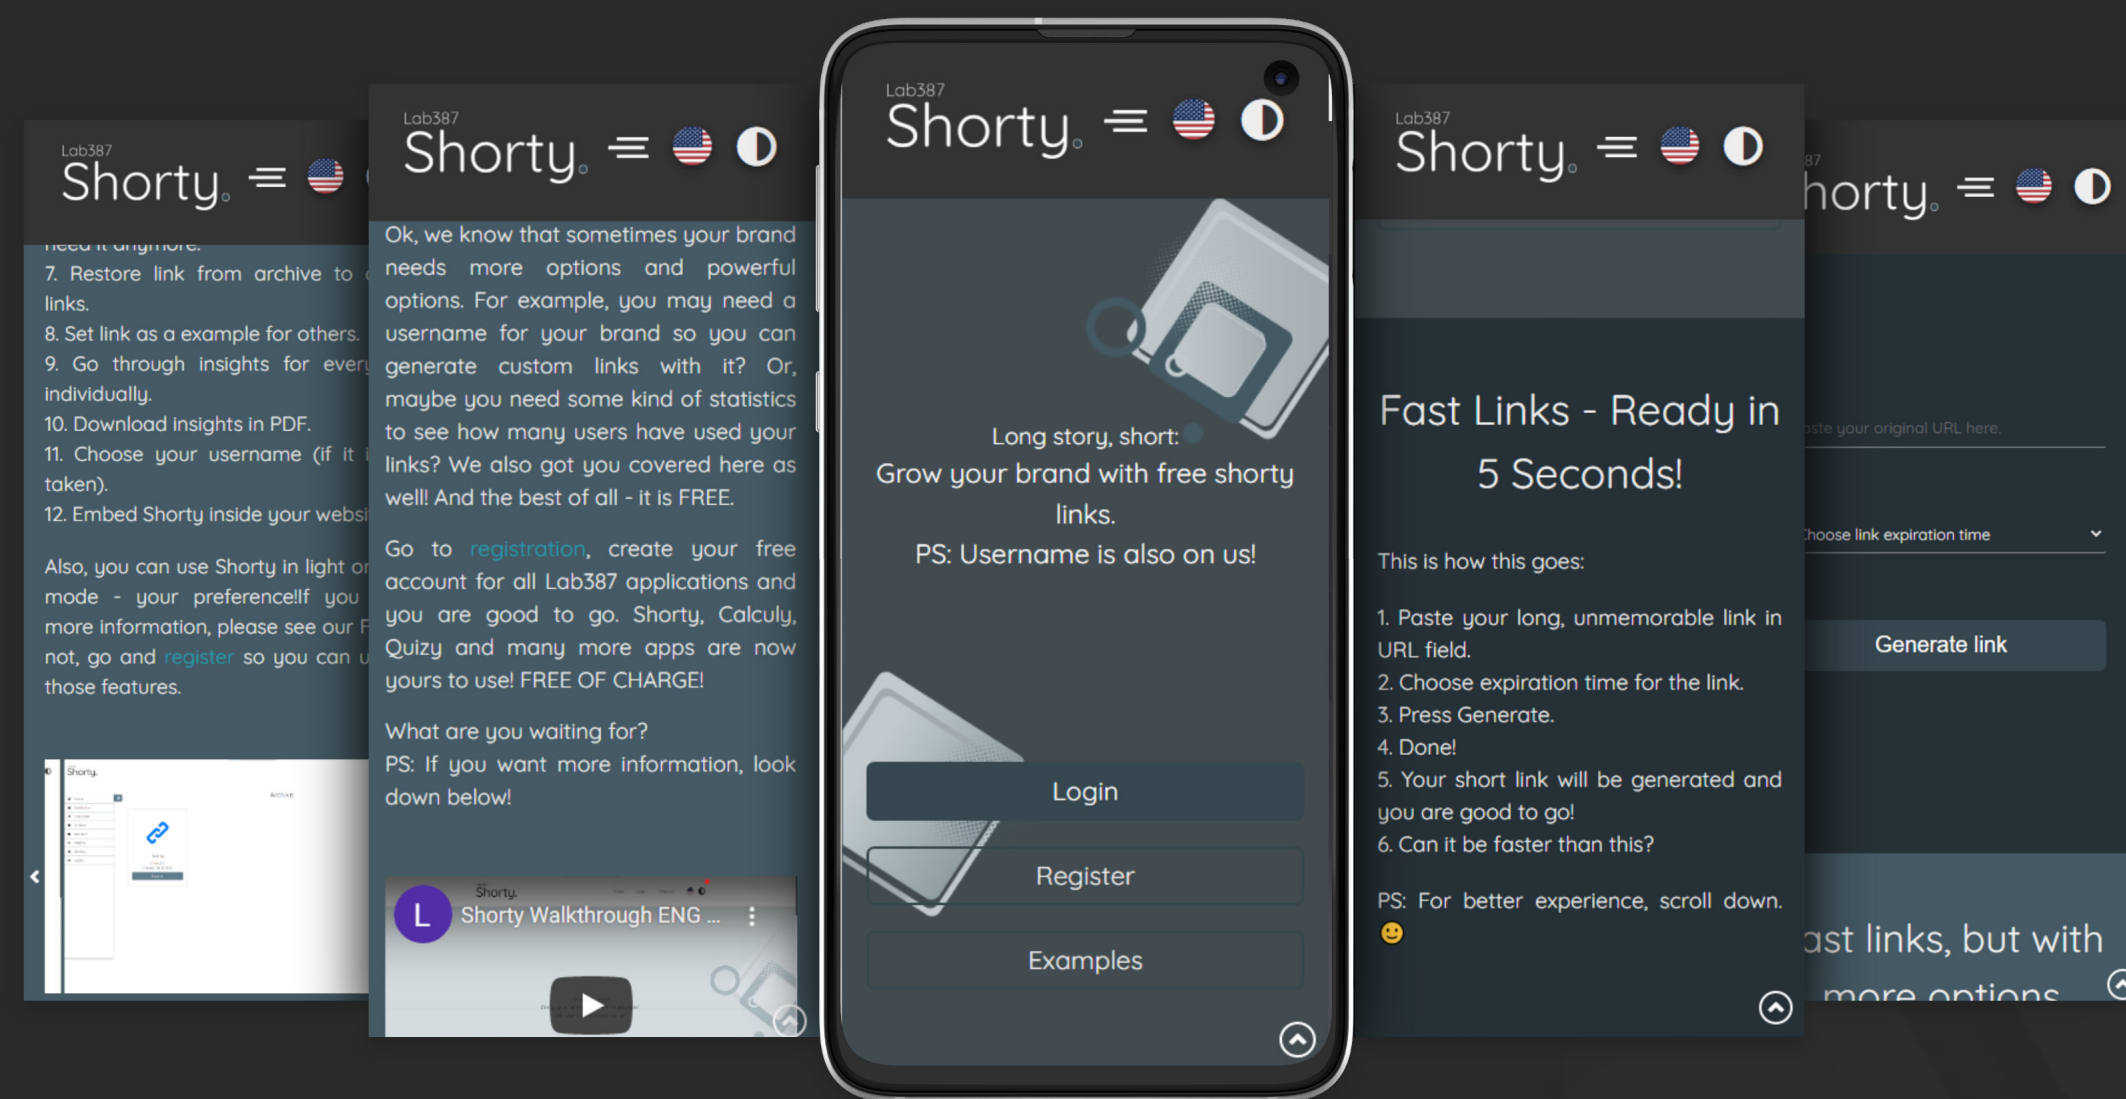

Although it contains robust functionalities for both users and administrators, they are all very simple and easy to access from the main sidebar.

UX / UI is done within Adobe XD tool.

Shorty UX/UI

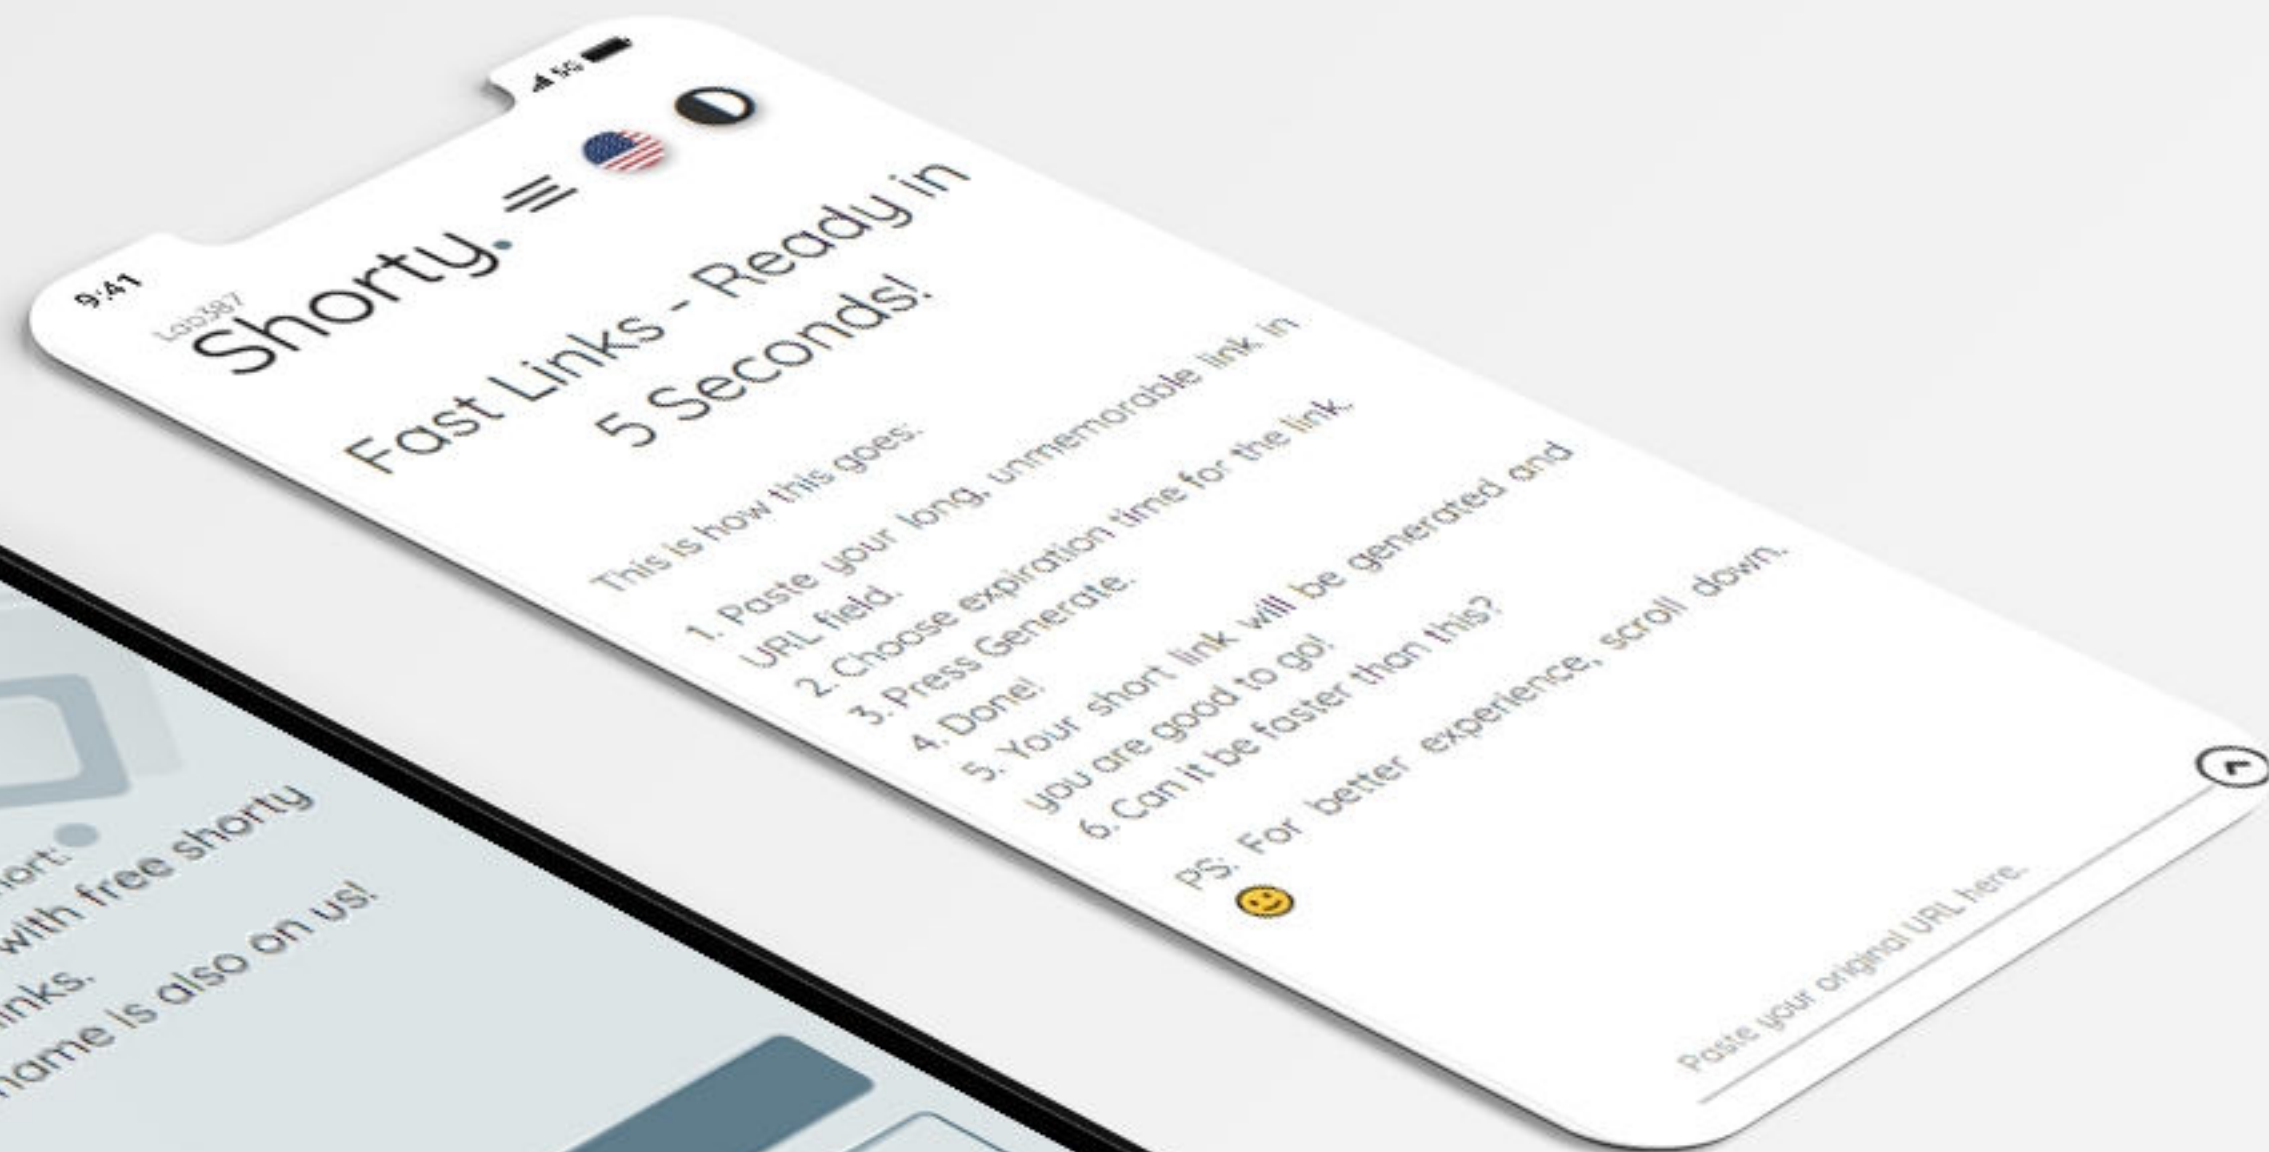

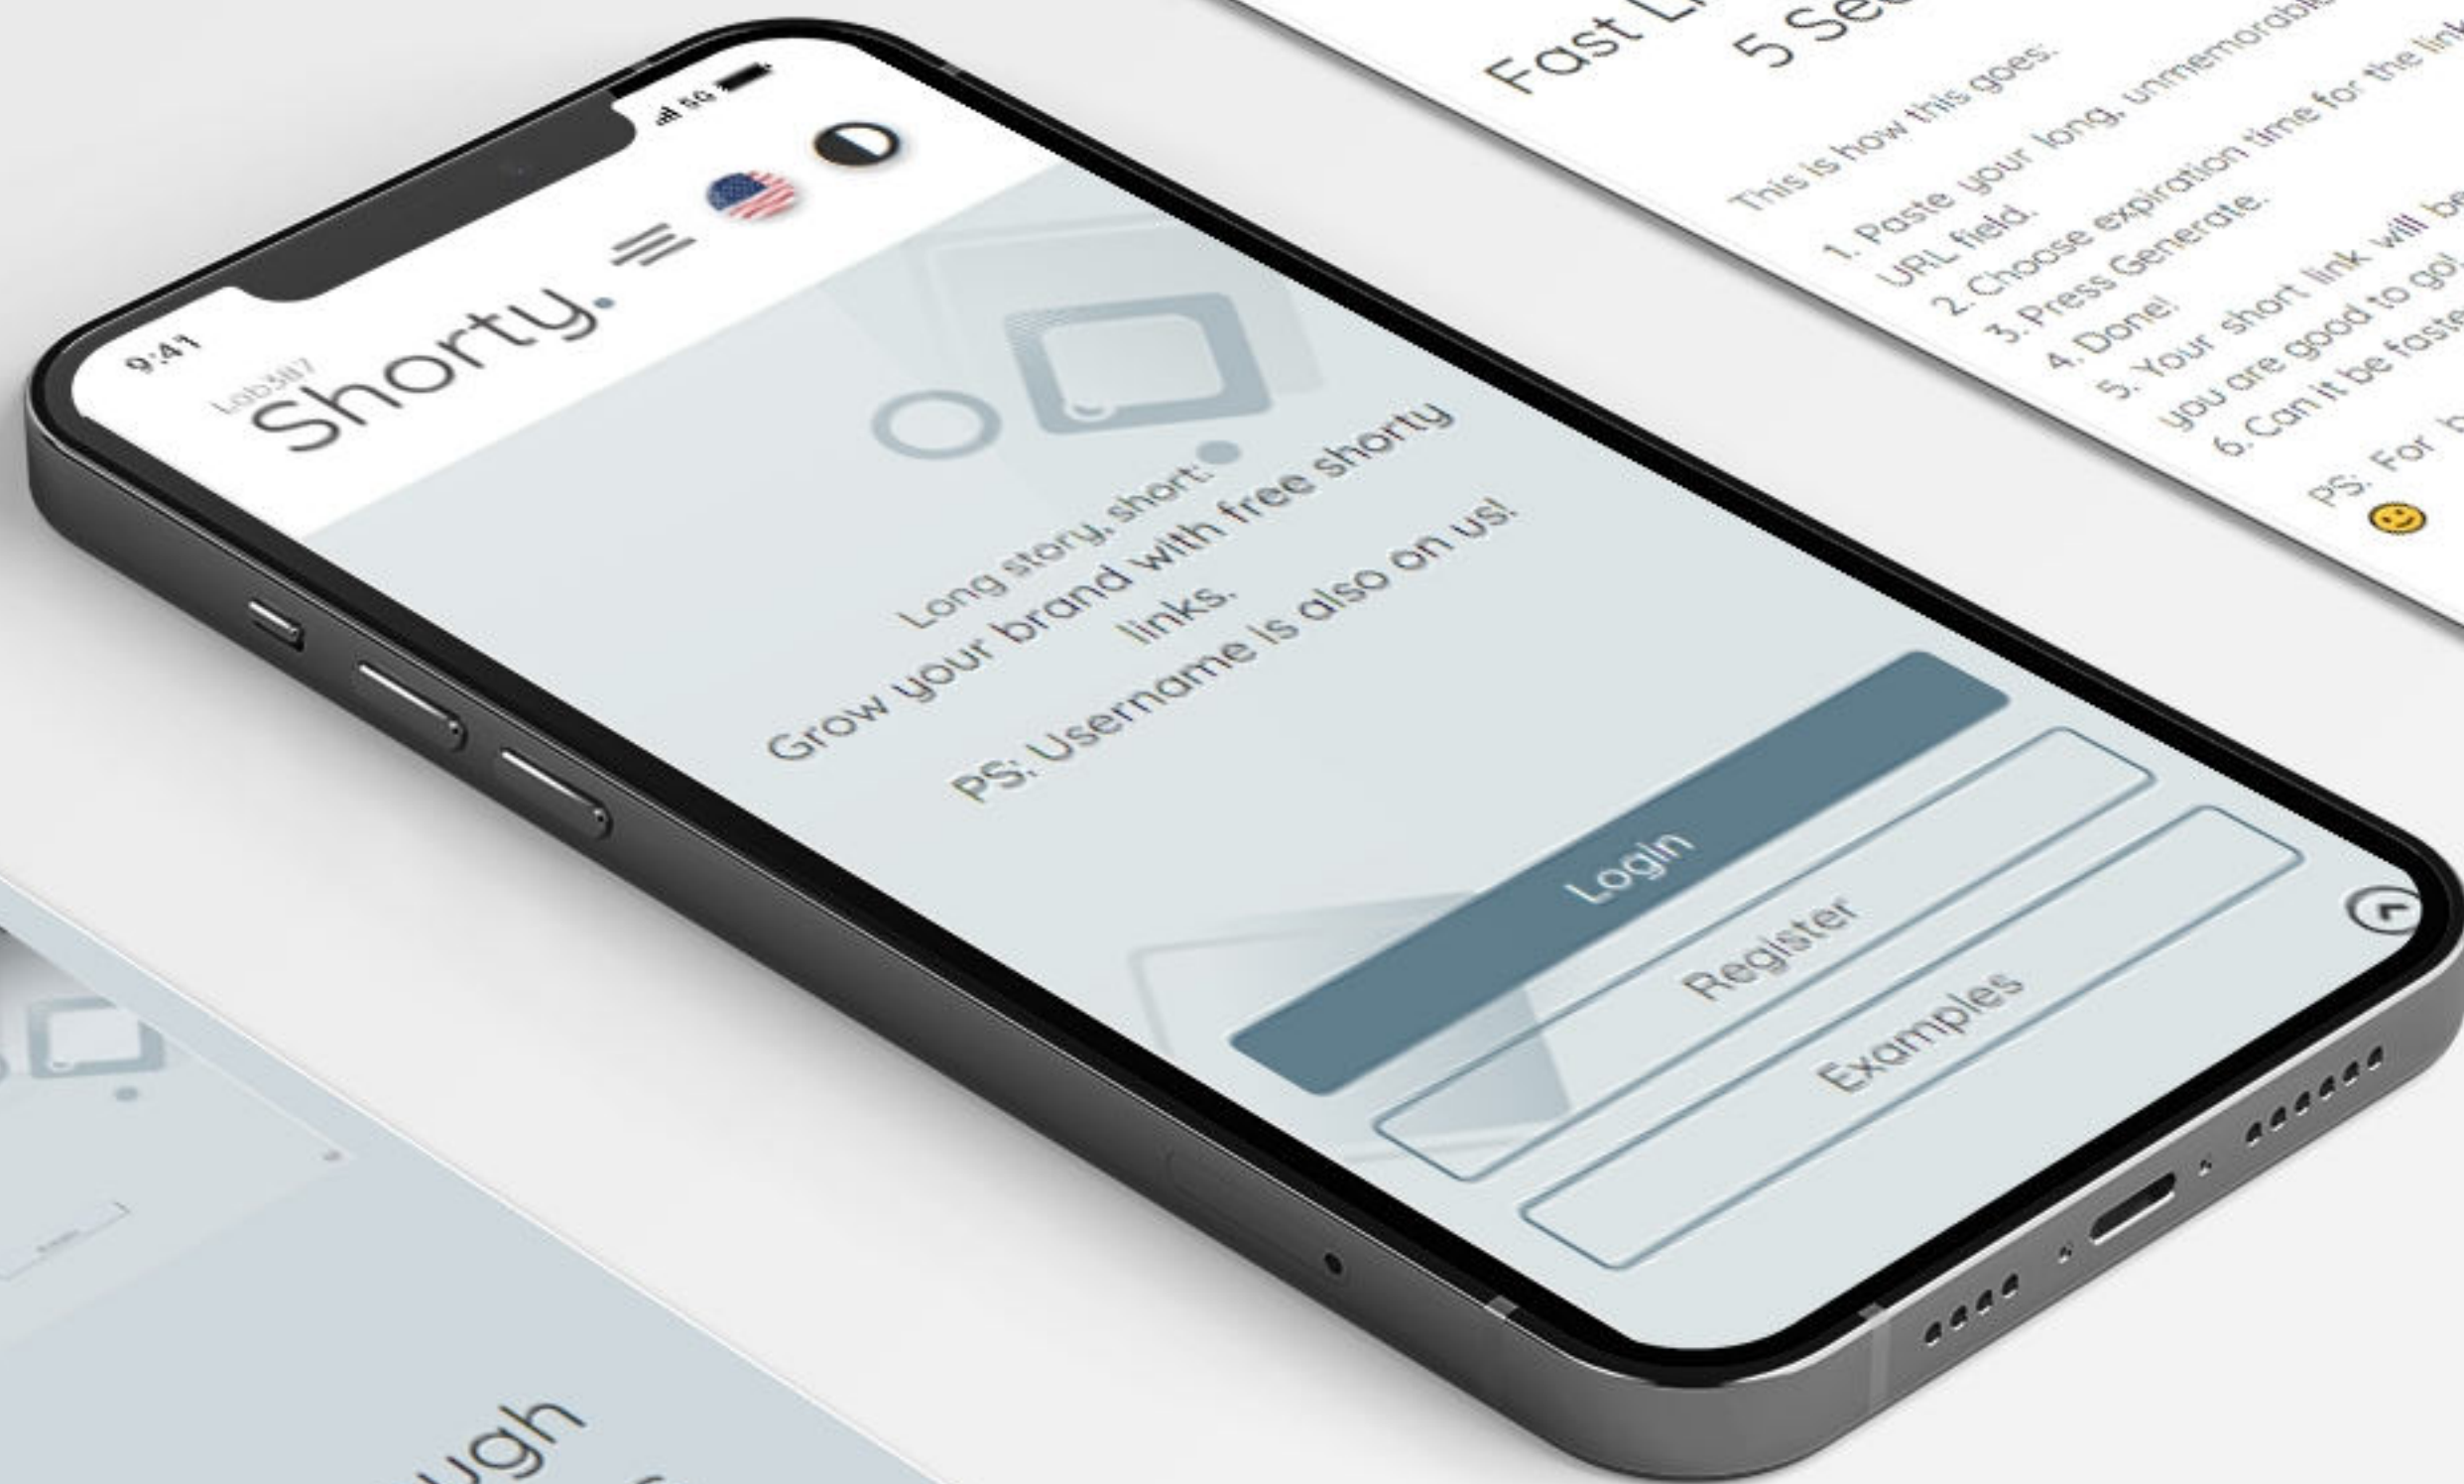

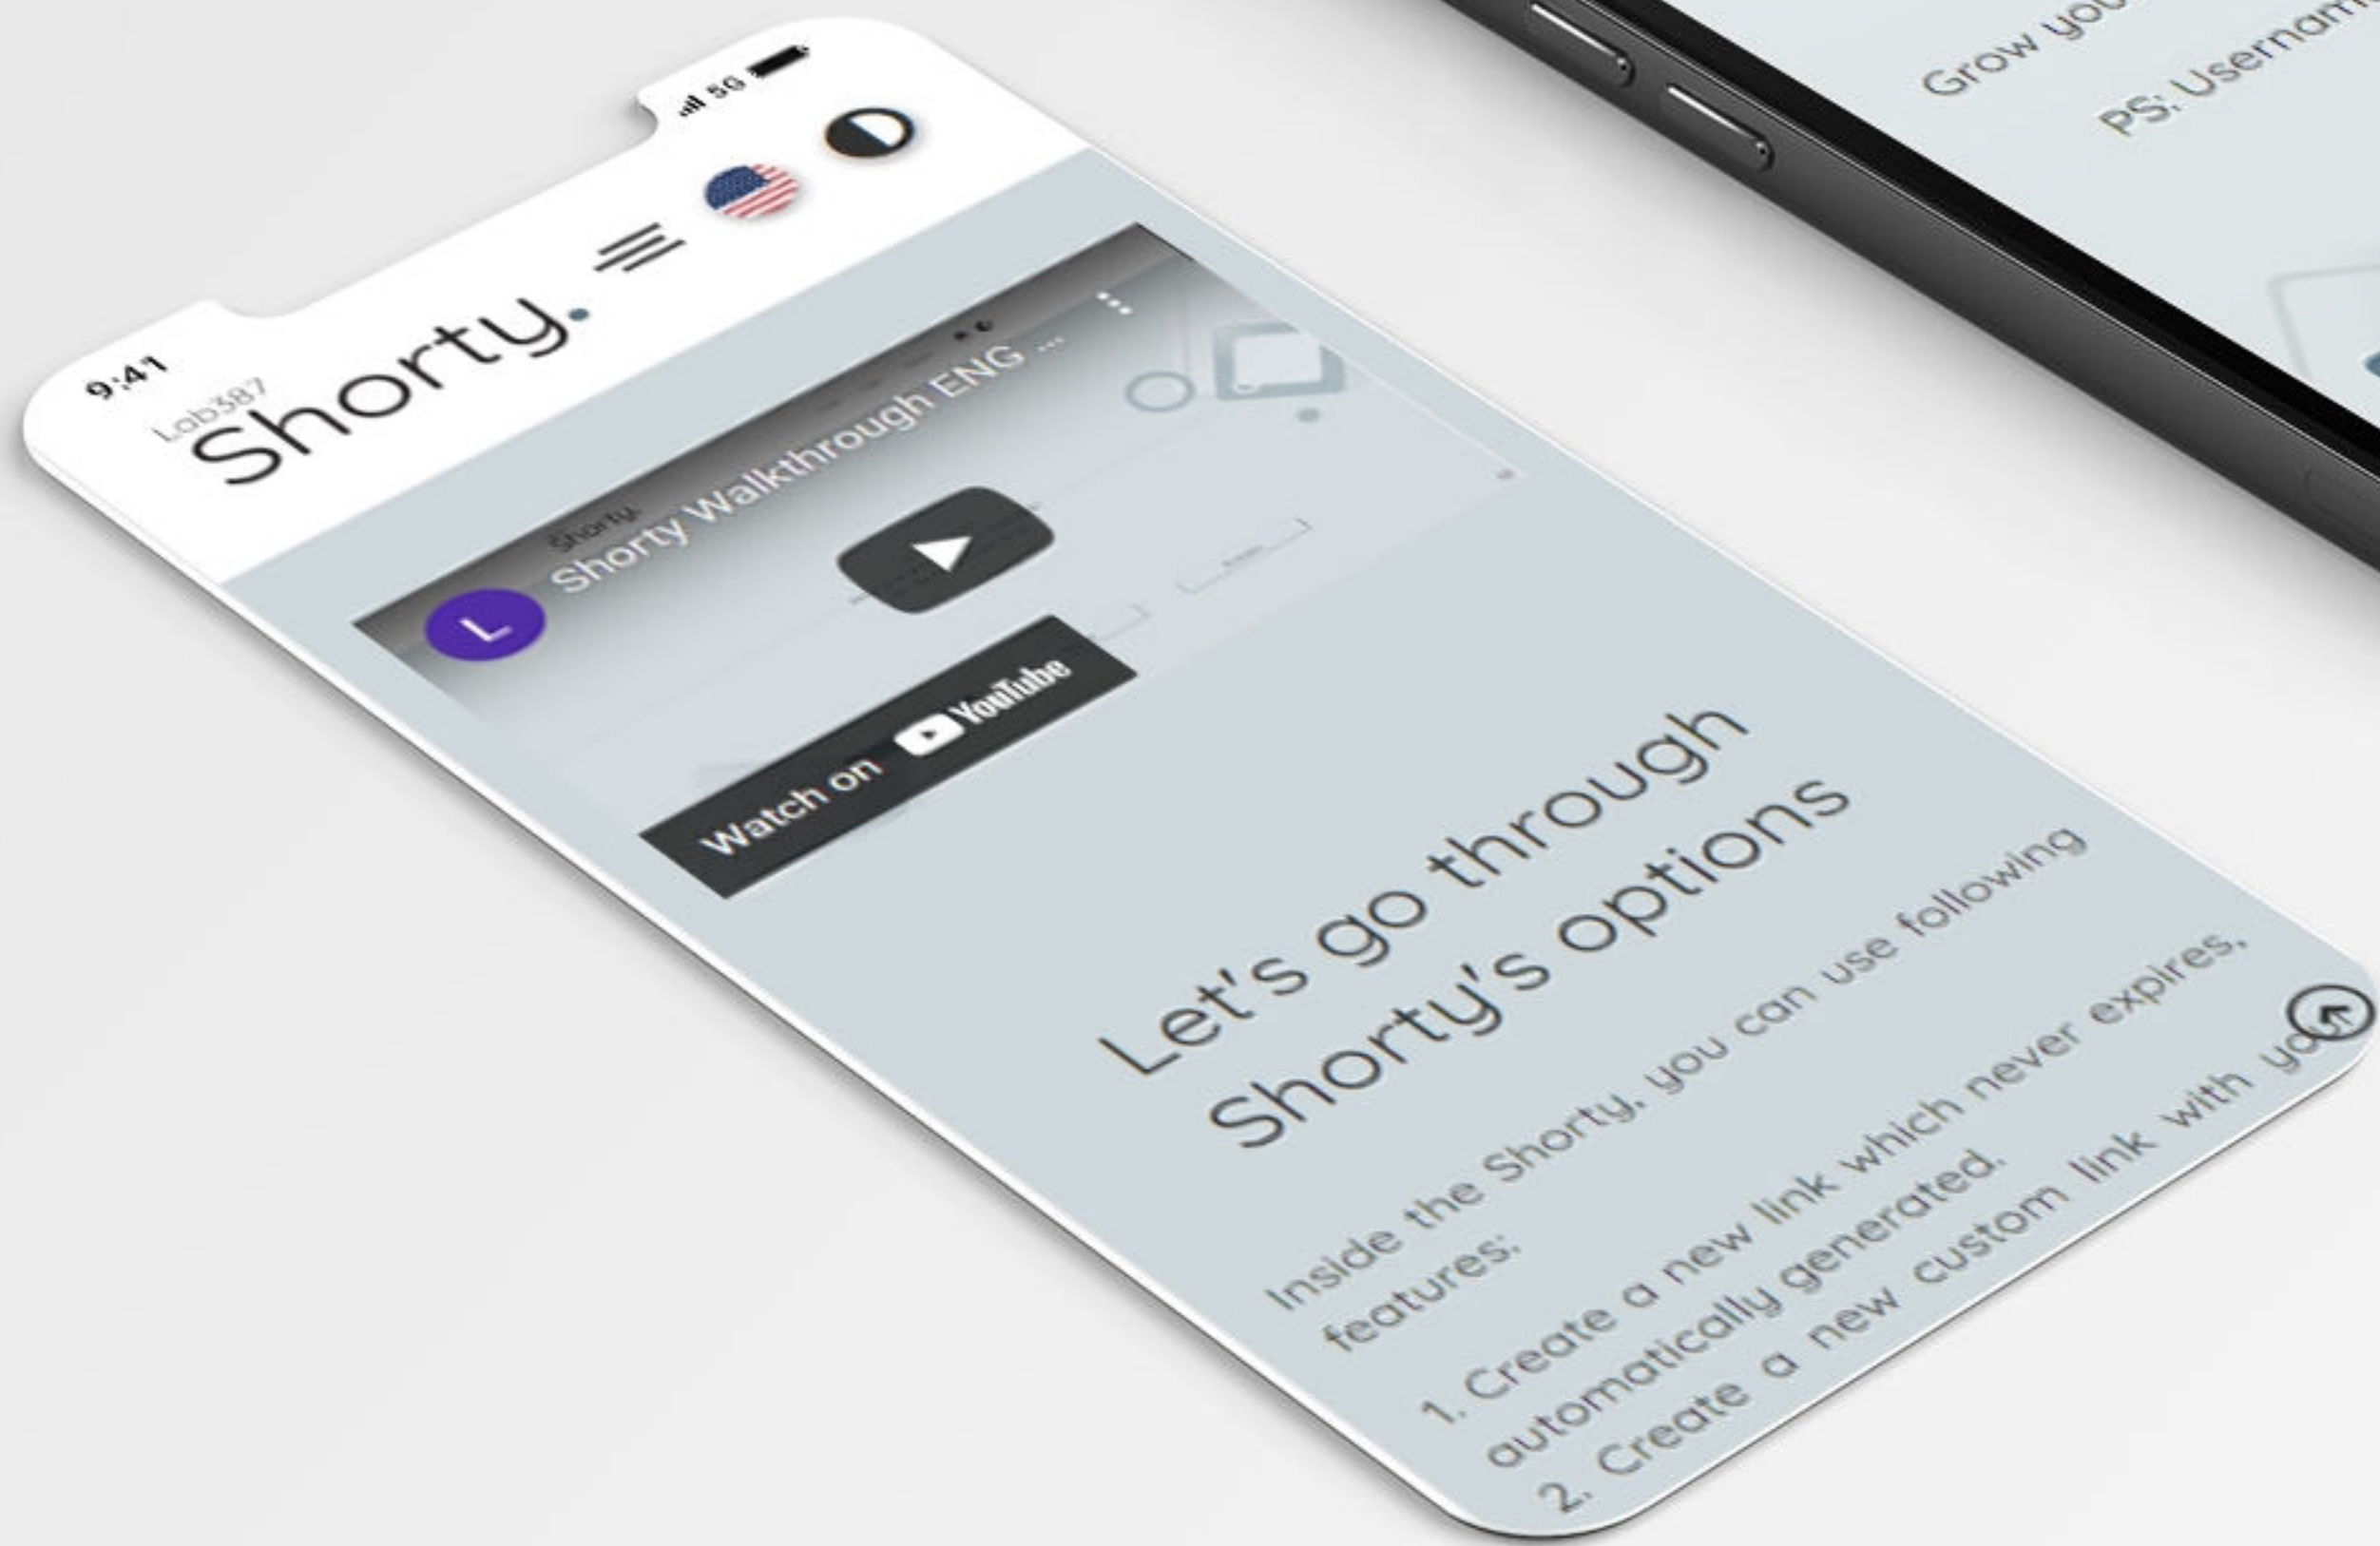

Continuing the trend of the Admin application, which set UX / UI standards for all other applications, we transferred this design to the Shorty application.

Although with one additional color that marks this application, and a slightly different logo, the user panel environment of this application is recognizable and adapted to the UX / UI design of the Admin application.

A user who once learned to use the Admin application system, has no problems using the Shorty application, which was certainly the goal.

UX / UI is done within Adobe XD tool.

Quizzy UX/UI

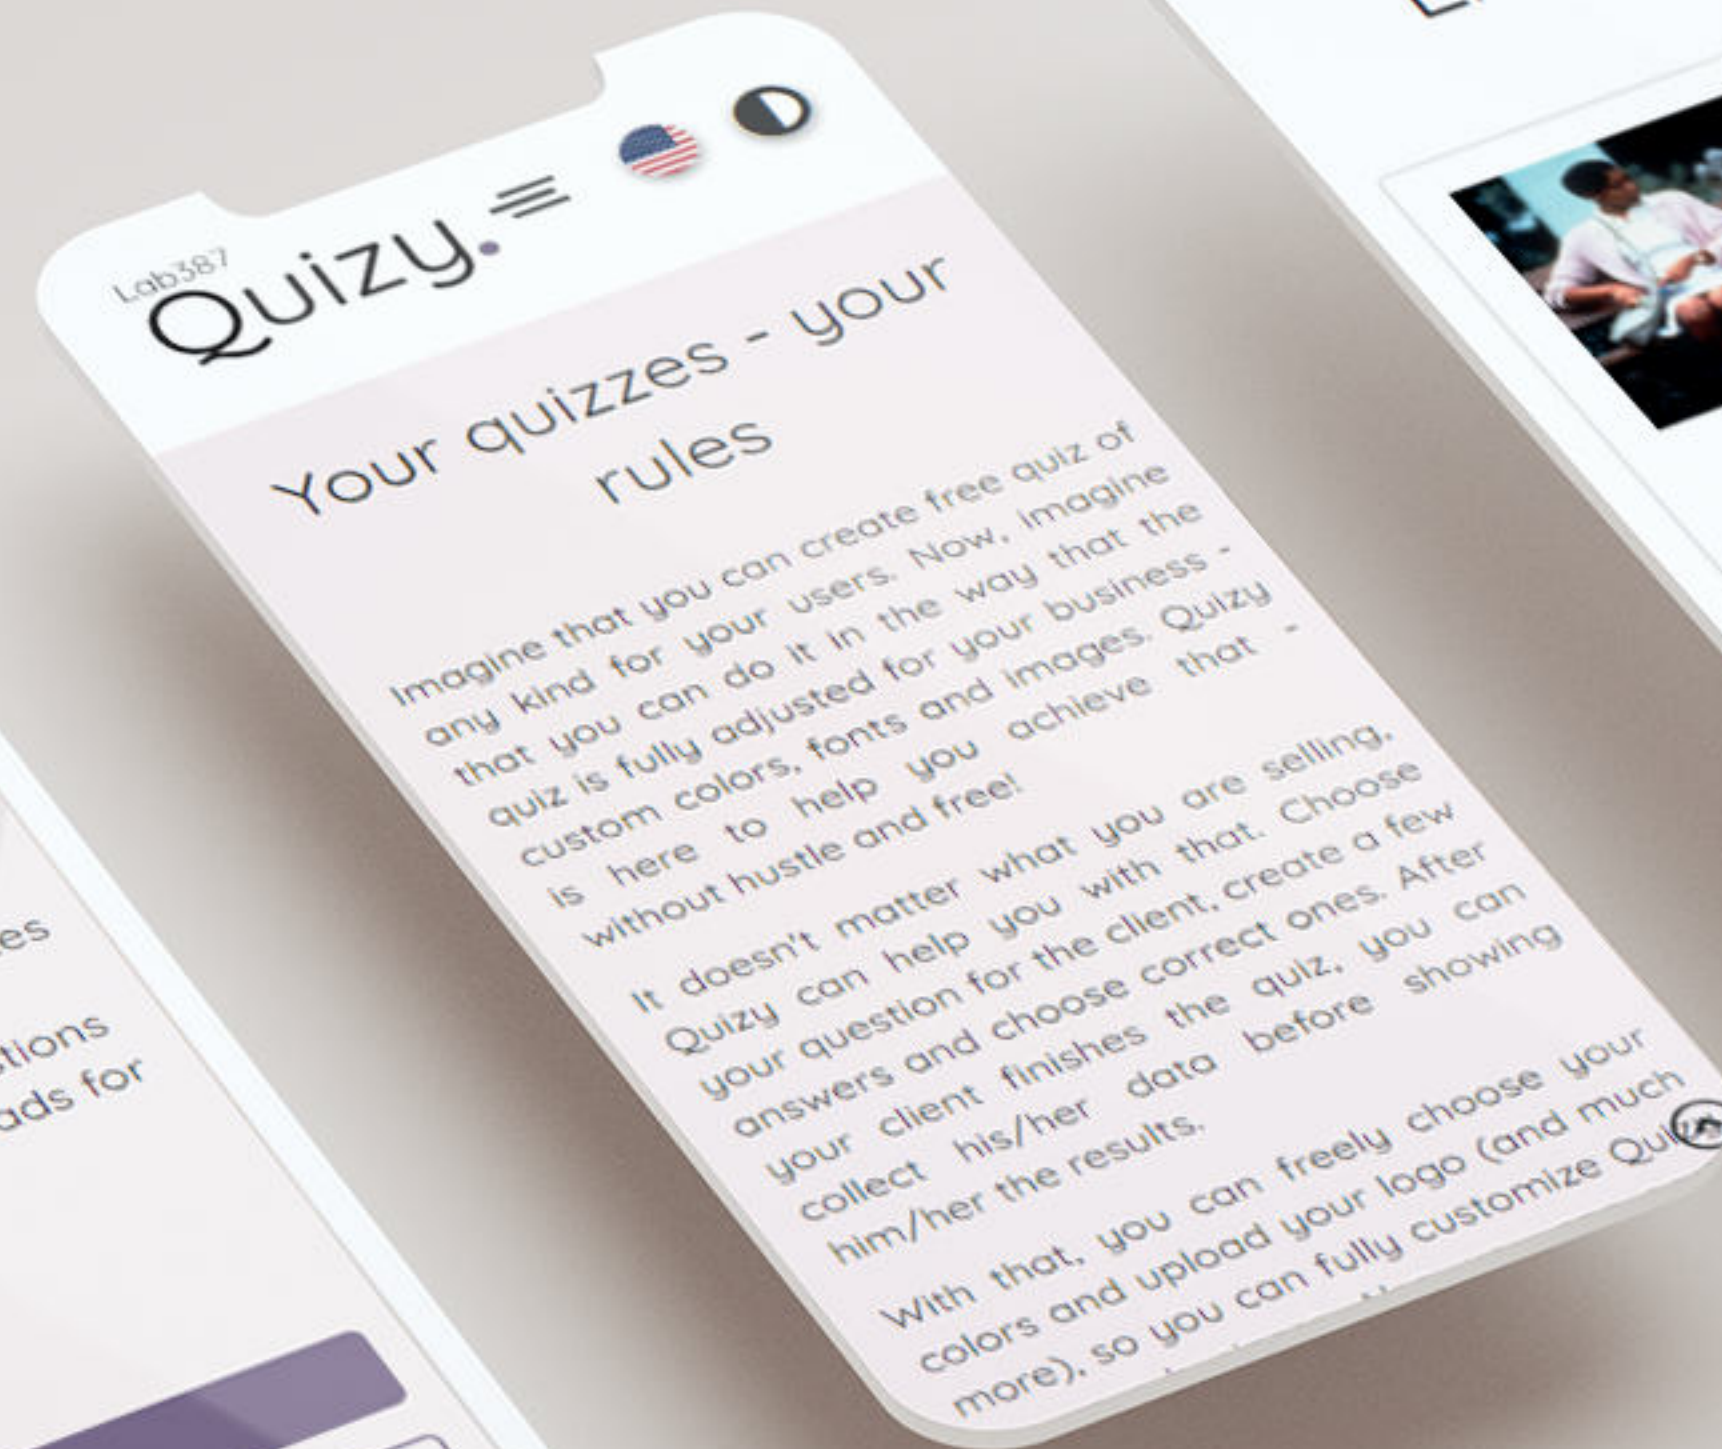

Continuing the trend of the Admin application that set UX / UI standards for all other applications, as well as the Shorty application that first came out of our company with Admin, we transferred this design to the Quizzy application.

Already known design with one additional color that marks this application, and a slightly different logo, the user panel environment of this application is recognizable and adapted to the UX / UI design of Admin and Shorty applications.

A user who has once learned to use the Admin or Shorty application system, has no problem using the Quizzy application, which was certainly the goal.

UX / UI is done within Adobe XD tool.

Calculy UX/UI

The Admin application set UX / UI standards for all other applications, along with the Shorty and Quizy applications, so we just decided to make this type of design our application standard, so we applied it to a new, Calculy, application.

Already known design with one additional color that marks this application, and a slightly different logo, the user panel environment of this application is recognizable and adapted to the UX / UI design of Admin, Shorty and Quizy applications.

A user who has once learned to use the Admin, Shorty or Quizy application system has no problem using the Calculy application.

UX / UI is done within Adobe XD tool.

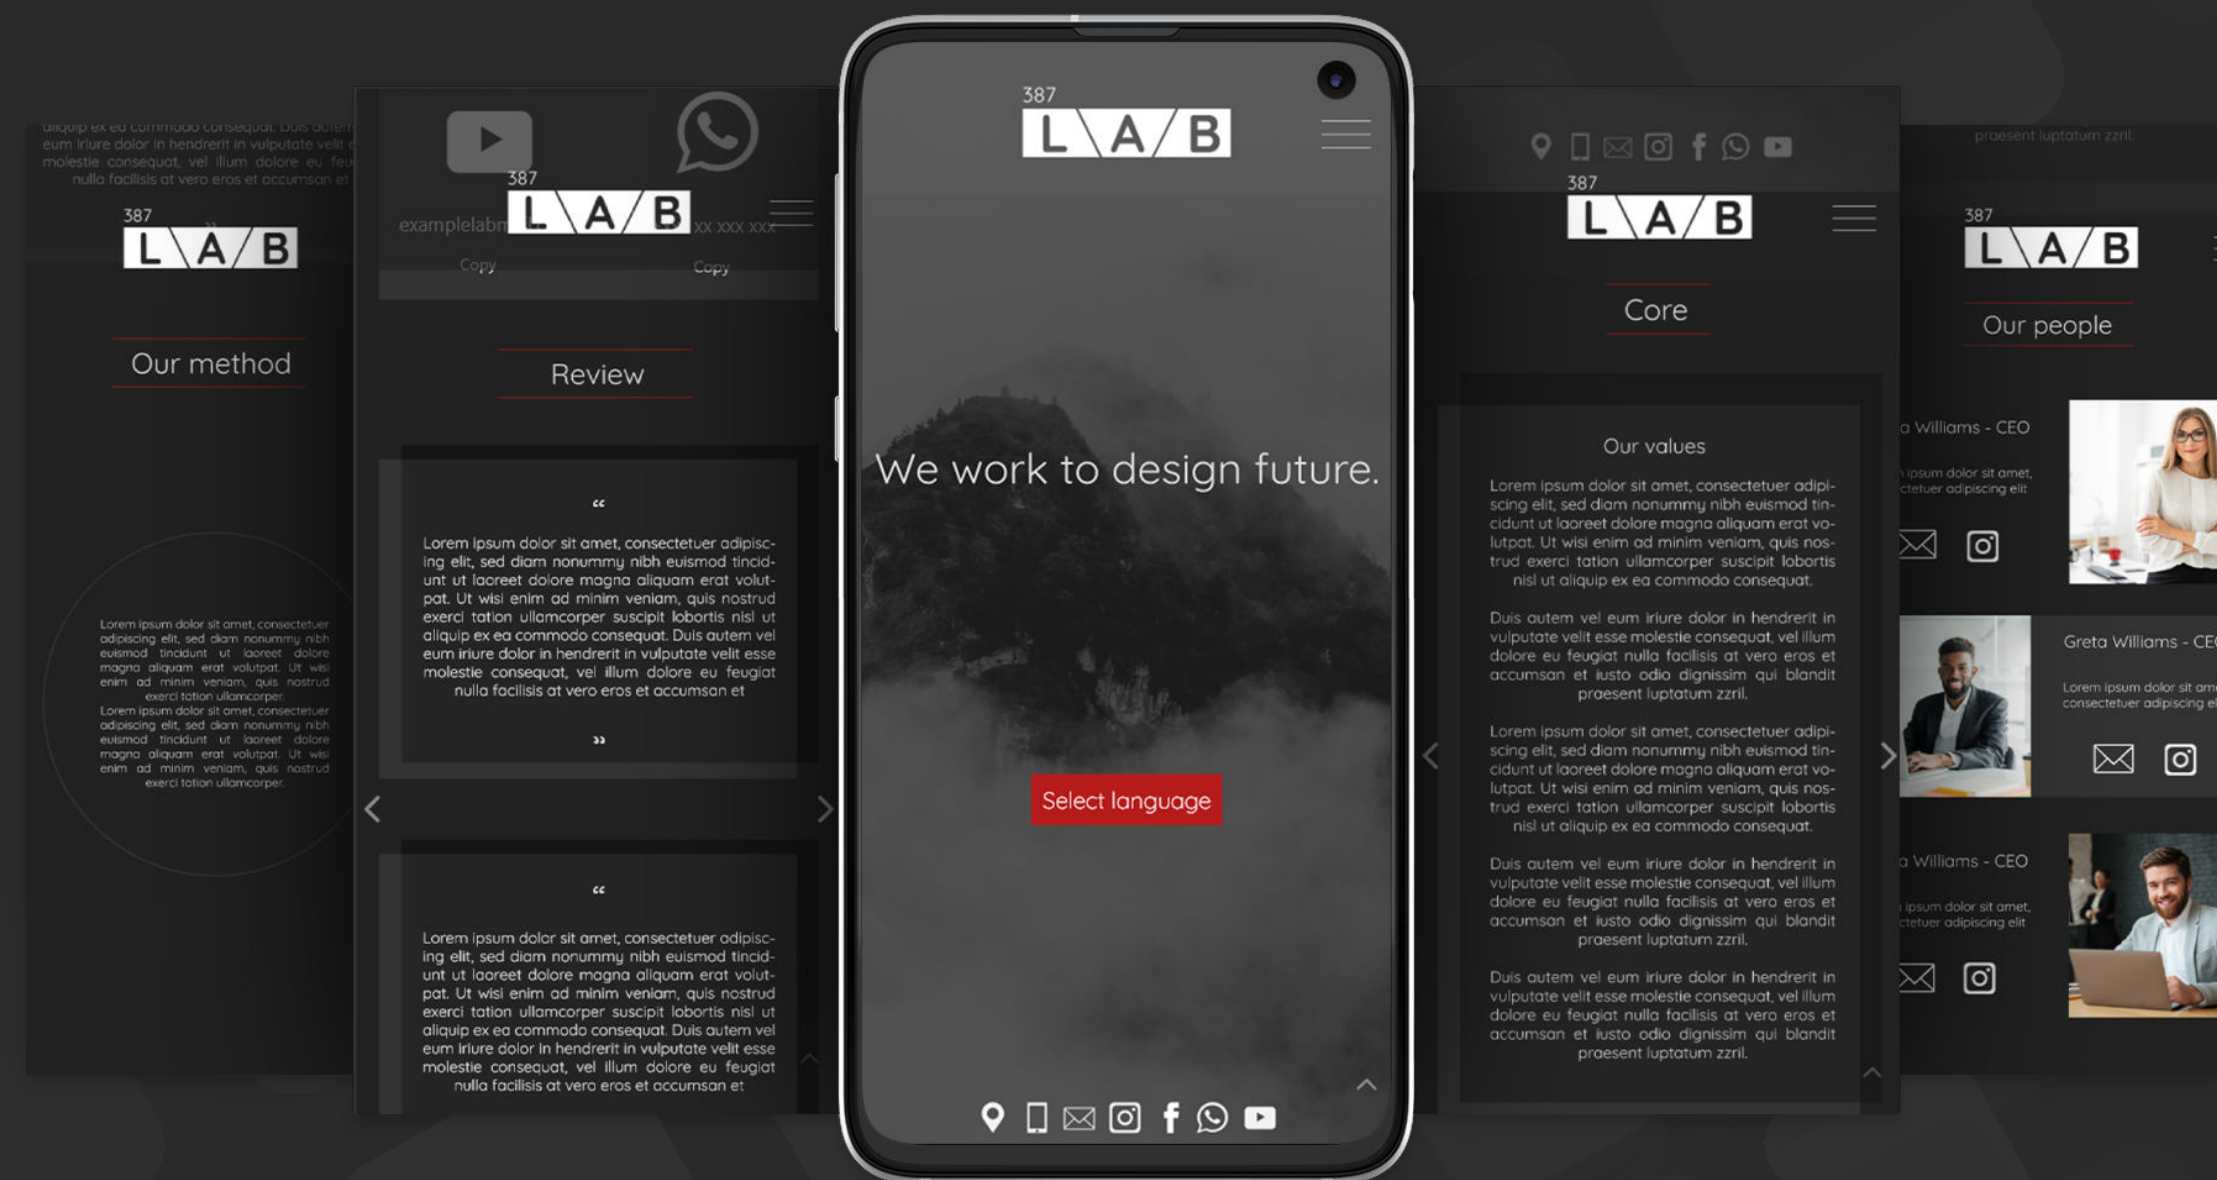

Lab387 UX/UI

In the first version (iteration) of the design for our website, we decided to create a modern, bold UX / UI design with simple and interactive elements that would present everything we are, what and how we do and what we offer as solutions to our clients.

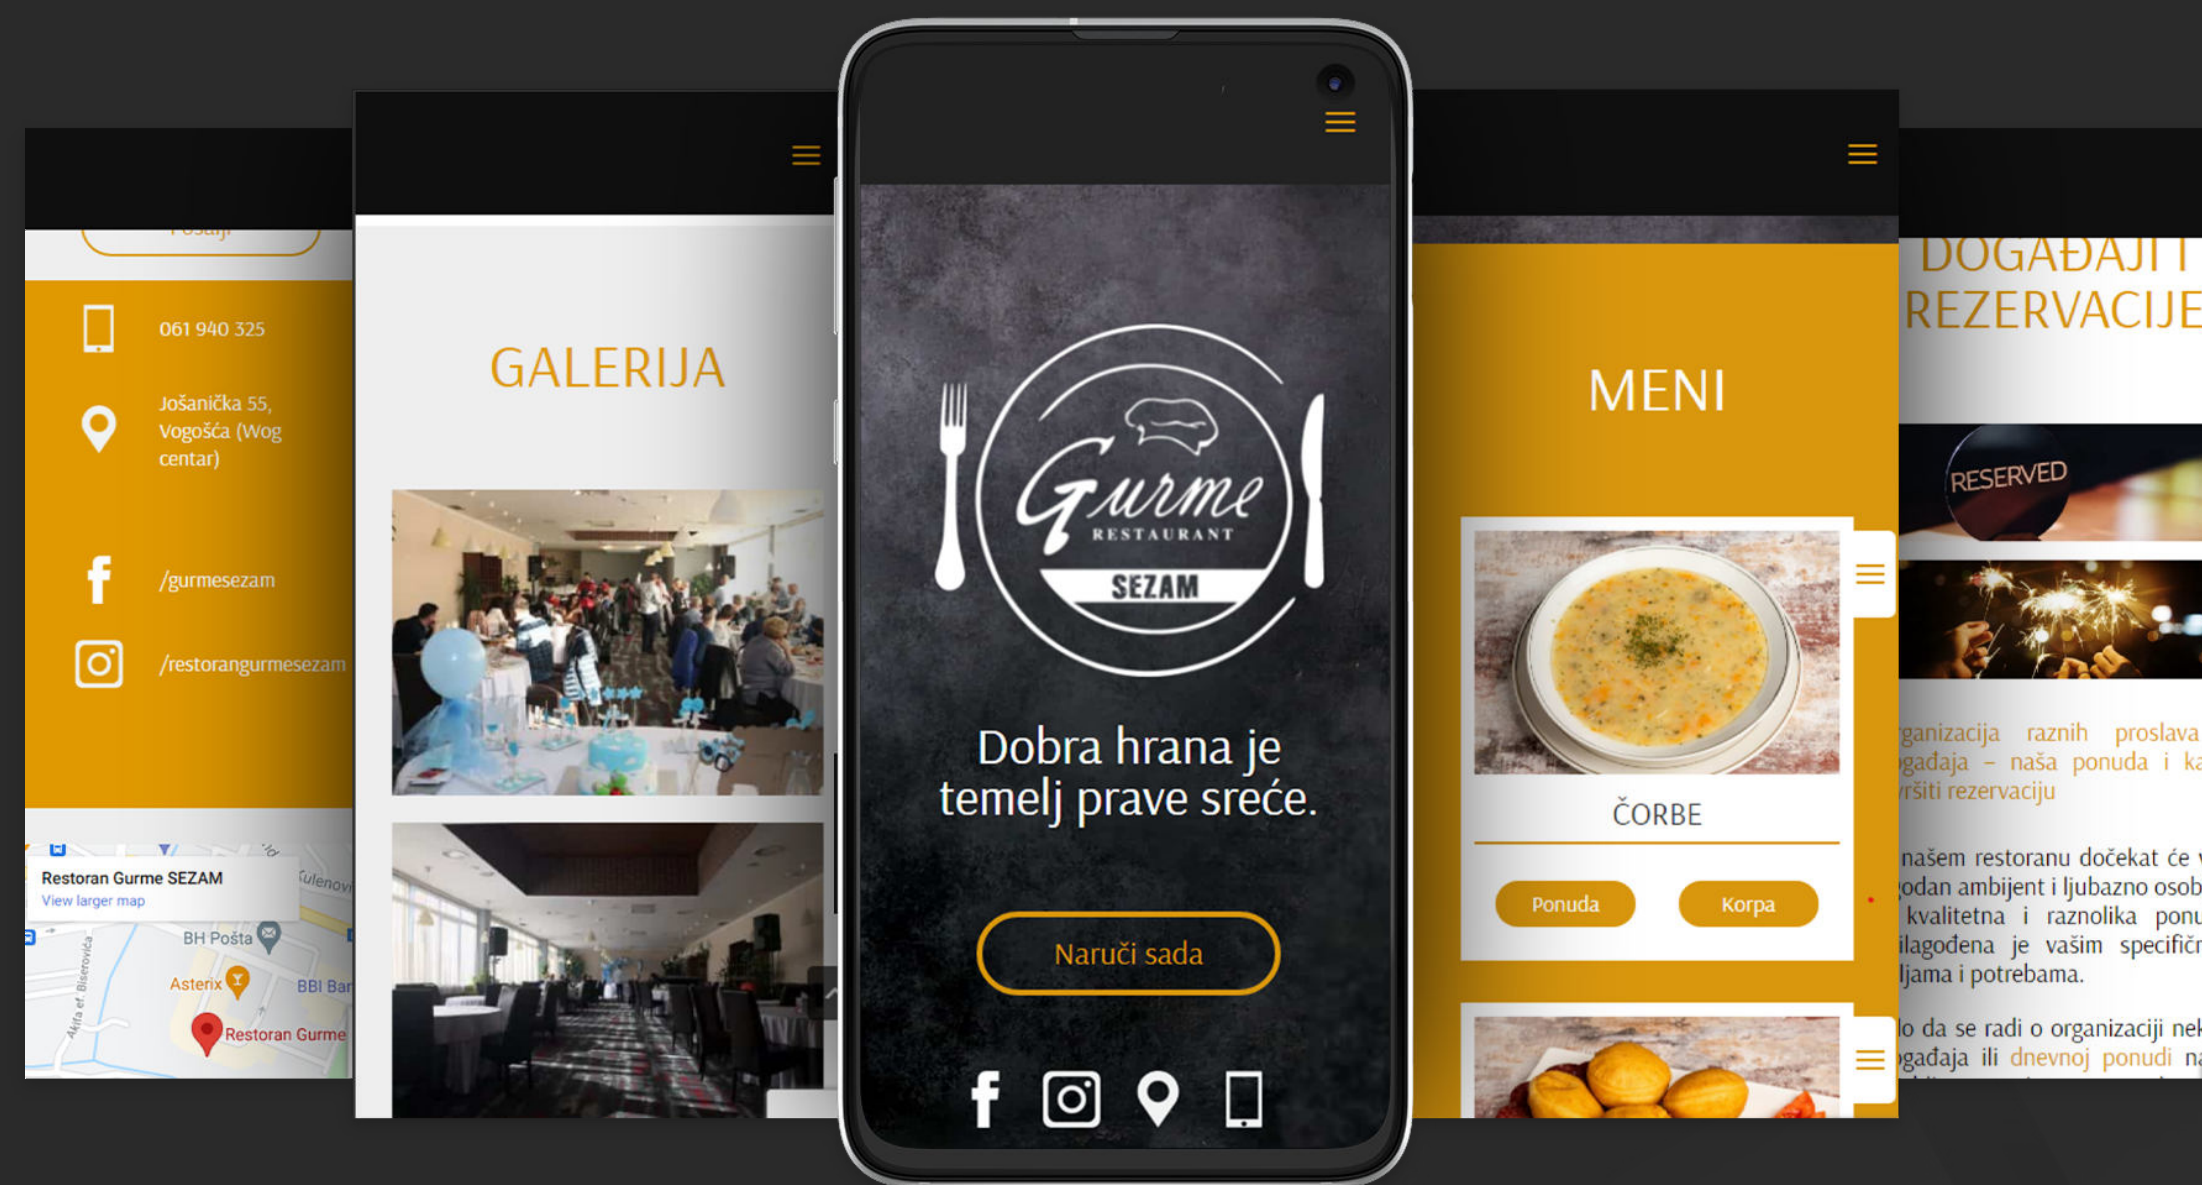

We have implemented different sections where each of them solves one part of the "problem" and presents information related to that segment, all the way to the final contact section.

The goal was to create a design that will represent a small journey of the visitor - from getting to know us, through getting to know what problems we solve, then to whom we solved those problems and what we can offer a new client to present contact information for potential, further cooperation.

UX / UI is done within Adobe Illustrator and Adobe XD tools.

Gurme Sezam UX/UI

For our clients, the Gurme Sezam restaurant, we have created a very simple and clear design for the website based on existing materials, the restaurant itself and mini research.

As we can see, the user on the main page has access to all important information, contact forms and order options that are connected to the korpa.ba system.

The goal was to make the design quite simple, to bring information to the forefront, where the most important thing was to be able to review the offer and connect to the ordering system.

UX / UI is done within the Adobe Illustrator tool.

Megatti Metals UX/UI

For our clients with a long tradition, based on existing materials, market research and conversations with them, we have created a dynamic, complex but also modern design.

This website, which contains a complex system of over 10 sliders built into each other, is still easy to use and users can easily navigate through interaction with a mouse, keyboard or touch on mobile devices.

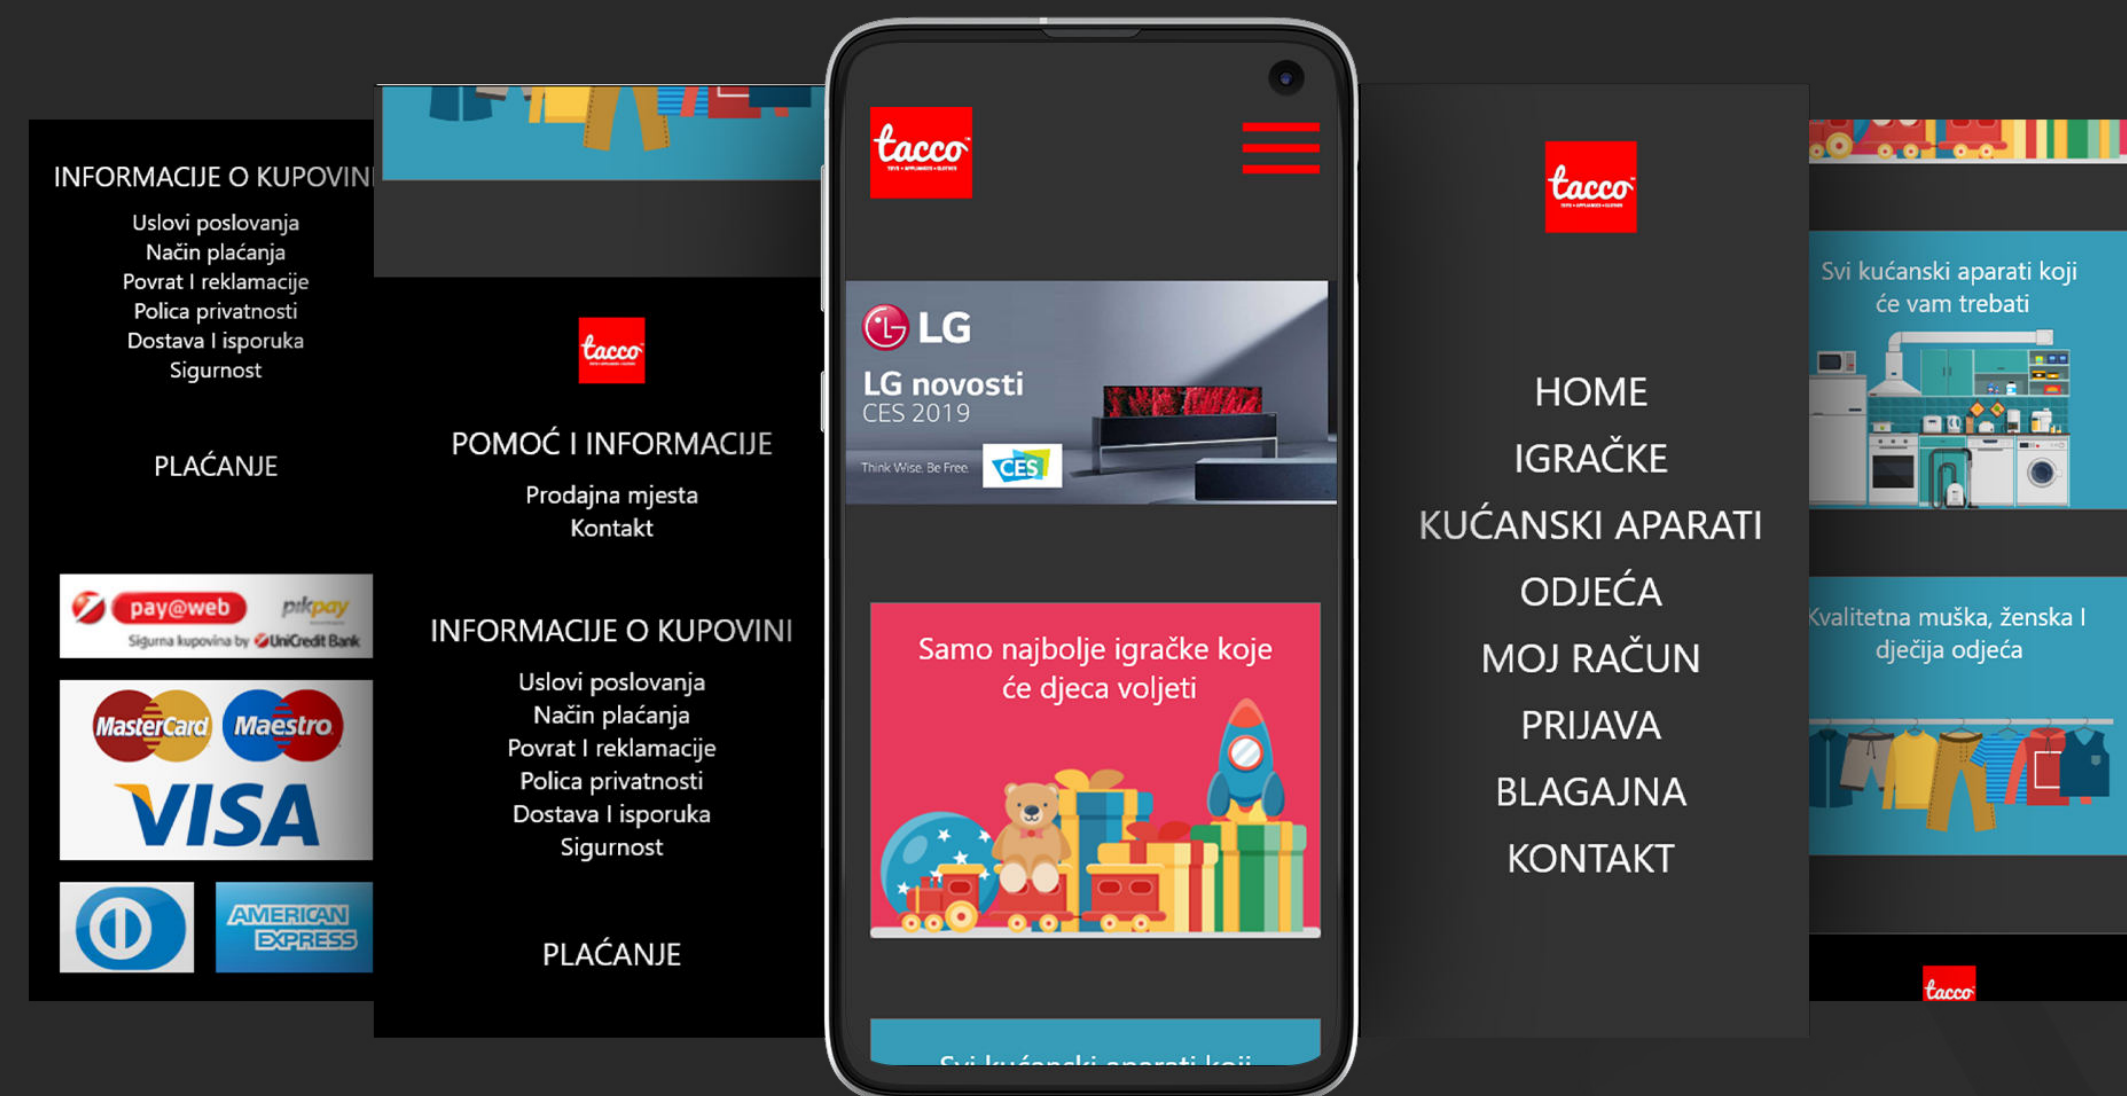

The goal was to create an unusual website for such an unusual company with an interesting field of interest and present all the important information such as what they do, who their clients are, photos of the workshop and contact information and the like.

UX / UI is done within the Adobe Illustrator tool.

Tacco UX/UI

For our clients we have created a very simple and modern UX / UI design for the web shoptacco.to.

Unfortunately, this web shop was never realized, but the idea of a specialized web shop with the same design that would remove obstacles and unnecessary information from the website immediately proved to be very good and interesting.

For this reason, we have created a UX / UI that just removes all irrelevant parts and puts only important information at the core of the web shop: what our customers sell and in which categories, how to order, pay and the like.

For the same reason, to draw attention to what is important we did not use actual photos for categories but flat design, and where actual photos would be contained later within each product.

UX / UI is done inside the Inkscape tool.

387

L / A / B

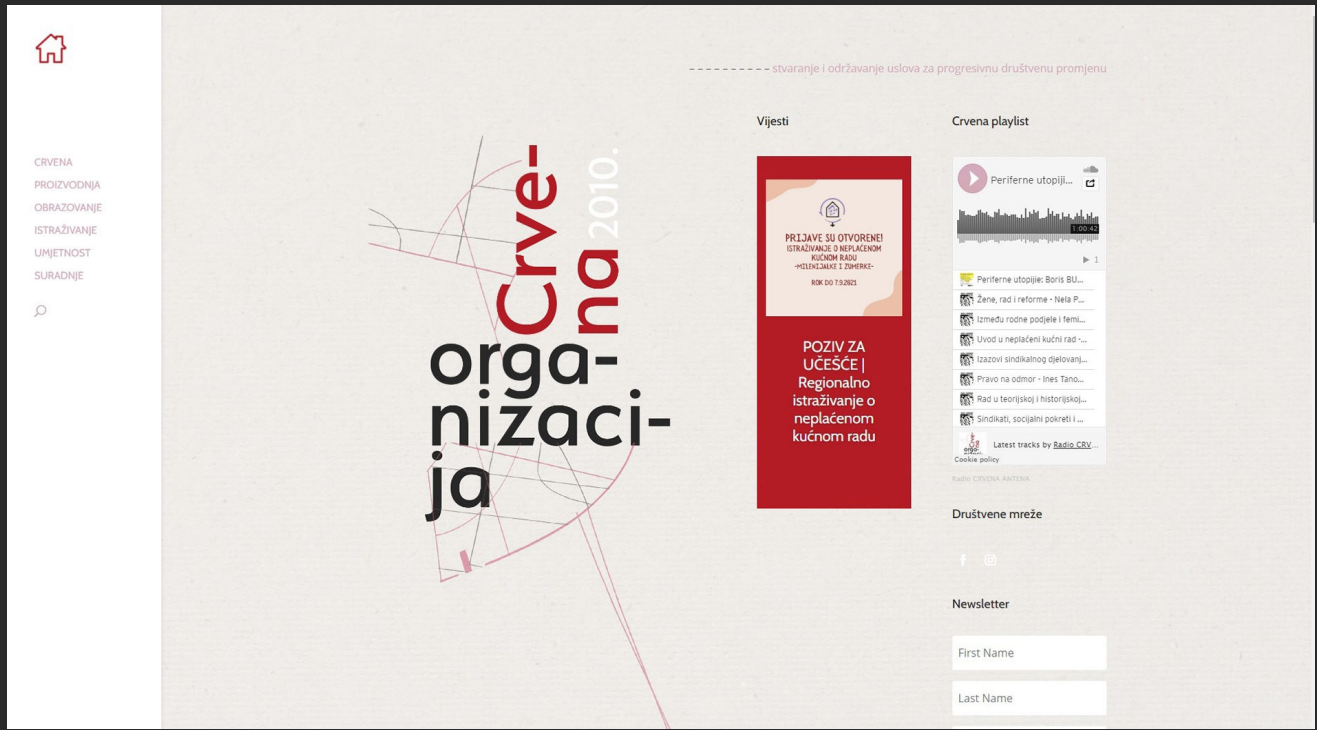

Setup and Maintenance

Below you can view the websites we have transferred to our platform and then made the necessary changes to get better, faster and more beautiful websites.

After that, we continued long-term maintenance.

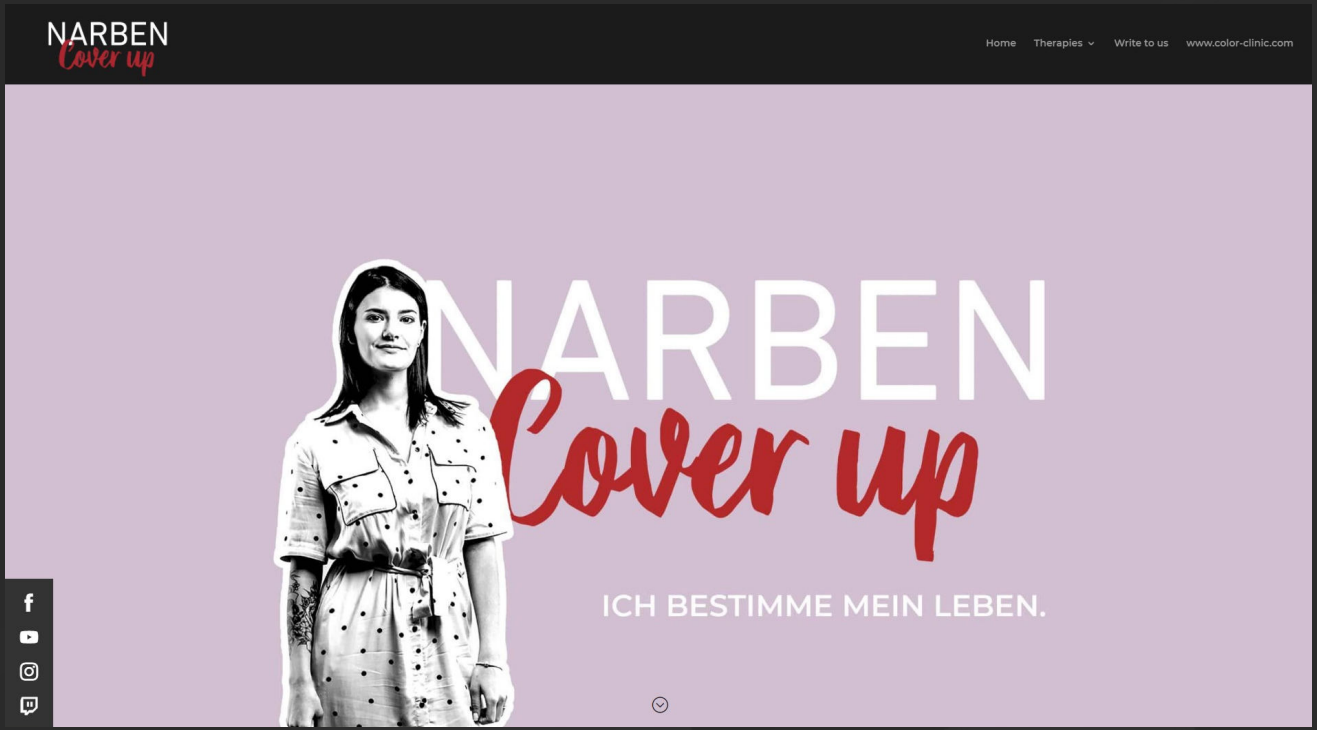

If you are interested in technical things, we have leased domain and hosting on a number of websites, adjusted settings, transferred the website, and for most of them we have implemented [CDN](#), [Caching](#), [Firewall](#), [2FA](#), [XSS Protection](#), [SQL Injection Protection](#), [Automatic Update](#), [Automatic Full Backup](#), [Remote Storage Backup](#), [Image Optimisation](#), [Database Optimisation](#).

GRAPHICS

Branding

Marketing

Branding

Here you can see all the projects we have worked on in the field of graphic design. Our work in this area is primarily based on creating a logo for branding, where we have different types of requirements and needs.

These requirements and needs include creating a logo "from scratch", together with other branded materials, editing an existing logo or preparing a logo for printing - creating a vector version from raster graphics (images / photographs).

Also, here you will see a subsection dedicated to personal brands, ie logos for people of different professions and logos for superheroes - our small artistic contribution.

All our logos come ready for use on the web and for print, in all necessary formats, resolutions as well as variants such as white, dark, inverse and for use on different types of substrates.

Logo

387

L A B

Lab387

For our personal logo, we chose the black and white version to leave space and the ability to create similar versions of the logo in other colors for our applications.

The letters of the company are in different shapes, to show dynamic and innovation, while on the other hand the left and right shapes are a mirror of each other, which shows stability together with the middle element that fits between the first and third.

Quicksand was chosen for the font, the basic font that you can find from our logo to all other graphic materials and web pages / applications.

Bharosa

We created a modern, bold and interesting logo for our client, with whom we also collaborated on the web shop.

For the basic font in the words "Bharos" we chose the written font to convey the spirit, nature and fact that it is a personal brand and that it is intended for the same type of clients.

A simple, thin and clean font was chosen for the word "jewelry".

In addition to the words "Bharosa jewelry", we also created a bracelet through flat design to further enrich the logo and make it recognizable.

The bracelet has brown beads to clearly present the rudraksha, the basic material from which this type of bracelet is made, but it also has green leaves to indicate the nature, spirituality and everything that is important for these products and our client's brand.

Žena ipo

We have created a modern, playful and dynamic logo for our client in order to present her brand and services in the best way.

We decided on a modern and unusual font, whose text "Žena Ipo" goes beyond the circle in order to emphasize the unusual and different, better access to services than the competition and to underline the brand name.

To make it clear which services this brand deals with, we have added a makeup brush with pink and gold paint. Thus, we have brought a dose of modernity and exclusivity to this brand.

Programmar

For our CEO, we have created a modern and simple logo in long and short variants.

The name of the personal brand "Programmar" is composed of the words "Programmer" and "Amar", so we decided to put the letter "A" which is most important in a short version of the logo.

The letter A is made by hand and differs from other letters within the longer version of the logo.

The dice in the short version and the dice in the long version are essentially what the personal brand is intended for - programming, or assembling "digital dice" in order to obtain a quality digital product.

The logo was created in a dark and light version without additional colors to emphasize the simplicity, minimalism and seriousness of the brand itself.

Cake Art by Little Bakery

We have created a simple and modern logo for our client to present the services of making delicious cakes and pies.

To avoid the effect of what has already been seen, this logo does not contain graphics in the form of cakes or cookies.

Instead, we chose brown for the font for exclusivity, the written font for the words "Little Bakery" and rotated all elements except "Cake art by" to the left.

In this way, we got an interesting, simple and memorable logo for the services of this brand.

In addition to this, the logo was of course created in white and dark variants for application on all types of substrates.

Cvjećara Dar

For our client, we have created a modern and unusual logo that represents the services of selling and arranging flowers.

The complete text is placed in one frame together with a flower on top to simulate a wrapped gift on one side, and present the brand name and what it does on the other side.

The word "Gift" together with the detail from the flower is set in red, according to the client's wishes, and which fits perfectly and reminds of the color of roses - probably the most famous flower in the world.

Moja Optika

In collaboration with our client, we redesigned the existing logo and created a modern, timeless version of the logo for eyewear sales services.

The element of the glasses, which was created by hand through joint work, we have enriched with a simple, thin and modern font with the name of the brand "mojaoptika".

For the sake of exclusivity and to present an interesting shopping experience in this company, we colored the word "mine" yellow.

Therefore, we emphasized that the brand itself is dedicated to its customers, their happiness and satisfaction.

Kupi Naočale

For our client, the brand MojaOptika, we have developed, in addition to the web shop, a complete brand for the sale of glasses via the web - "kupinaocale.com". For this brand, together with the client, we have created an unusual and modern logo composed of exactly two elements that serve when measuring and checking diopters.

We chose burgundy and dark gray, and we supplemented the graphic element with the words "kupinaocale.com" where we put the glasses in the primary burgundy color, and the rest of the text in dark gray.

Of course, we signed the primary brand "by Moja Optika" in the lower right corner.

Moja Gradnja

For our long-term client with whom we have collaborated on various projects, we have created both a modern and dynamic logo.

The three burgundy houses are the main occupation of the company itself, and that is the construction of different types of houses and jobs related to that area. In addition, in addition to the logo, we only added the name of the company and the website so that clients could immediately start further contact with our client.

Burgundy was chosen as the basic color to show strength, dynamism and diversity from the competition itself, while gray was chosen as additional - to distinguish between elements.

Quizy app

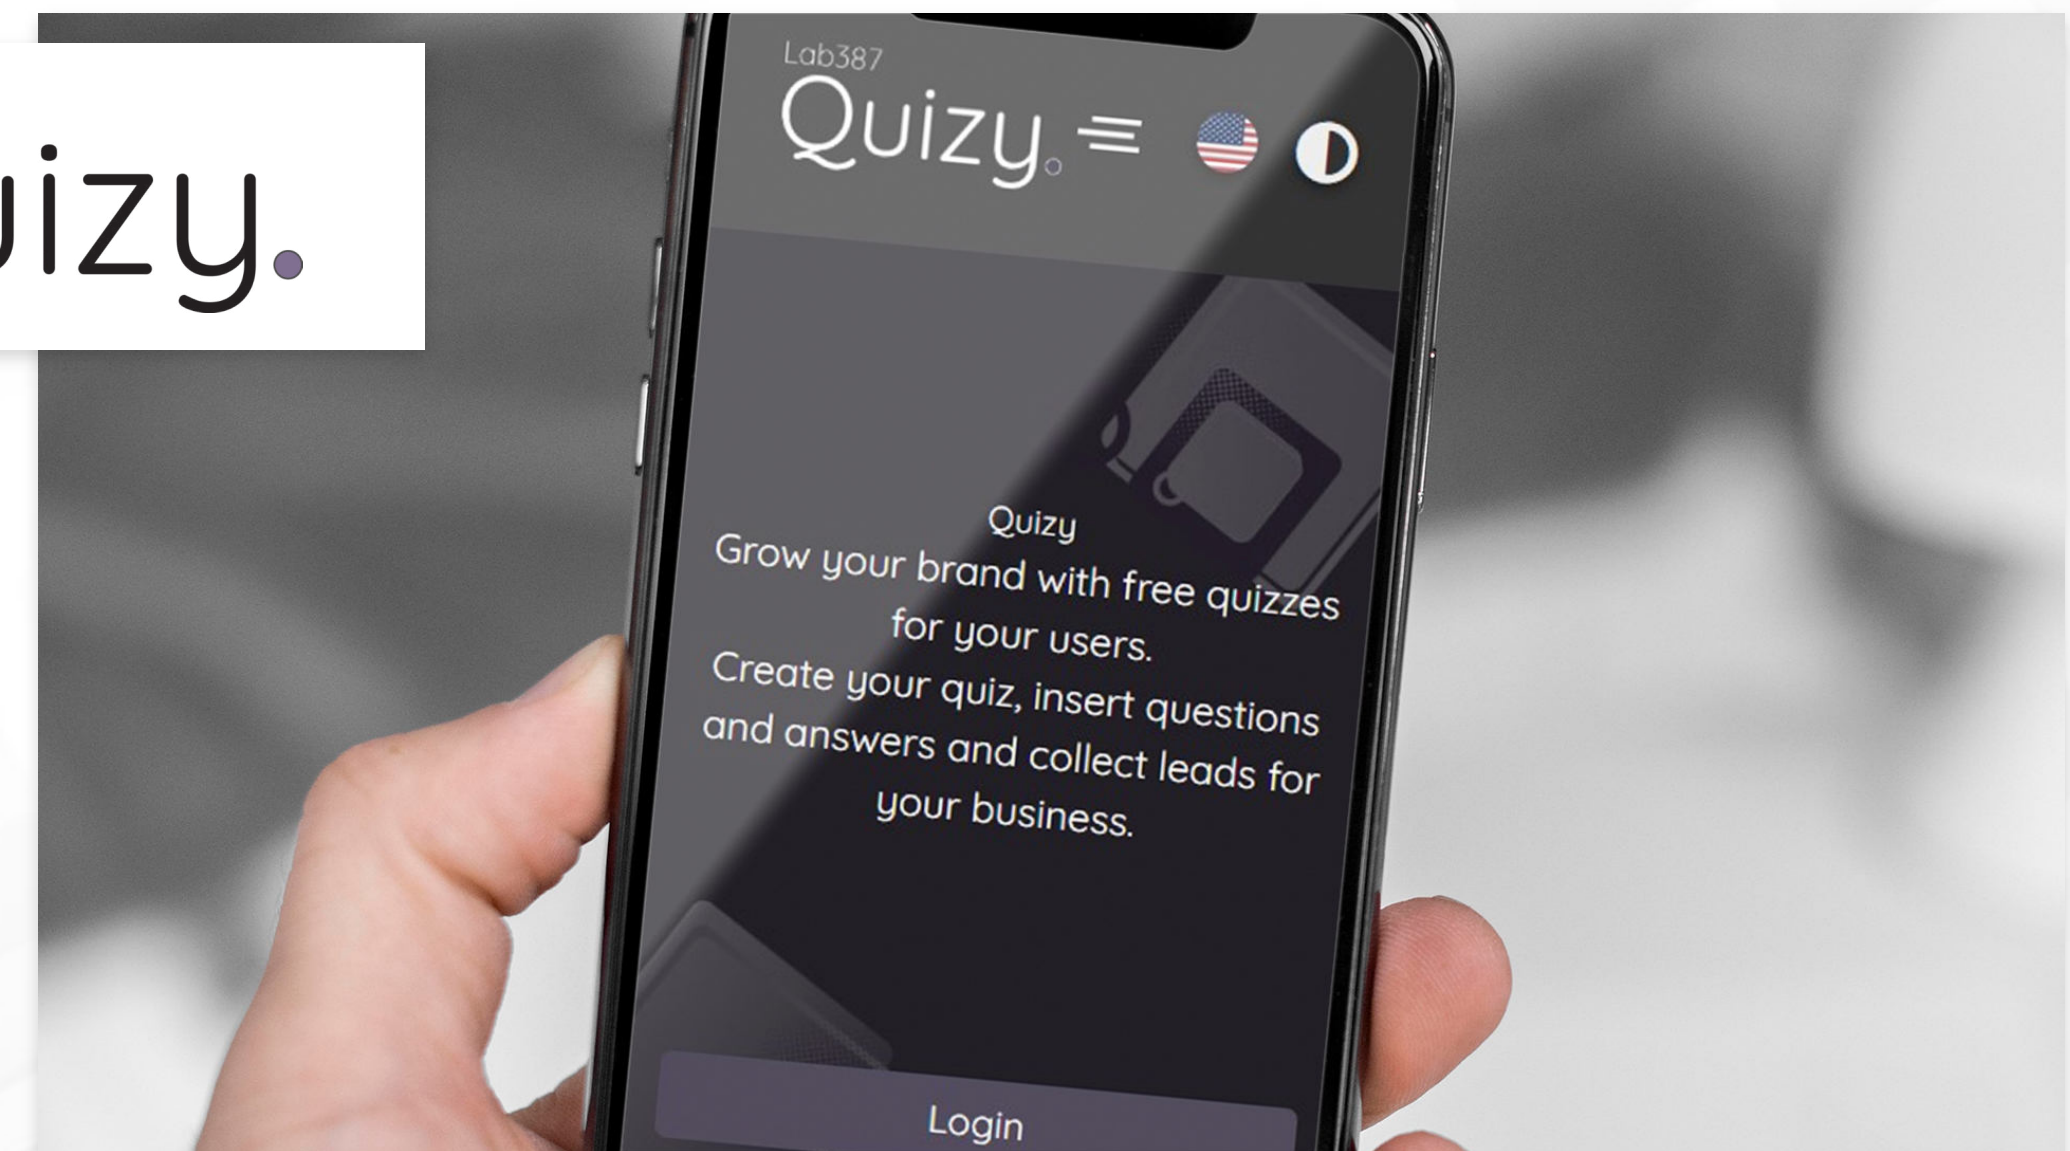

Lab387
Quizy.

For the needs of our Quizy app, we have created a very simple and memorable logo.

The logo is printed in Quicksand font and the name of the company "Lab387" is placed above, which is how we indirectly and directly connected this application with the company.

The point at the end is the visual representation that it is not necessary to look for other applications for creating quizzes, that is, that it is simple and adapted to everyone and that it does not need additional explanations.

The color inside the dot indicates the selected base color for the application - light purple.

Lab387
Shorty.

Shorty app

For the needs of our Shorty application, we have created a very simple and memorable logo.

The logo is printed in Quicksand font and the name of the company "Lab387" is placed above, which is how we indirectly and directly connected this application with the company.

The point in the end is the visual representation that it is not necessary to look for other applications for creating and managing short links, ie that it is simple and adapted to everyone and that it does not need additional clarifications.

The color inside the dot indicates the selected base color for the application - light blue.

Translately

Lab387
Translately.

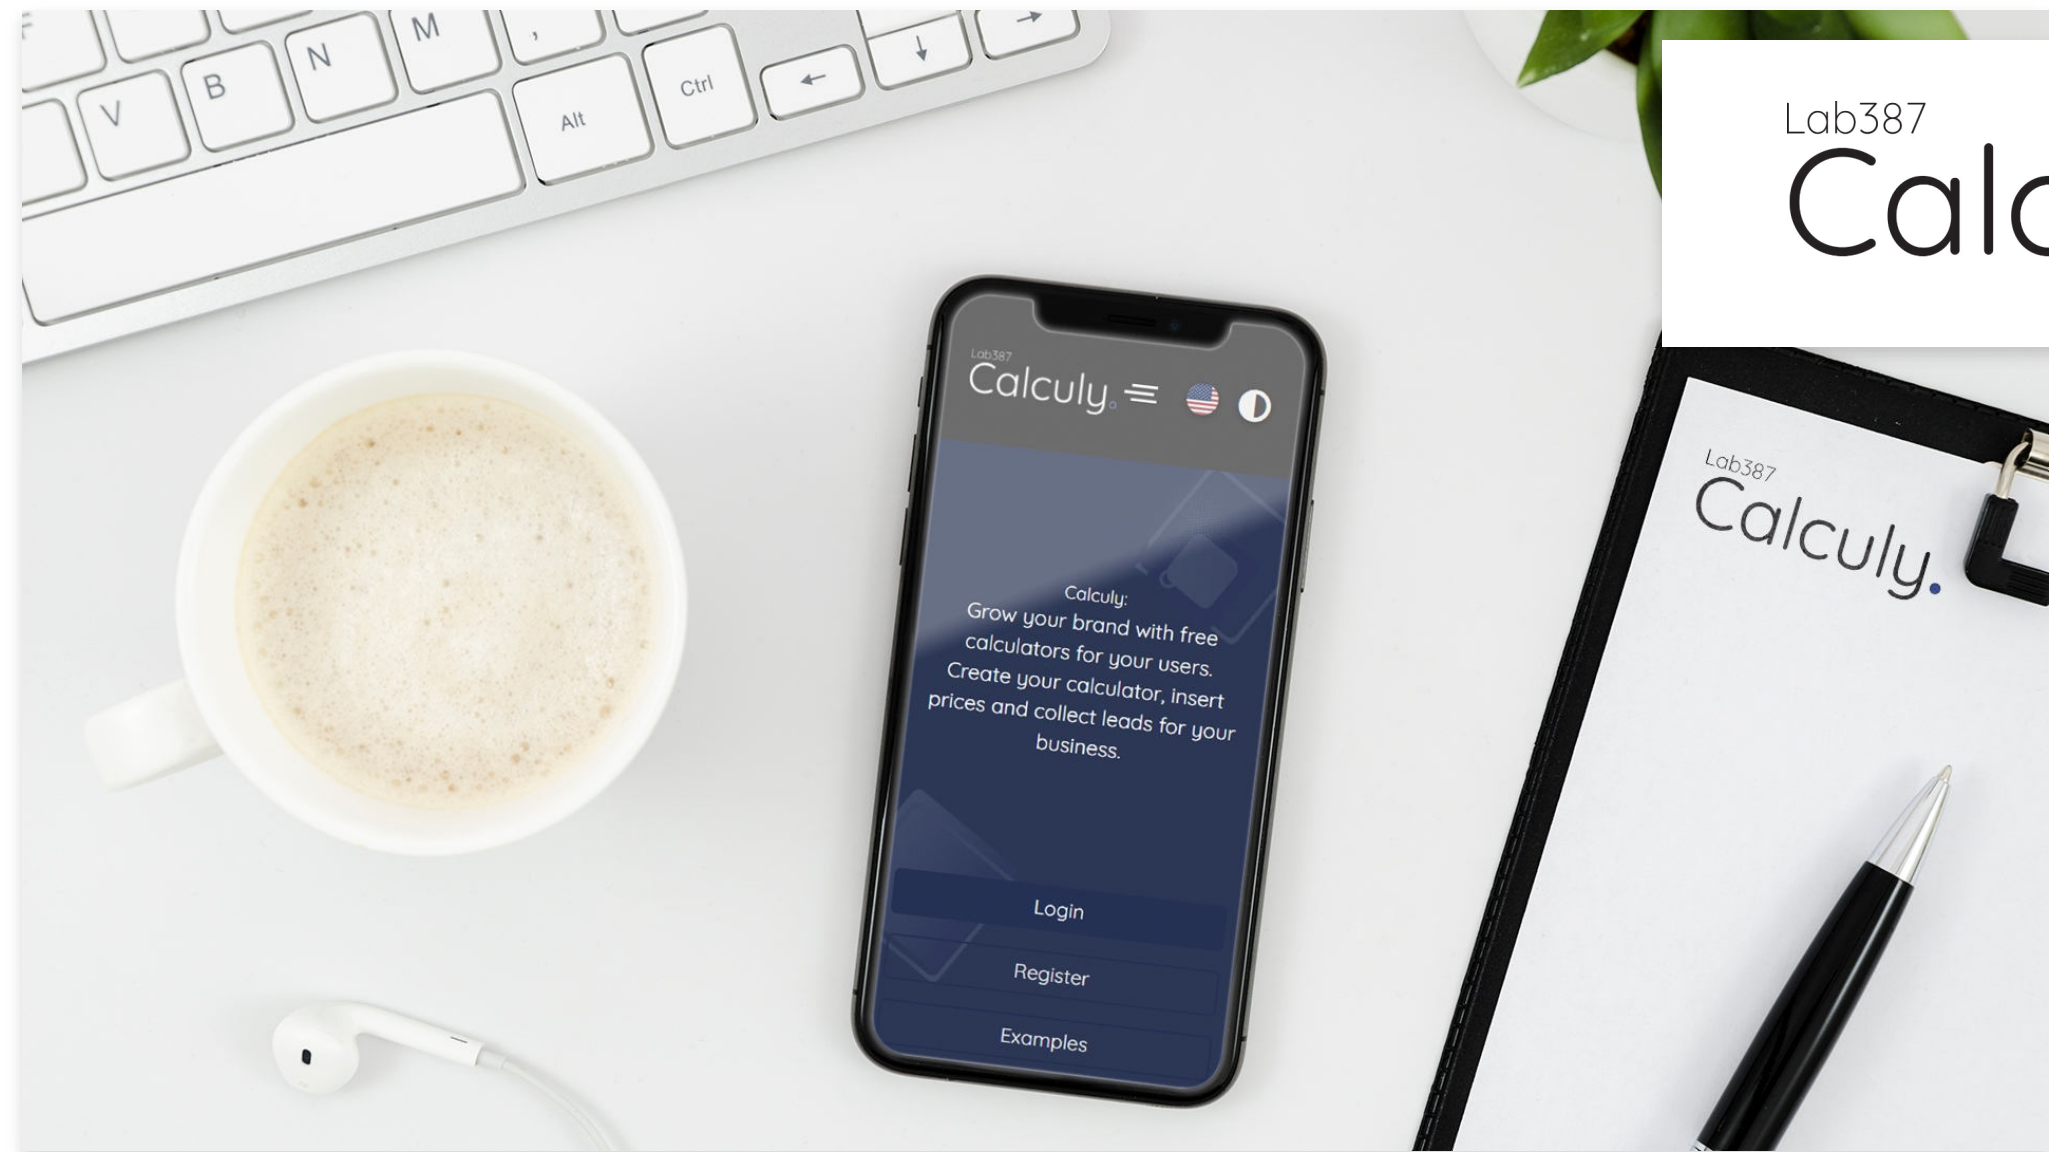

For the needs of our Translately application, we have created a very simple and memorable logo.

The logo is printed in Quicksand font and the name of the company "Lab387" is placed above, which is how we indirectly and directly connected this application with the company.

The point at the end is the visual representation that it is not necessary to look for other applications to create translations for PHP applications, ie that it is simple and tailored to everyone and can work with any type of custom PHP application.

The color inside the dot indicates the selected base color for the application - dark purple.

Lab387
Calculy.

Calculy app

For the needs of our Calculy app, we have created a very simple and memorable logo.

The logo is printed in Quicksand font and the name of the company "Lab387" is placed above, which is how we indirectly and directly connected this application with the company.

The point at the end is the visual representation that it is not necessary to look for other applications for creating calculators and offers, that is, that it is simple and adapted to everyone and that it does not need additional explanations.

The color inside the dot indicates the selected base color for the application - dark blue.

Zoe

ZOE
STUDIO ZA MASAŽU

For the needs of our clients, Zoe - Massage Studio, we have created a simple logo with an element that reminds of the attention and care of their clients through their services.

The word "ZOE" itself is written in a modern and dynamic font, with the use of an additional element within the letter "O".

An appropriate, soothing color was also chosen for the complete logo.

In addition to the word "ZOE", we have added what our clients do (Massage Studio) written in a simple font that fits well with the main part of the logo.

Amaterski Teatar Hadžići

For the needs of the project "Amateur Theater Hadžići" we have created a modern and dynamic logo.

The logo was created in black and white using elements of stage light, the words "amateur theater hadžići" and theatrical masks.

All these elements are put in a circle to connect them into one whole.

This is the first version of this logo, used until the end of 2019 when the theater changes its name and logo, which you can see below.

Teatar mladih Hadžići

After the change of name from "Amateur Theater Hadžići" to "Youth Theater ArtEffect Hadžići", this project changed its logo.

It represents a modified version of the first logo in black and white, where the elements are rearranged, different fonts are taken for the words themselves and the name of the theater is changed.

Also, an element with parchment and a fountain pen has been added, which further clarifies the intention of the project in addition to the existing elements.

DIGITALN
SCEN

Digitalna Scena

For the needs of the project "Digital Stage" we have created a modern and simple logo.

The logo consists of the words "DIGITAL SCENE" and the element of the film strip, and a suitable and modern teal color was chosen for all elements of the logo.

The element of the film strip was selected and created to present the goals of the project - the creation and production of feature plays for digital platforms and short films.

It is fitted around the last letters "A" of both words to get symmetry within the logo.

Apartman Aranza

For the needs of complete branding, in addition to the website itself, we have created a modern and simple logo.

The logo consists of elements of sea waves, palm trees, sun and the name of the apartment in order to better depict the location and their services.

For the colors, we chose blue for the apartment name, which is matched to the colors of the website, light orange for the color of the sun, and darker colors for the waves and palm trees to blend in with the main colors.

Fanex Transport und Logistik

For the needs of our client - Fanex Transport und Logistik GmbH, we redesigned the existing logo.

We took three existing vertical lines and with a small redesign created the letter "F" from them, where we kept the colors and the original idea.

In addition, we surrounded the first element with two semicircles, thus adding ideas of steering wheel, wheel, or transport and logistics within the logo itself.

Only the name of the company "Fanex" is added in the lower semicircle for better recognition.

iMerhaba

For the needs of our client, in addition to creating applications, we have created a modern and unique logo.

The logo itself is reminiscent of the label on the map, which created a general idea of what it is about within this brand, or application - a display of all cultural and catering facilities, carriers and other companies in one place-

The different colors of the elements that make up the structure of the logo just indicate the different categories that can be found within the application.

Čedomir Domuz

For the needs of our client, in addition to creating a website, membership and business cards, we have created an unusual and modern logo.

The complete logo was created by hand, on paper and after the approval of the client was scanned and transferred to vector format and finalized.

Appropriate colors were chosen for the logo elements themselves, as well as elements that represent the goals of the association.

Košarkaši klub Rolling

In addition to the preparation for making wallpaper for the walls and glass of the headquarters of this basketball club, we recreated the existing logo.

This process involves taking an existing logo in a non-editable raster format, and creating an identical logo in a vector format that is ready for later processing and printing in unrestricted formats.

The process is done step by step, element by element, in order to get a true representation of the existing logo.

KUD Mladi Metalac

In addition to the preparation for the production of glass wallpaper for the headquarters of this cultural and artistic society, we recreated the existing logo.

The process was done step by step, ie element by element, in order to get the most authentic presentation of the existing logo.

By agreement with the client, the letters or text within the logo have been replaced with a similar but more modern font.

ASK Radio

For the needs of our client, we recreated their logo, ie we re-created a raster version of the logo in a vector version ready for publication on the web as well as print in unlimited dimensions.

There were no additional changes to the logo, everything was done element by element in order to get the most accurate representation of the existing logo.

Personal Brand Logo

Logo Font-Symbol

This type of logo is a version where a specific font and its thickness is selected for a personal brand, and depending on the job, goal or project of the personal brand, an element is created that represents all of the above, and then merged with the name into one whole.

In this way, we get a unique, simple and memorable logo suitable for any type of use of a personal brand.

Logo Signature

This type of logo is a version where the type of letter, its thickness and size (style of the complete logo) is selected for the personal brand, using a calligraphic approach, and a unique and recognizable logo is created based on the personal brand name.

There is also the option of inserting smaller elements, as in the previous version, within the logo, as well as the job, goal or project that the personal brand deals with in the form of additional words below or above the logo.

Jonathan
Lockheart

Jonathan
Lockheart
yoga instructor

Superheroes Logo

This unique mini-project is another example of logos created within our Logodium project, where we used famous, fictional superheroes and created logos for them as if they were a personal brand, taking into account their superhero names and their main goal, motive, behavior or part of the appearance (something recognizable).

Within the visuals, you can see examples of both variants of the logo: logos with symbols and logos in the calligraphic form of a signature for a personal brand.

Marketing

Within this subsection you can find all the interesting banners and posters / flyers as well as preparations for the wallpaper we worked on, which were created for marketing and advertising purposes.

All projects include a unique design along with copywriting, and very often preparation for the print.

A large number of clients we have worked with on websites or logos have decided to further promote their brand or business in some way, mainly through some type of banner, poster, flyer.

Online Education

DL Course
Development

In Class Education

Below you can see all the educations that were done live, in cooperation with [Link Group company](#).

This long-term, partnership cooperation continues today where we support each other in creating new staff in the field of programming and web design, innovations in the field of education and in practical work with students.

Link Group

4 generations
PHP Development
140 students

4 courses for high
school students
HTML, CSS i JS
140 students

2 generations
Web Design
50 students

2 promo courses
PHP i WordPress
70 students

2 courses for the children
Hour of code
70 students

4 course for the children
Introduction to programming
35 students

Online Education

Here you can see everything we do with our partner company [Link Group](#), and within their [DL platforme](#).

Working on the [Link Group Distance Learning](#) platform means working with students, ie answering their messages and inquiries related to the material, reviewing solutions to set tasks, communicating via eduWall, setting additional tasks and the like.

Link Group

4 generations
MySQL Programming and Administration
1 500 students

2 generations
Frontend Application Development
600 students

2 generations
Core JavaScript Programming
200 students

2 generations
JavaScript Programming
200 students

DL Course Development

Here you can see all the courses we have created for our partner company Link Group on their DL platform.

Each of the programming courses involves the development of a course plan and program with the objectives and description of the course, the structure of modules and lessons and the competencies that participants need to adopt through the course. In addition, a set of lessons was created for each of them, along with a test for each lesson, summary, module tests, videos for each lesson along with the script and a glossary, literature, knowledge tests and additional practice tasks.

All lessons are interactive, containing code examples with explanations and they are focused on practical work and activity, with very little theory that serves as a basis for the work and are on average 7 to 10 pages long A4 format.

Link Group

Frontend Application Development

5 moduls - **24** lessons

Core JavaScript Programming

7 moduls - **15** lessons

Apache Web Administration

7 moduls - **19** lessons

Advanced JavaScript Programming

2 moduls - **19** lessons

MySQL Programming and Administration

4 moduls - **15** lessons

XML/PHP Programming

2 moduls - **10** lessons

Web Security and Cryptography

1 modul - **8** lessons

Object Oriented Programming in PHP

3 moduls - **18** lessons

Building Web Applications (PHP)

2 moduls - **16** lessons

Other Education

IUS

At IUS (International University of Sarajevo), we held a course 98-375 [HTML5 Application Development Fundamentals](#), guided by the official plan and program of Microsoft. The course was attended by **30** participants who acquired the knowledge needed to create HTML5 applications using [HTML 5](#), [CSS 3](#) and [JavaScript](#) technologies.

Classes were held in English.

Faculty of Economics, University of Sarajevo

At the Faculty of Economics, University of Sarajevo, we held a course 98-375 [HTML5 Application Development Fundamentals](#), guided by the official plan and program of Microsoft.

The course was attended by **20** students, while classes were conducted in BHS language.

Students acquired the knowledge of creating HTML5 applications using [HTML 5](#), [CSS 3](#) and [JavaScript](#), and where we mentored students on their final papers in this field for the purpose of taking exams at the faculty.

Obala Gymnasium

For the needs of the students of the Obala Gymnasium from the first to the fourth grade of high school, we held an introductory lecture in [C++](#).

In a crowded classroom, students learned about [C++](#), [Polja](#), [Nizovi](#), [Reference](#) and [Funkcije](#).

We also introduced the students to the work of ITAcademy Sarajevo.

High School of Graphic Arts in Ilidža

For the needs of students of the High School of Graphic Arts in Ilidža, we held a lecture related to the [introduction to programming](#), various areas and ways of doing this work, and we introduced them to the work of ITAcademy Sarajevo.

We were happy to answer various questions from students and professors in order to facilitate their introduction to this professional field.

Other Projects

Within this section you can see some of the different and interesting creative projects we have worked on, which include work on [audio and video materials](#), [production of plays and video content](#) and [graphic and web design](#).

Information Broadcast Agency

The Information Broadcast Agency is one of the beginnings of our work-

Within this agency, we worked on graphic design as well as the design and development of the website itself.

In addition, we were involved in filming events as well as interviewing, and processing and producing video material on the Youtube channel: [Information Broadcast Agency](#).

In addition to working on these jobs, we also worked on running an online youth radio channel and all popular social networks.

Original team members:

Ivana Aranza	Armin Bečić
Amar Bešlija	Maid Đelilović

ArtEffect Youth Theater

ArtEffect Youth Theater is one of the largest projects in which we have dealt with various segments in the field of design, audio and video production, play production and writing.

With over **25** members of this youth theater, we wrote, produced and directed **4** plays, prepared **3** more plays to perform, held over a hundred rehearsals, and for each of the plays we designed posters and invitations, recorded and photographed and produced recordings of the play itself.

For certain plays, we also produced video material in the form of promoting the play before the premiere.

We created and ran all the popular social networks together and did Facebook and Instagram advertising for the purpose of promoting the show.

Various Projects

[Amkoshop.ba](#)

Detailed analysis of the website in terms of design, UX experience, security and functionality, and report writing.

[Abtransferbh.com](#)

Development and integration of a web application for managing passenger transfer reservations.

[Bikefinder.de](#)

Work on a database of 15,000 users and bicycles, consulting in the development of website / application functionality.

[Elox-bh.com](#)

Creating a website with customizing and entering material from the old website.

[Blog.domacin.ba](#)

Creating and editing a website, record informative videos, editing and publishing articles.

[Igraonicaosmijeh.com](#)

Consulting in the website development.

Ajnex.com

Consulting in the website development.

Dijamant.ba

Preparation of materials for the website and basic design.

Mladimetalac.com

Development of an informative website about the KUD.

Stromatik.com

Creating and editing a website together with all text, photo and video materials.

GlobalGPS BH

Creating a web application for managing applications for internships within the company.

Contact

If you came to this place, it means that you have reviewed our complete portfolio! Thank you for taking the time to look at our contributions in the areas of web, design and education.

If you liked what we do and how we do it, feel free to contact us so that we can help you solve your problems and become part of our family.

Talk to you soon!
